> and building. Immediately a not-very-friendly guy started walking towards their truck. He was yelling and gesturing for the hams to stop taking pictures and go away. Langer and Stark beat a hasty retreat.
>
> Now here`s the real kicker. The ham radio T-hunters found the interfering transmitter at about 2:30 in the afternoon. The signal went off the air around 5:30 that evening and has not been heard since. Langer suggests that the origin was a contractor`s employee having having a little fun on the radio. Obviously his or her superiors got the message that ham radio operators do not consider interference to their spectrum to be something to enjoy.
>
> For the Amateur Radio Newsline, I`m Evi Simons, reporting.
>
> A few other notes. Langer says that about 5 minutes before he and Stark located the exact source of the interference, a pickup truck had passed them as they were parked and taking a bearing. He thinks that the driver must have told someone at the facility that they were being hunted. He also expresses his belief that the signal was from some kind of automatic link radio. Also that the data burst was information, and that someone had recorded the Yosemite Sam clip where call letters would normally go.
>
> You can take a look at what the two hams saw on the web site for the project. It`s at http://www.laguna-industries.com/Lines_of_Business/MATIC_Center/matic_center.html or at http://www.rdecom.army.mil/rdemagazine/200408/itl_mosaic.html
> (K5FSB via Amateur Radio Newsline� Report 1438 - March 4, 2005 via John Norfolk, dxldyg)

As an aside to this there was also another group looking for the transmitter site at the same time.

I believe they came upon the site after these two left, which may have some bearing on the matter.

I think the two different groups have compared notes after the incident was over.

Looks like Sam WAS a government operation after all. But I don't know
why the government put it in the middle of a ham band.

Are you saying that the SAT 800 is more sensitive than the 7600GR?

Well maybe not... read it again! It may have indeed come from a government site,
however, it may not have been run by the government itself.

Radio Farda (US propaganda service to Iran) heard with S9+10 signal on 15410 at 1650. Sign off at 1659-abrupt cutoff of music, replaced with DW African service from Rwanda. Passport says the Farda signal on 15410 is from the UK, which is probably why it comes in so well in California. This may be the best time for West Coast USA DXers to hear Farda-apparently it's on this freq from 1400 to 1700, or 6-9am Pacific Time. Noted with Iranian pop music-suprisingly European sounding! Radio is FRG-8800 with 50 foot longwire.

Looks like Sam WAS a government operation after all. But I don't know
why the government put it in the middle of a ham band.

Radio Farda (US propaganda service to Iran) heard with S9+10 signal on 15410 at 1650. Sign off at 1659-abrupt cutoff of music, replaced with DW African service from Rwanda. Passport says the Farda signal on 15410 is from the UK, which is probably why it comes in so well in California. This may be the best time for West Coast USA DXers to hear Farda-apparently it's on this freq from 1400 to 1700, or 6-9am Pacific Time. Noted with Iranian pop music-suprisingly European sounding! Radio is FRG-8800 with 50 foot longwire.

Sorry-newsreader problems. My newsreader kept timing out while sending
the message, and marking it as unsent. So I kept sending it, not
realizing that it was going through. Apologies to the group.

I'm having a problem with my newsreader-it keeps timing out on messages and marking them as unsent when in fact they have been sent. I didn't realize this until just now. That's why my post on Radio Farda appears four times, and my response to dxAce's post on YS appears twice. I apologize for cluttering up the newsgroup with unnecessary posts-this is my computer's (or possibly my news server's) fault.

No problemo. I think we've all hit that snag at one time or another.

Who needs that stuff?  You can use generic DSP boxes to build modulators
and demodulators.  In fact, you can build a complete IF strip with a
combination of software and an inexpensive DSP.  Combine that with a front
end of your choice and you have a pretty swanky receiver.  Use the same DSP
along with an upconverter stage and an RF amp and you now have a transmitter
too.

Old VCRs and cellphones are an absolute goldmine of nifty RF parts!

Thank you all for the info... I'm going to put up a Wellbrook loop on a
rotator in the spring.  It should be interesting to see how that helps.

Thanx again, all !!!!

Hi there all, and '73

I've been working on an on-line forum for people who enjoy short-wave listening, general recieving, scanning, Ham, police/fire etc. etc.

The forum is not completely ready, but fully functional and updated every day. Complete with a couple of nice skins etc. Feel free to drop in and make a post.

Visit the forum at: www.globallistening.tk

Thanks for your time.

Shaggy, forum Admin.

Wrong.

The problem was that the guy was nuts. He was feared by his neighbours and disowned by his family, including his father, who have had next to no contact with him despite living only a few miles away. He had a number of convictions and had already spent some time in jail.

That is the VERY FIRST THING I thought of, Terry. Here he's a bitchin'
and a moanin' 'bout the TT, now he's goin' after "Mighty Fine Junk"!

(The TT just can't buy this kinda free publicity!  Keep it up, CuHu!
We haven't sold this many IN YEARS!  To be honest, it was getting a
little boring assembling these dipoles every day for the hammies.
You've given me a very nice change of pace in the work shop.)

I quit rrs shortly before 9-11.  It was taking on the appearence of
rec.radio.amateur.misc.  Same people, same crap.  But I'll admit this,
the TT threads have gotten some of the trollers and jokesters BACK on
topic: SHORTWAVE!

I have never really understood the concept of killfiles.  I mean, when it comes to radio....we seem to want to WALK ON TOP of the other fella when he/she makes you mad. We jam the living crap out of the person or subject we don't care to hear.

A Killfile just sounds like the opposite.  Instead of jamming, we're just turning our "receiver" off.

So I'm suppose to be upset when you turn your receiver off and type: <PLONK>?????  I could care less!  Everybody else is participating but the killfilers!

Another thing: Do you REALLY believe these people killfile all of this fine subject matter in here???  Of course not!!  They're here because they WANT to be a part of the madness that is rrs!  If they were looking for order and civility....they would go to yahoo-groups....or something even more wishy-washy.....

Best o' 73,
Bill - WA8MEA

LOL .... I'm pi$$ing myself over here... "I fuc*ed up and bought one of those ..." LOL ... Your a poet, man...

I wonder if the Tiny-Tenna would perform any better then the first home brew antenna I made when I was in grade school. I took a plastic laundry basket and covered it with aluminum foil so that it looked like a demented satellite dish. Then I used a wire to go from the foil to the whip antenna on this old beat up Zenith SW radio that was collecting dust in the basement. I bet that my laundry basket antenna was better then the Tiny-Tenna... LOL... Man... I wish I had a photo of that antenna. It was a thing of beauty...

Michael

Hiya... I dont think there is really any way to isolate what the noise source is... I think there are too many of them.. Houses here are close together and there are power lines all over the place.  Noise could pop up for any of a hundred sources.  I'm going to try a Wellbrook  330S loop on a rotator.  I'll put a mast up on the roof and rig it all up in the spring. It probably will help given that the Wellbrook  330S seems to be known as a very good antenna for noisy areas.  I think that may be my best option other then moving out of the area...  I hear a lot of good things about Arizona :-)

Thanx again !!!

Michael

Just to alert you: Some folks wanted me to start up another contest. So tomorrow night, we will!  Prize will be, a Tri-Di-Pole antenna. (Sorry, CuHu...no TinyTenna this time around....)

11:30 PM Eastern: DX Radio School.  Although we don't always babble about DX....and we don't always babble about radio.  But just like school USED to be, we all do learn a little something.

It will be an interesting entry; more to do with AM/FM "oldies" music. But our show discusses all aspects of radio.

Other topics will be the new Sangean PT-80 and the low power FM "monopoly" corporation here in Michigan that's buying up all of the available low power FM available frequencies.

We welcome you to tune in to the ENTIRE techno-block of programming on Saturday nights: WWCR - 5.070 megs....along with Glen Hauser, George and Adam, Radio Weather, DX Partyline and more!

73, Bill - WA8MEA
Mr. TinyTenna Fitness America - 1980
(No steroids used....)
TinyTenna, Michigan, USA
(Just west of the University of
TinyTenna - Home of the nations
largest football stadium!)

Well,Mr.Tiny Tuna Tenna,I am expecting my check in my snail mail any day now for all of my free advertising about those worthless Tiny-Tennas.I bet a metal Tuna Fish can would make a far better Antenna than those dip poles you are messing around with.

>             trace down some

> interference on the 75 meter band, they had no idea that they may have been entering a world of spy versus spy. Or should we say hams versus spy. Here`s more:
>
> On Wednesday, February 16th, Mike Stark, WA5OIP and Mike Langner K5MGR set out to locate some annoying interference on 3.700 MHz, a signal that had been on the band since last December.
>
> The interference manifested itself as a digital data burst followed by an audio clip from a Yosemite Sam cartoon. Nope. I am not kidding you. Each transmission ended with the famous line where Sam says:
>
> Actual interfereing audio: (data buss followed by) ``Varmint, I`m agonna blow you to smithereenes...``
>
> The interference came on for just a few seconds at intervals of just under 2 minutes. The fact that Yosemite Sam was loud and clear told the Stark and Langer that the interference was intentional and not simply a transmitter gone bizzerk.
>
> Using Stark`s mobile installation the pair quickly found that the signal grew stronger as they headed West. They then shifted to a Potomac Field Intensity Meter with a shielded loop antenna. Using this gear they located the offending transmitter at the MATIC facility on the Laguna Indian Reservation. MATIC is an acronym for the Mobility Assessment Test and Integration Center. This is a military facility used to develop advanced battlefield communications systems and not generally known to the public.
>
> The two hams dove up to the building. At no time did they leave the public highway. Langer began taking pictures of the towers, antennas, and building. Immediately a not-very-friendly guy started walking towards their truck. He was yelling and gesturing for the hams to stop taking pictures and go away. Langer and Stark beat a hasty retreat.
>
> Now here`s the real kicker. The ham radio T-hunters found the interfering transmitter at about 2:30 in the afternoon. The signal went off the air around 5:30 that evening and has not been heard since. Langer suggests that the origin was a contractor`s employee having having a little fun on the radio. Obviously his or her superiors got the message that ham radio operators do not consider interference to their spectrum to be something to enjoy.
>
> For the Amateur Radio Newsline, I`m Evi Simons, reporting.

```
>
>            A few other notes. Langer says that about 5 minutes before he and

I think they should design a REAL portatop, something along the lines of the Sony 2010, about the 2010's size but packed with tabletop features. Considering what they've done with the 1102, and how far technology has advanced since the heyday of the 2010, they could make a 2010 size portatop but with the features of the best tabletops, including making it DRM ready, AND putting in FM stereo that covers ALL world FM bands, including Eastern Europe, Japan, and US-that would be about 66-108 Mhz. Hell, they could put in TV sound covering all TV channels in the world. Throw in world weather bands too. Make it able to receive ELF radio signals, down to 10 khz or so. Why not dream big?

I know a guy (Michael Smith at Army.mil) who was in Vietnam with me in 1964 and he is from New Jersey.He once said he escaped New Jersey and never looked back.One time at Tan Son Nhut www.tsna.org I says to Michael,I says,Michael,let's catch that Navy shuttle bus to Saigon and get us some wimmins.At first he didn't want to go but I talked him into it.We caught that bus and went to Saigon.He went to a bar and drank beer,I went and found me a woman.A couple of years ago we were emailing back and forth with each other untill I reminded him about that time he backed an Army truck into one of those tall wooden poles that had those lights up there on top of that pole and he knocked that pole flat on the ground.He never did email me anymore after that :{)

There are illegal aliens coming across our borders from Mexico to
Arizona and California and New Mexico and Texas and they might steal
your Wellbrook antenna and anything else that isn't locked up or nailed
down.There are drug wars going on along our Southern borders too.There
is lots of wide open areas here in Mississippi.And we have very mild
winters here too.My front yard needs mowing already.

>>>HAM VS. SPY (RADIO)
>>>
>>>             ...When a pair of New Mexico hams decided to
>>>             trace down some
>>>             interference on the 75 meter band, they had
>>>             no idea that they may
>>>             have been entering a world of spy versus spy.
>>>             Or should we say hams
>>>             versus spy. Here`s more:
>>>
>>>             On Wednesday, February 16th, Mike Stark,
>>>             WA5OIP and Mike Langner
>>>             K5MGR set out to locate some annoying
>>>             interference on 3.700 MHz, a
```

>>>           signal that had been on the band since last
>>>           December.
>>>
>>>           The interference manifested itself as a
>>>           digital data burst followed
>>>           by an audio clip from a Yosemite Sam cartoon. Nope. I am not kidding
>>>           you. Each transmission ended with the famous line where Sam says:
>>>
>>>           Actual interfereing audio: (data buss followed by) ``Varmint, I`m
>>>           agonna blow you to smithereenes...``
>>>
>>>           The interference came on for just a few seconds at intervals of just
>>>           under 2 minutes. The fact that Yosemite Sam was loud and clear told
>>>           the Stark and Langer that the interference was intentional and not
>>>           simply a transmitter gone bizzerk.
>>>
>>>           Using Stark`s mobile installation the pair quickly found that the
>>>           signal grew stronger as they headed West. They then shifted to a
>>>           Potomac Field Intensity Meter with a shielded loop antenna. Using
>>>           this gear they located the offending transmitter at the MATIC
>>>           facility on the Laguna Indian Reservation. MATIC is an acronym for
>>>           the Mobility Assessment Test and Integration Center. This is a
>>>           military facility used to develop advanced battlefield
communications
>>>
>>>           systems and not generally known to the public.
>>>
>>>           The two hams dove up to the building. At no time did they leave the
>>>           public highway. Langer began taking pictures of the towers,
antennas,
>>>
>>>           and building. Immediately a not-very-friendly guy started walking
>>>           towards their truck. He was yelling and gesturing for the hams to
>>>           stop taking pictures and go away. Langer and Stark beat a hasty
>>>           retreat.
>>>
>>>           Now here`s the real kicker. The ham radio T-hunters found the
>>>           interfering transmitter at about 2:30 in the afternoon. The signal
>>>           went off the air around 5:30 that evening and has not been heard
>>>           since. Langer suggests that the origin was a contractor`s employee
>>>           having having a little fun on the radio. Obviously his or her
>>>           superiors got the message that ham radio operators do not consider
>>>           interference to their spectrum to be something to enjoy.
>>>
>>>           For the Amateur Radio Newsline, I`m Evi Simons, reporting.
>>>
>>>           A few other notes. Langer says that about 5 minutes before he and
>>>           Stark located the exact source of the interference, a pickup truck
>>>           had passed
>>>           them as they were parked and taking a bearing. He thinks that the
>>>           driver must have told someone at the facility that they were being
>>>           hunted. He also expresses his belief that the signal was from some
>>>           kind of automatic link radio. Also that the data burst was

```
>>>           information, and that someone had recorded the Yosemite Sam clip
>>>           where call letters would normally go.
>>>
>>>           You can take a look at what the two hams saw on the web site for the
>>>           project. It`s at
>>>           http://www.laguna-
>>>           industries.com/Lines_of_Business/MATIC_Center/matic_center.html
>>>           or at http://www.rdecom.army.mil/rdemagazine/200408/itl_mosaic.html

One that will pick up Monticello,Mississippi real good from
Jackson,Mississippi (I live in Jackson) with no fading in and out.Y'all
build such a radio as that at a resonable price and I will buy it.And
don't stick a Tiny-Tenna on there either,Tiny-Tennas do NOT work!

I own a weird looking old Zenith antique antenna I bought at the Flowers Fleamarket years ago.(Flowers is ten miles East of Vicksburg,twenty seven miles due West of my doggys couch) It is made of cardboard (or something like that) and it has the Zenith name on it in big letters and lots and lots of fine wire on the outside of it.It is rectangular shaped and taller than it is wide.It isn't for sale,I like my old junk.

Say what you want about Rush's political views, at least he's not a
Konspiracy Kook or a bible thumping fundamentalist preacher.

You won't laugh when the fire comes roaring down the hill and totally destroys your home, all your belongings, your pets, and possibly you. Want to see what it looked like --- URL:
http://www.karlgrobl.com/Photojournalism/Fire/page1.htm

http://www.scrippsranch.org/special/fire_gallery.asp

In California more than 743,000 acres burned by Monday 11/03/03, these hellish fires caused 24 deaths & destroyed more than 3,570 homes. Read that again  --- 3,570 homes and 24 deaths.

I had friends die in that fire.

Hundreds were evacuated as the smoke was so bad breathing was difficult all over the county.

The hospitals were loaded with COPD patients.
The smoke also carries metallic particles-- many suffered long after the fires.

The football stadium and red cross shelters was filled with fire refugees. Amateurs brought food and water to those areas.

Livestock was roasted in their tracks some were rescued by Amateurs.

One couple took the wrong turn and died. Amateur Radio could have told them the right escape route.
Their cellphones were out, the telephone lines were toasted.

Amateurs were a valuable asset heralded by civil authorities and the press.

RACES and ARES was out in full force, a Repeater information net served
hundreds who needed information on road closures,
evacuations, shelters, health and welfare and much more.

We are proud to have served.
Hope you are as well prepared as you are stupid.

Having a good time in the middle of a ham band is not advised. That
said, we ARE talking about the US government, which can't stand
independent thought of any kind by anybody.

Bullsh*t.   Some here would actually like this to be a shortwave group
again, instead of the political wack-job it's become.  This place used to be
an extremely vaulable shortwave resource, especially for beginners.  Many of
those whose who provided that expertise have left because of the trash
talking.  Killfiling is one way to dump the worst offenders.  Unfortunately,
most of them just pop back up under a new IP.

Actually a killfile is used by those who dont want to waste thier mouse
clicks to erase the drivel that needs to be erased in the first place.

Including myself but It's been this way for the majority of it's existance. There are differances in people Brian and not all of us need a killfile. Getting upset about it is useless. Theres allway people that we don't like or agree with and those that just like to stir shit. Be thankful we have many resorces online to choose for info and this still isn't too bad and it keeps on living.

B.H.

New film highlights 1st AD's Iraq mission

By Terry Boyd, Stars and Stripes

European edition, Tuesday, December 14, 2004

BAUMHOLDER, Germany � Filmmaker Michael Tucker is perplexed.

The Berlin-based documentary maker asks why America doesn�t seem to care about the Iraq war or the American soldiers who are fighting it.

America, he says, has lost interest in the war and turned the channel to �Survivor� and �American Idol.�

�My friends say, �You�re obsessed with this war,�� Tucker said in a telephone interview from his Berlin office. �I say, �How can you not be?� The American people have no idea what life is like for these soldiers.�

Tucker, a Seattle native, has channeled his obsession into �Gunner Palace,� the first feature-length film about the Iraq war; a film that he says is from the perspective of the soldiers themselves.

It�s a film that may do for the 1st Armored Division�s 2nd Battalion, 3rd Field Artillery Regiment � nicknamed �Gunners� � what HBO�s �Band of Brothers� did for Easy Company of the 101st Airborne Division: Make them into American icons.

The movie is set to open Feb. 11 in six U.S. markets, then expand the following week to 15 markets. Tucker said he hopes to have pre-release screenings next month at major U.S. posts, such as Fort Bragg, N.C., and Fort Drum, N.Y., but those plans are not yet complete.

Tucker spent a total of two months between September 2003 and April 2004 living with the unit at what soldiers call �Odai�s Love Shack,� a partially bombed-out palace on the Euphrates River where Saddam Hussein�s son, Odai, brought paramours for trysts.

The regiment set up headquarters at the palace complex, which they nicknamed �Gunnerland,� while patrolling Al-Adhamiya, one of the most volatile sections of Baghdad. Tucker accompanied soldiers on countless missions and simply hung out with the troops. He said that left him with a sympathetic view of his soldiers that strongly runs counter to an image colored by soldiers� abuses of Iraqi captives at Abu Ghraib prison.

�I tended to give soldiers the benefit of the doubt,� he said. �They didn�t �sandbag� detainees (place sandbags over their heads). It shocked me you didn�t see rougher treatment of detainees� given the constant threat level.�

He did see, over time, mounting frustration among troops over the language barrier, and the fatigue of working nearly around the clock.

�It�s a bunch of 20-year-old kids who just want to survive,� he said.

Gunnerland was a world between the reality of raids and attacks and the �real� world via the Internet, phones and the media, Tucker said. There were the funny moments, when soldiers would pull up to find suspects conveniently waiting to be caught, and darker moments when the U.S. troops rammed Humvees into houses, only to find out they had the wrong targets, he said.

Tucker said his goal is to show Americans � without being voyeuristic, political or patronizing � a world that he finds inspiring and terrifying.

He quotes one of the men he calls �soldier/poets:�

�It�s like (Spc.) Richmond Shaw said � �For y�all this is just a show, but we live in this movie.��

Tucker and his partner, Petra Epperlein, have shown �Gunner Palace� at the Telluride Film Festival in Colorado and the Toronto Film Festival in Canada to enthusiastic reviews.

It is, said Tucker, art out of pain.

It was painful getting to know and respect soldiers and officers such as Sgt. Maj. Eric F. Cooke and 1st Lt. Ben Colgan before they died in separate attacks, he said.

After that, he said, he couldn�t make �something rah-rah.� But neither could he make a film disrespectful of soldiers. Tucker said: �I most like that it shows them being them.�

Tucker succeeded in keeping the film �apolitical,� said Jon Powers, 26, a former 2-3 Field Artillery captain, now a schoolteacher in Buffalo, N.Y.

�It�s a great movie � for soldiers to see, and � for their families and friends to see if they want to understand what we went through for 14 months,� said Powers, who saw �Gunner Palace� at the Toronto Film Festival in September.

The film is, he said, an accurate depiction of daily life made by a filmmaker given extraordinary access by Lt. Col. Bill Rabena, the battalion commander. Attempts by Stars and Stripes to reach Rabena were unsuccessful.

�People always ask me if there was censorship; if I had trouble getting access and all those issues,� Tucker said.

Instead, he said, he had unrestricted access to soldiers in their off hours, to all missions and even to interrogations of suspected Iraqi insurgents. �They embraced your being there,� Tucker said. �People just want their story told.�

Whether the regiment�s soldiers will be able to go to the local base theater to watch themselves on the big screen remains unclear. Army and Air Force Exchange Service executives say that�s unlikely, unless a major distributor with whom AAFES has a contractural relationship picks up the film, and it goes into wide release, said Judd Anstey, media branch manager at AAFES headquarters in Dallas.

Viewers should be prepared for what Powers calls �some down-and-dirty� footage, including a scene where soldiers are �playing guitars and basically hanging out,� a peaceful moment interrupted by a mortar attack. �But once (the audience) gets over the shock, it will get a conversation started. � The guys who went with me to see it said, �Is that what it was really like?!� � I said, �Yeah.��

Really, you can routinely pick up an FRG100 for $300.00.  Whatever floats your boat I guess.

About as silly as paying almost $700.00 for this Zenith...absolutely
amazing what people will pay for a simple radio!!!  Actually the frog
is probably a better performer...this one is amazing!

( OT, BTW)

reviews here..

http://www.rottentomatoes.com/m/gunner_palace/

& SINCE we're off topic,

2 films..

1:) Sideways.. Funny .. really funny...

2:) Million Dollar Baby..

this film just connected.. Gritty atmosphere..Great Fight Scenes...

She apparantly worked out 4 hours a day for weeks to get in shape for the film..

Great story.. Morgan Freeman can do no wrong..

- But you might want to just get up & leave before the ending...

Nope.  I just remember when I left a couple of years ago, announcing a killfile was the big thing.  Then, today, I noticed a new rrs subject mentioning a killfile once again.  So this practiced hasn't changed in over two years and it made me curious once again.

Maybe I need to elaborate: What is the deal with MENTIONING the <PLONK> in the first place???? To me, it's nothing more than someone announcing on 14.313 that they're now turning his/her radio off...hah hah...nah nah...take that.  And the rest of 14.313 is suppose to be all po'ed at the guy who turned his radio off on them.  Makes no sense!  So what?

Just looking for some elaboration.....
That is all......

I used to post my "speed logs" all the time... For the most part, there was nothing all too interesting about my speed logs because I was just listing the "big boys"... No surprises.... Ya know ??? So... For now, I only post the odd stuff I come across...  Problem is, I cant hardly ID all the odd stuff... I'm always picking up stuff from Central and South America that I cant ID using the lists I have... Especially between 7:00 and 10:00 UTC. Great time to hear all sorts of odd stuff here... Problem is....When I ask for help or info ID'ing a questionable signal, I get some arrogant self important DX JACK-ASS telling me to learn how to use my radio....

Michael

Did they ever figure out who hooked the lightning rod to it?  :)

One of the funny things I remember from a couple of year ago, was how a
bunch of people started to immitate Llyod.  They were able to duplicate
his screen name & e-mail address.  It got to the point NOBODY knew who
the REAL Lloyd Davies was anymore!

Has that changed?  Or can you pick the real Lloyd out from the
crowd????

Actually, if a signal isn't beamed to my area I consider it to be DX. Even if it is VOA. I hear a lot of Asian domestic SW from here in California, and rely on the lists to tell me what I'm listening to because I can't decipher Chinese much less Laotian (the Radio Free Asia log I had). I AM disappointed that I can't seem to hear anything from the Middle East here, considering how "hot" that region is in political terms. I used to be able to hear morning prayers and Quran readings live from Saudi Arabia on 15170 after 0300, but not now. I've NEVER heard Iran in English, which I'd like to (my only log of them is in Farsi). If you look at my log that I recently posted, you'll see VOA and RN and RA and the big boys, but you'll also see CNR in Uighur (according to Passport, where DO they speak Uighur anyway?) and RFA in Laotian (only heard them in Chinese previously). And you'll see Indonesia and other Asian countries that you just can't hear on the east coast. (Similarly, I usually can't hear Africa.) I'd love to listen between 0700 and 1000 but I'm asleep then, it's the middle of the night in California. As for South America, transmitters change hands often down there and the station names change too, so don't be surprised if you can't ID something in Spanish. Fortunately, you can learn some Spanish at your local community college, which will help you ID these stations.

First, for the conspiracists, look, it's actually 6660 upside down. Very ominous.

Anyway, listening to 9.985 today, I experienced quite a bit of interference from 9.990. Has this station been on the air long? From a cursory search on Google, it seems like it was an Egyptian station, but I didn't spend much time researching it. The time was around 1800 UTC.

Later this evening, I again crossed through 9990, and it sounded like Arabic, the singing the prayers stuff where one could picture a man standing in a tower with a loud speaker addressing scads of kneeling men.

Anyway, this time was about 2230 UTC, and the prayers were being sung, with English translation of each segment following. Being that I am Christian, I didn't linger for very long (lack of interest), but when I again came back to the frequency at 2245 UTC, the station was nothing but a hideous heterodyne sounding whine. Of course, I believed that the station was being jammed (I don't know jack about jamming). Anyway, I listened until 2300 UTC, and the carrier and whining sound dropped entirely.

Apparently, this was being broadcast by the station itself, but why? Foul up, (mistake), technical failure, some other abstruse reason?

Any comments on this issue? Any experience with this station concerning interference. Today wasn't exactly a stellar propagation day, so I don't know if I see this problem again or not.

Dr. Artaud

Also, for the news hounds,
http://reuters.myway.com/article/20050304/2005-03-04T223406Z_01_L04539736_RTRIDST_0_NEWS-IRAQ-DC.html

The 57 year old Italian Female Journalist that was captured and tormented by the Iraqis, filmed writhing in agony asking for the Italian army to leave Iraq as a condition for her release, was finally released by her tormentors.

U.S. forces in Iraq mistakenly opened fire on the convoy taking her to safety, wounding her and killing an Italian secret service agent.

How come this is so predictable?

Well people that anounce the so called PLONK are doing so in hopes of offending or getting back at the person that offended them by posting off topic or whatever? It's like the Na! Na! Na! Na! Na! and stick your tongue out thing some kids did in kindergarten.

B. H.

I used to hear VOIRI in English regularly.  I don't remember the time slot, but I think it was either 6:30 PM EST or 7:30 PM EST.  I remember that because that was when I got home from work at night and it was always on. It was about three or four years ago.  For what ever reason, if I what I heard was what I thought was what I heard, they switched from English to Spanish for that time slot and I gave up on it.  From what I remember, It was a heavy duty propaganda rag....  I'm sure there is some one here that knows the exact time slot I'm talking about and whey they Switched to Spanish and why...

Michael

(I betcha he didn't!  Just watch.....)

Hey!! Denley!!

You are SO stupid, you invested in a solar powered flashlight company!!

In fact, you are SO stupid....you probably didn't even understand the
above joke!!

Denley is SO stupid, he sold his car for gasoline money!

Denley is SO stupid,  he tried to put M&M's in alphabetical order!

Denley is SO stupid, he could trip over a cordless phone!

Denley is SO stupid, he took the Pepsi Challenge...and chose Jif!

Denley is SO stupid, that under "Education" on his job apllication, he
put "Hooked on Phonics."

And finally; Denley is SO stupid....that when he wathces "The Three
Stooges"....he takes notes!!!

Like it or not, many talented members of this hobby have left this NG for good and for one reason: The namecalling, political BS that now passes for conversation on this NG. If that's your favorite sport, there must be hundreds of newsgroups where people rant all day long about everything. Why hijack this group for that purpose?

Look I'm not important, and I can go elsewhere.......but there used to be lots of international goodwill and dialogue here and tremedous help for newbies. Now it's anti-canada, anti-this, anti-everything. The conversation now is about as immature as I have ever seen here. KIllfiling cross-posters and those who never post shortwave is a great way to at least make the conversations seem more civil. (Unfortunately the Lauterbachs of this world keep changing their IP and showing up again 5 minutes later).

> Anyway, this time was about 2230 UTC, and the prayers were being sung, with English translation of each segment following. Being that I am Christian, I didn't linger for very long (lack of interest), but when I again came back to the frequency at 2245 UTC, the station was nothing but a hideous heterodyne sounding whine. Of course, I believed that the station was being jammed (I don't know jack about jamming). Anyway, I listened until 2300 UTC, and the carrier and whining sound dropped entirely.
>

>
> Dr. Artaud

9990 is indeed Radio Cairo, broadcasting in several different languages to Europe at that time, according to Passport. I know you're Canadian, so depending where you are in Canada this could be a very good logging, especially considering the poor conditions. According to Passport, this particular broadcast goes off the air at 2245 or so, so you could have just heard them powering down their transmitter. Considering that Egypt is infamous for modulation problems, it doesn't surprise me that powering down their tx involves a massive heterodyning. Somebody else in the group mentioned that WWCR's 9985 freq was being interfered with. I'll have to tune in tomorrow and see if I can hear this station.

Any number of other radio services could have "told them the right escape route". Back when I was a little kid, in the 1970s, every car carried an emergency CB radio. This was for communicating to others in the event of an emergency of any kind, or to be used like cell phones and FRS walkie talkies are used now. They worked pretty well, but by the mid 80s Emergency CB was dead, primarily because lack of interest in CB after 1980 had lured all the weirdos to the medium, and the bands had become useless. If you want to make the case for amateur radio disseminating info to the public in an emergency, support the SW hobby broadcasting movement. Radios could easily be made that cover any "hobby broadcasting bands". Licensed hobbyists would be able to run emergency info stations at a time like you recount, and people could contact them through any way possible, including through traditional amateur radio, to give them emergency info to broadcast. In everyday life, the hobby broadcasters would be an important info source, sort of like an on air blog. This would break the corporate conglomerate grip on the media. What good is amateur radio if the only thing you're allowed to discuss is CQ's and "my radio is better than yours"?

 used to hear VOIRI in English regularly.  I don't remember the time
slot,
but I think it was either 6:30 PM EST or 7:30 PM EST.  I remember that
because that was when I got home from work at night and it was always
on. It
was about three or four years ago.  For what ever reason, if I what I
heard
was what I thought was what I heard, they switched from English to
Spanish
for that time slot and I gave up on it.  From what I remember, It was a

heavy duty propaganda rag....  I'm sure there is some one here that
```

knows
the exact time slot I'm talking about and whey they Switched to Spanish
and
why...

Michael

Michael,

Try listening on 6120 khz at 8:30EST. VOIRI comes on then and
broadcasts in English for about an hour. Their start time can be
irregular, though. Over the last couple of weeks, I've heard them start
ten and even fifteen minutes late. Sometimes the broadcast ends
abruptly as well. Still, they occasionally have a very strong signal on
the East Coast and there's a listenable signal for them on most nights.

Steve

Oops, 0666 is 9990 upside down, not 6660, for some reason this thought
occurred to me while I was watching Monk, hmmm.

Thanks much for the response. I'll need to pay attention to this frequency
as well over the next several days.

I have to agree with that post.  Not only is it the stupid contsts,
people like Glenn Baxter, etc. It is also groups like the ARRL, who
hold back things like getting the code dropped.

I always enjoyed listening to the Liberty Net on 3950.  It was always
good to listen to fine viewpoints on that net.

I also get a kick out of listening to 14.313 at times.  I hear things
are picking up, I may just have tune, with my Tiny-Tenna of course!

Hello Ma'am.

Unfortunately it is difficult to combine portability in the sense you mean with good performance. Also I have found that short wave radios do not function well in most workplaces with their fluorescent lights, computers, and other sources of interference. Short wave signals are generally exceedingly weak and modern office equipment is especially electrically noisy.

That said, there are two well-made radios that I would recommend. I own several units of both models so I have a great deal of experience with them.

They are both Sonys - the ICF-SW35, which can be purchased for $90.00 or less (often around $75.00) and the ICF-SW7600GR, which costs about $130.00 - $160.00. These radios are both superior performers within their price range and would offer excellent reception in proper listening venues.

Whether your husband's workplace "qualifies" as a good listening venue is something only you and he can judge.

If you choose to buy one of these Sonys, I strongly recommend that you do NOT buy on eBay. Buy from a reputable dealer who will assist you if there are any problems whatsoever. My first recommendation is Universal Radio, an excellent dealer, though their prices on these two radios are at the high end. A less expensive dealer is J&R Music World in New York. There are also a few Yahoo! dealers which sell these radios at fairly low prices.

My radios are between seven and three years old and the ICF-SW35's, for example, are kept in my cars' glove compartments all year 'round. They are robust - they'd need to be to "survive" in such conditions. Yet, whenever I place their batteries in them, they work flawlessly. My ICF-SW7600GR's are also very well constructed; I feel that this model is the best small portable currently being manufactured.

Both are very easy on batteries; no AC-adaptor is necessary (or desirable). I personally use rechargeable NiMH batteries which make the running costs in the long run exceedingly low.

The major difference between the two are the presence of a synchronous selectable sideband circuit on the '7600 (I know you have no idea what that is, but take my word for it: it is good) and that the '7600 has a keypad for directly entering frequencies which the '35 does not. Unlike some other people however, I do not find the lack of a keypad to be a detriment to the operation of the ICF-SW35. Its image-rejection is superior to that of the '7600 (this is good, also). Both of these models have many "memories" which allows the owner to "store" a great number of "favored" frequencies.

I believe your husband would be pleased with either and who knows - you may find that you enjoy listening as well!

All my best wishes,

Joe

Dear Billy,

You are turning out to be a real moron. The kill file is just a time saver. 132 articles were posted to the news group just today and most were from the same continually off topic posters. Why take the time to go through them just to see the posts you want to read? With the kill file the computer can be programed to display only the posts you are likely to want to read.

Now you for instance have just show up making a bad impression in several posts being mostly off topic. Shape up or end up in most people's kill file.

Got several strikes against you already:
1. Reintroduced by one of the news groups long time Trolls.
2. Then spams the news group.
3. Then shamelessly further self promotes his business.
4. Several posts with content similar to what is quoted above.

It's your choice as to wether you are worth the time to read and my choice wether or not I'm going to read what you post. I can continue read the news group without reading you if I want.

I don't hold out mush hope for you though based on the Troll-ish stupidity by you quoted in this post.

Time for you to get a clue, if its possible.

I'm watchin' you Billy boy.

Longtime AM/FM/shortwave radio DXer Don Erickson of Riverside, California died Monday (3/1/05) in a noon-hour fire that engulfed his home. Firefighters had to break through windows that were boarded up, and found Don's body in the back of his home. A fire department official described the home as one of a "pack rat" with stacks of newspapers and magazines from floor to literally the ceiling.

Don had been a radio hobbyist for decades, and had been very active in various radio clubs. So far, officials have yet to determine the cause of the blaze.

Sad news.

FYI.

Dear Ducky,

It is FAR more sensitive. But remember - sensitivity per se is not the most important attribute of a good short wave radio, at least nowadays, when virtually all short wave radios have sufficient sensitivity. A sensitive receiver will pick up local electrical noise even better than an insensitive one! A radio/antenna combination which will minimize that problem is better than one that won't.

Take my advice about buying the AOR WL500 Window Loop Antenna (on a returnable basis) first and try it with your Sony ICF-SW7600GR. If you see an improvement in reception quality, then the Grundig Satellit 800 will certainly outperform (on an absolute basis) the Sony, due to its far superior image rejection, IF filtering, AGC action, etc.

In order to improve your reception quality, first you must increase the signal-to-noise ratio. Only an antenna can do that. If you find one that will work well in your location (and I believe the WL500 is one that will), then you can upgrade your shack to a better receiver with the knowledge that you are getting your money's worth.

If, after following my advice, you ultimately do buy a Satellit 800, well then you can aspire to someday owning a Wellbrook ALA 330S Active Loop Antenna, the finest antenna being made today. But that will be far into the future.

You should find that the Grundig Satellit 800/AOR WL500 combination will afford you excellent reception and many hours of pleasant listening.

Best,

Joe

Mostly true and I agree on the radio comms

But in several instances, we had info that the TV and radio didn't have.

How -- we had Amateurs on the scene in many instances. Many lived right in the path of the fire and relayed what evac orders were in effect from authorities. RACES was at several locations as well as ARES

As for your last statement:  "What good is amateur radio if the only thing you're allowed to discuss
> is CQ's and "my radio is better than yours"?

It is raining here and I being under the weather spent the day inside, playing radio.
Here is the topics discussed today on our repeater.

An F-14 pilot gave us a rundown on landing the beast. We discussed the Academy awards and good movies. We discussed Steve Fossett remarkable feat. A homebrewer gave us the rundown on his 160 meter MOBILE antenna. We chattered about genealogy, the Civil War, Sherlock Holmes, So Cal's record rains, Joe Rudi NK7U the baseball player will have a web cam on during the contest. A Marine vet told us about the Chosin reservoir. An informative round table on cross band repeating. Our antique car restorer came in about his 1956 Chevy. PSK31 and PSK63 were discussed as well as the latest Digipan program. Howard Huges XF-11 was looked up on Google for info. The movie Ray was applauded. Our satellite expert gave us the rundown on the active birds. A plea was entered to support the bill to protect the Ham bands. Some of the TV court cases were discussed, love that Nancy Grace. DVD recorders were talked about. Several computer problems were solved on the air. Digital cameras and photo printers were compared. Some grousing about where our tax money goes. And that is just a few topics we discussed.The Hikers net came on at 2100 and I turned off the radio. Previous week night nets, ARES, Microwave, Sailors, NTS traffic, Off road, Ham help, and Ham Trivia.

And do you know -- not one CQ or radio comparison was heard all day.

Are not you stereo typing just a wee bit ???

What did you talk about today ??

Judging from what I have read about the Sony SW7600GR radios,I think I
should go ahead and buy myself one of those radios.I have read before
both universal-radio and J&R are very good stores to do business with.I
think I will check out J&R if they sell the same model radio that
universal-radio sells.

HF Utility logs
9 Feb - 3 Mar
All times UTC, all frequencies in KHZ
------------------------------------------------------------------------

3390 - NNN0JQC in USB at 0203 w/ MARS net.

4024 - AAA6AR in USB at 0229 w/ MARS net.

4038.5 - NNN0AOC in USB at 0230 conducting MARS net.

4232 - RFLIE in RTTY 75/850 at 0243 w/ RY test tape.

4271 - CFH, Halifax CG Radio in RTTY 75/850 at 0246 passing coded meteo.

4295 - FUE, French Navy, Brest, in RTTY 75/850 w/ RY test tape.

4369 - WLO in USB at 0258 w/ automated YL/EE voice giving WX.

4780 - CGOOPS, unid ALE stn sounding at 0318.  T1Z sounding at 0320.  Poss FEMA stns.

5097 - CFH, Halifax CG Radio in RTTY 75/850 at 0334 w/ NAWS tape.

5505 - 'Shannon Volmet' in USB at 0340 repeating ID a few times, then into aero WX.

5547 - Shannon, Ireland ACARS stn at 0402 w/ HF ACARS data.

5547 - 'Evergreen 6307' in USB at 0404 wking San Francisco ATC w/ posn rpt.

5574 - 'San Francisco' wking Delta 571 w/ posn report in USB at 0407.

5875 - OTH radar at 0430.

6438 - FUE in RTTY 150/850 at 0435 w/ RY test tape.

6389 - CTP, Oeiras Naval, Portugal in RTTY 75/850 w/ NAWS tape.

6390 - OTH radar at 0441.

6497 - CFH, Halifax CG Radio in RTTY 75/850 at 0443 w/ coded WX.

6501 - NMN, Portsmouth VA in USB at 1735 w/ live OM passing maritime WX forecast, being interfered w/ by Yosemite Sam station on 6500.

6925 - Scrambled speech in USB at 0000.

6930 - YL/EE Mossad stn rpting SYN2Z58 in USB at 0453.

7520 - Cuban YL/SS 5F msg in AM at 0910.

8983 - 'CAMSPAC Point Reyes' Wking CG1701 in USB at 1953.

9251//12603 - Lincolnshire Poacher YL/EE numbers stn w/ 5F msg in USB at 2241.

9330 - Cuban CW cut # stn w/ 5F msg at 0413.

11175 - Unid OM in USB at 2203 saying "Hey Joe, you down there?  You downstairs?"  Later asked "Am I getting out now?"  Aparently grabbed the wrong microphone.

11175 - 'McClelland' at 1807 passing EAM w/ unid OM saying "No way!" and making rude noises on freq during EAM.

11253 - 'RAF Volmet' in USB at 1601 passing aviation WX for British airbases.

11330 - 'New York' ATC wking unid a/c w/ posn report & selcall check in USB at 1607.

11342 - 'AMC 5229' in USB at 1612 Calling San Francisco, SF advised to QSY to 6640.

12133.5 - AFN feeder from Key West in USB at 1953.

12359 - 'Southbound II,' Herb passing WX to sailing vessels at 2009.

12479/12582 - Unid ship in Sitor-A wking WLO on duplex channel 1206 at 1652.

12664.5 - RFFMEA, Papeete Naval, Tahiti, in RTTY 75/850 at 1911 repeating "non-protege" RY test tape.

12701 - CKN, Esquimalt BC CANFORCE stn passing NAWS CARB tape in RTTY 75/850 at 1700.

13031.2 - RFLIE, Fort de France Naval, Martinique, in RTTY 75/850 at 1932 w/ RY test tape.

13089 - NMN in USB at 1737 w/ maritime WX.

13101 - WLO in USB at 2107 w/ automated YL voice passing maritime WX forecast & tfc list.

13927 - 'Pack 11' in USB at 2050 w/ phone patch to 'Pack Control' through MARS stn.

13993 - AFA4C, MARS stn in USB at 1833 calling Ramstein.

15016 - 'Offutt' in USB at 0002 passing several EAMs.

15034 - 'Trenton Miliary' in USB at 1843 passing volmet.

15082 - Unid ALE stn 711 sounding at 1858.  Other stations on freq are NOJ, PTH, STP, and J06.

15867 - OTH radar at 2122.

15920 - Halifax CG radio w/ NAWS tape in RTTY 75/850 at 2129.

16554 - Unid multi-channel digital mode at 2136, also on 12924.

16868 - OTH radar at 2151.

16951.5 - 6WW, Dakar Naval, Senegal, in RTTY 75/850 w/ RY & "Voyez le brick" test tape.

16976 - Unid stn idling in RTTY 75/850, then went off air.  Came back up & repeated QRU/ZKM several times before going off the air again.

F-you!  I have off this newsgroup for over 2 years!

I have my own internet Talk show, what can be said about your useless
self.

You are very useless on here, jon

Even used up toilet paper has a use, you sure dont!

BWHAHAHAHA!!!!

news:u6ai21ljd54channot0ghfg2g0c71edp0s@4ax.com:

For not much more (perhaps $175) you can get the Sony 7600GR, overall the best radio in this price category. It has Synchronous Detection (many people desire this feature), which can improve reception under some circumstances, Upper Sideband and Lower Sideband (USB and LSB), also desired to listen to some military, aircraft, and ships), great battery life, great looking, and it would be new, so it would be under warranty and you wouldn't need to worry about getting an E-Bay lemon.

I like the following retailer:

http://www.aesham.com/

But here is another: Sony has the ludicrous prohibition against listing prices online, so you may need to call or write the retailer to confirm the price.

http://www.universal-radio.com/catalog/portable/0360.html  (Sony 7600GR) ($175?)

http://www.universal-radio.com/catalog/portable/0400.html (Grundig Yacht Boy 400 PE) $130

http://www.universal-radio.com/catalog/portable/3505.html (Sangean ATS-505) $120

I would stick with one of the above. As I said, you can get them new and under warranty for the price that you mentioned. They all have the USB and LSB that I mentioned. (Sideband)

The standing and walking around part may be a problem though, since these are not exactly pocket size. You are not going to get a pocket size radio that performs well enough for shortwave. But these radio are easily portable.

If you visit the web sites above, you should not need any accessories to use the radios listed above, with the exception of the Sony. The description seems to state that it does not come with an AC adapter.

Joe Analssandrini wrote:

> Hello Ma'am.
>
> Unfortunately it is difficult to combine portability in the sense you mean with good performance. Also I have found that short wave radios do not function well in most workplaces with their fluorescent lights, computers, and other sources of interference. Short wave signals are generally exceedingly weak and modern office equipment is especially electrically noisy.
>
> That said, there are two well-made radios that I would recommend. I own several units of both models so I have a great deal of experience with them.
>
> They are both Sonys - the ICF-SW35, which can be purchased for $90.00 or less (often around $75.00) and the ICF-SW7600GR, which costs about $130.00 - $160.00. These radios are both superior performers within their price range and would offer excellent reception in proper listening venues.
>
> Whether your husband's workplace "qualifies" as a good listening venue is something only you and he can judge.
>
> If you choose to buy one of these Sonys, I strongly recommend that you do NOT buy on eBay. Buy from a reputable dealer who will assist you if there are any problems whatsoever. My first recommendation is Universal Radio, an excellent dealer, though their prices on these two radios are at the high end. A less expensive dealer is J&R Music World in New York. There are also a few Yahoo! dealers which sell these radios at fairly low prices.
>

> My radios are between seven and three years old and the ICF-SW35's, for example, are kept in my cars' glove compartments all year 'round. They are robust - they'd need to be to "survive" in such conditions. Yet, whenever I place their batteries in them, they work flawlessly. My ICF-SW7600GR's are also very well constructed; I feel that this model is the best small portable currently being manufactured.
>
> Both are very easy on batteries; no AC-adaptor is necessary (or desirable). I personally use rechargeable NiMH batteries which make the running costs in the long run exceedingly low.
>
> The major difference between the two are the presence of a synchronous selectable sideband circuit on the '7600 (I know you have no idea what that is, but take my word for it: it is good) and that the '7600 has a keypad for directly entering frequencies which the '35 does not. Unlike some other people however, I do not find the lack of a keypad to be a detriment to the operation of the ICF-SW35. Its image-rejection is superior to that of the '7600 (this is good, also). Both of these models have many "memories" which allows the owner to "store" a great number of "favored" frequencies.
>
> I believe your husband would be pleased with either and who knows - you may find that you enjoy listening as well!
>
> All my best wishes,
>
> Joe

I own a little Radio Shack 150 channel hand held scanner radio I bought for $75.00 at the Eazy Pawn shop in Pearl across the Pearl River from Jackson.The radio works just like brand new.Sometimes I turn it on and listen for a while and I can hear a few Hams talking to each other.There is a Krystal restaurant about a block from me on Highway 80 just outside of Metro Center mall    www.metromalljackson.com   and I used to listen to the folks at the drive up window.It got to where I can't pick them up on my radio anymore and I wonder why? Did they start useing some sort of spread sprectum two way radios in there or what? [May I take your order,sir?] {two Krystals,two fries,and two cokes} [Thank you sir,please pull around to the window,your order is ready} I enjoyed listening to those folks over there.A few years ago,I used to listen to a few folks phone calls on my road and the next road across from me untill they got them digital spread sprectum (or whatever it's called) phones and them cell phones.I used to hear some real good juicy conversation on their phones with my little scanner radio.

the new tecsun PL-350 and the Degen DE-1103 would be good choices for less
than $75 and are available from the seller LIPYN on eBay.

both have gotten outstanding reviews and are very sensitive

Running Dawg not many cars are equipped with CB anymore.
And the range of CB can't be compared to Ham repeaters.

Let me give you a little insight to Amateur Radio Emergency Services
In our county, we have 35 repeaters on 2 meters alone.
Between 440 MHz and 220 MHz there are about 50 more repeaters
Most of these are on mountain tops.

There are probably 5,000 Hams in the county, many familiar with emergency nets and proper procedures. And many have HF capability on 10 bands. This gives us communications to all over the world. Don't tell me about the internet - it will fall apart when a national disaster hits. Ask the guys in Florida about that one. Cell phones were kaput also.

In our club alone we have 4 repeaters on a 5600 foot mountain.
They cover 2000 square miles of the county very reliably even to 1 Watt HT's.

During the early part of the Calif fires, the repeaters operated on commercial power. The fire swept up the Mountain and toasted the power lines. The repeaters went on battery power for several hours, then started to die. A crew went up the mountain, put gas generators in place and a mountain resident refueled them periodically as required. All of our repeaters were on the air for the full period of the fires 24 hours a day for about 4 days.

On one repeater alone -- 300 Hams checked in, over 1000 messages were passed.

This is a lot of communication power and has been invaluable during earthquakes, fires, and other disasters. RACES assists civil entities with supplemental communications and ARES works with the Red Cross. They were extensively used during the Calif fires.

Now this is just one county. Extrapolate that to all 50 states with 675,000 licensed Amateur Radio Operators.

If you want to know what Hams did during the hurricanes or 9/11,
use Google.

Walter Cronkite stated "Amateur Radio is probably the only fail-safe communications system in the world"

I agree as I charge my deep cycle batteries.

On Sat Mar  5 07:00:48 UTC 2005, I heard weakly a repeating CW beacon on
~2804.31Khz in Denver, Co. USA

`........   ..-.`

The last char is definitely an "F" but I either am hearing two chars run
together or 7 dits preceding it.  My Google turned up nothing. Any one

else hear it or know what beacon it i?

I don't know for sure,but learning the basic fundementals of useing a
computer (or even my stupid webtv box) couldn't be much harder than
learing to be a Ham Radio Operator.

I got a Degen 1103 and I find it to be outstanding. It is about $75 on Ebay.
I suspect it holds its own with the Sony ICF-SW7600GR.

DX Ace,
 .
Rush Limbaugh has a $250M Contract with Clear Channel Premiere through 2009.
(About $30M per year)
http://www.clearchannel.com/radio/
http://www.premiereradio.com/
 .
If his Contract does not prevent him from Airing his regular daily
Talk Radio Show on Shortwave Radio; he could easily put a simulcast
or rebroadcast of his daily Talk Radio Show on Shortwave Radio.
 .
The key for him would be if he could charge (bill) the existing
Advertisers for the "Additional" Shortwave Radio Air Time and the
'extra' {expanded} World Wide Shortwave Radio Audience.
 .
Or - If he could have a 'separate' group of Advertisers Targeted for
the World Wide Shortwave Radio Audience.  (It's About The Money)
 .
Hey Rush Limbaugh could be a Trend Setter with other current Talk
Radio Personalities following with their own Shortwave Radio Shows.
 .
Another thought would be that Clear Channel could get into the
Shortwave Radio Business and put a select number of their current
under-contract Talk Radio Personalities and 'others' on their own
Shortwave Radio Stations and Transmitters.
(From Deep-in-the-Heart of Texas, USA.)
? If Clear Chaneel got into Shortwave Radio would others follow ?
 .
Yes - Rush Limbaugh could be on Shortwave Radio
and Heard 24/7 Around the World
 .
guess i will just keep on dreaming ~ RHF
 .
 .

Up yours, Telly-tubby.  I'm watchin' you too.  First off, I didn't start the troll.  Second, I'm not keeping the subject alive....it's your redneck buddy in Mississippi.  And thirdly, I am not spamming.  I have introduced subjects AWAY from the TT.  (If you have noticed, I have quit using my usual signature line mentioning my website....WHICH IS PERMISSABLE USENET ETIQUETTE ANYWAY......in favor of humorous TT liners.)

You can take your clue, and cut and paste it where from your speaketh: out of your colon hole......

Now....go out and enjoy the day.....

Part of an old commercial I used to hear on the radio many years ago about Tennessee Pride sausage.The name on the package is Tennessee Pride! Well,the name on some radios (Drake,Ten-Tec,Palstar,and there is another one too,but I forget which one it is just now) means something to me and metinks I also like Sony,Sony 7600GR.

Be sure to check out this website:

http://qth.com/dwm

Three select Sangean receivers of various price ranges are featured
there.  There is also the Sangean PT-80....which I hear is
fantastic....available from:

http://www.alfenterprises.com

Hope this helps!

I'll wait on the mainstream stuff.  I'm a year behind on the pop culture.  I see it as a defensive move.  The last thing I want to be is in sync with the masses.

That would be the final nail in the HF broadcasting coffin.  Look,

unless you're in the middle of nowhere there are much better ways to get the variety of programming once exclusive to HFBC.  It's the 21st Century people.

Next week's topic on "DX Radio School" will be solely devoted to this fine newsgroup.

We are going to talk about its humble beginnings, some of the fun characters over the years and how the audience can join in on the action of rrs.

Been thinking about introducing a free handout on how the listener can access rrs through Google.

Sounds like fun!  We'll get some fresh, new faces in here....and brighten things up in ole' rec.radio.shortwave!

Back in the 1940's,there was a little girl who lived next door to me
(Susie is her name) and us crazy kids would be outside playing and
acting crazy as usual.Susie would get all pissed off and she would say,I
am going home now!,but I will be back!

Lighting tore us up yesterday afternoon, most of the south part of town was with out power a few hours and I was out 12 hours.

I took a hit on my transformer on the pole, blew it apart. Nothing happened to my radios or computers. I have my computers on a UPS so I had lots of time to shut down gracefully. My radios run on large 12v batteries so they came out ok, my antennas are grounded and one coil did drop and I had to replace it this morning.

So it worked. Who would have thought that "I" would get hit out of all the houses and antennas around here. I went through the motions of grounding but thinking I would never need it. I use UPS's on my computers, TV and CD players because of "brown outs". I run my radios on 12v batteries to get away from the AC hum and normally recharge when I go to bed.

At the time I got hit I had two PC laptops going and one "Big Mac", the Sat 800 and the BC 895. I ran the radios from 5:30am until I went to bed, I have two of the biggest batteries that Cosco has, I replaced the D50's that I used for years and used the Cosco batteries because of price.

When the power came on about 4am I got up and checked to be sure everything was charging then went back to bed. Something to remember, UPS's are only good for 2 years. I sell a UPS with every system I install and I always push for them to change them out in two years. I have also found it is good to "work" the batteries, I pull the ones down in my motor home every few months, I "recharge" my car batteries every few months to keep them toped off, alternators do not top batteries off, they only replace what is used, """Maybe"""!!!!

OK, here's my report on the power outages. Pick it apart if you want but it works.

Mongolloyd is a welsh jew!
http://www.houseofnames.com/coatofarms_details.asp?sId=&s=Davies

Origin Displayed: Welsh

Origins Available: Welsh, Jewish

Spelling variations include: Davies, Davis, Divis and others.
First found in Flint, where the Davies family was seated from very
ancient times, some say well before the Norman Conquest and the arrival
of Duke William at Hastings in 1066 A.D.

Some of the first settlers of this name or some of its variants were:
Arthur Davies and Dorothy Davies, who both settled in Virginia in 1623;
as did Christopher and Emanuel Davies in 1635; Daniell Davies, who came
to the Barbados in 1635.

Isn't it ironic, given the anti-Jewish things he's posted?

That is just dumb. This has nothing to do with the character or personal characteristics of the soldiers, likely more to do with procedures and compliance with a roadblock. Perhaps also confusion on the part of the driver of the car. Most soldiers are simply trying to do difficult tasks under dangerous circumstances. Let's wait for the investigation to show what happened.

'Proudly Canadian' is an oxymoron, moron. Duh!

This may also be a problem with the "Noworyta News Reader/2.9" that you are
using.  It may not interact very well with your ISP's news server. This is
not a commonly used application and may have support problems.  I certainly
understand the wish to not use Micro$oft program though. (Computers really
don't need Gates or Window$ IMHO).

Yes, this came out after.  Obviously not enough time in jail.  They couldn't
```

```
make charges stick except once on this guy for sexual assault.  Many
charges though.  I heard the interviews with his brother and father, both
who used the word "psychopath".

I think the soldiers were just jumpy. The road to Baghdad Airport is
supposed to be the most dangerous road in all of Iraq.

This newsreader is the only online newsreader I could find at the time I bought my computer (2002) and it was free, so what do you expect. Every so often I can't access my server AT ALL, one time it wouldn't access it for three days. Most newsreaders are "offline" which means they download everything on the group and cache it on your computer, and never purge the old articles so you end up looking at old articles all the time. I don't like that. So this newsreader was the only online one I could find on Tucows.

A few points to make about Iran/Persia.

Persians (historically correct, "Iranian" is a 20th century phenomenon) are notorious deceivers. The are very good at originating propaganda and conspiracies.

With that said is it any wonder that the monies spent to spread Islamic propaganda has far exceeded all that which was spend by all nations during the cold war!? That is a fact.

Furthermore, with the advent of the internet and reading the titles of these TV clips, it should be no surprise about where these anti-Bush and left-wing socialist conspiracies theories originate from.

Propaganda in this day and age can be far more effective than just a decade or two ago. This the Persians are well aware of but left-wing socuialist have a hard time realizing.

Think about that.

in a world of greedy companies pawning off cheap trash as a method to extract your hard earned money while giving the very least possible in return......... i HAVE been very happy with my sangean ats606 radio. its small, good on batteries and will take a beating. it also runs circles around all my other radios when using the whip. its not cheap but its within your price range. for a little more money you can get a little more radio with the sony 7600gr. its a little more serious radio with single side band and synch lock. if your husband doesnt know what those things are, then he isnt ready for them yet and probably would be better served with the simpler radio. there are a butt-load of cheap junk radios out there so do your research before you decide. its not that a cheap radio cant be fun, but you dont want to pay too much for it.

Though it is on 15205, 13710 is much better here. It is also on 17560.

"Racist" is one of those made-up smear words designed to stop debate. See

http://www.nationalvanguard.org/story.php?id=4523

for further information on the origin of the word.

But to address the original question:

If we define the word to mean a person who believes that there are socially significant and ineradicable differences between the human races, and that our society ought to take these differences into account when making public policy, and that our society ought to have the survival and integrity of its founding race as a primary and indisputable value, then virtually all of the founding fathers of the United States of America -- Thomas Jefferson, James Madison, George Washington, James Monroe, most members of the original Congress, Francis Scott Key, and hundreds more, even including Abraham Lincoln -- would have to be included under the term.

Another worthwhile article on the subject is:

http://www.nationalvanguard.org/story.php?id=4524

And there is a shortwave connection: This week I interview the
Director of the Institute for Historical Review on my radio program
on this and other topics, and the main subject is a man known by
many here for his own shortwave radio broadcasts: Ernst Zundel. See

http://nationalvanguard.org/story.php?id=4676

for further details.

With all good wishes,

--

Kevin Alfred Strom.

Really? It _isn't_ free speech?

What other historical opinions should I be locked up for holding?

If I publish a dissident view on WWI, or the Salem witch trials,
should I also be jailed because I am trying to "rewrite history"?

Should historians who rock the boat with new theories or ideas be
locked up, too?

Are we _absolutely sure_ that the court historians of today are
right on everything, and infallibly so? Are their opinions so holy
that they deserve to be "protected" by imprisoning those who differ?

See:

http://www.nationalvanguard.org/story.php?id=4669

and

http://www.nationalvanguard.org/story.php?id=4667

By the way, Mr. Zundel's radio program was not _American Dissident
Voices_. That's my show, which first went on the air in 1991. I
believe Mr. Zundel's show was called _The Voice of Freedom_.

With every good wish,

When I used to use Window$ I tried the 'forte free agent' and mozilla, which
is now thunderbird.  I believe you can do the online thing with the free
agent.  I'm on Linux for quite a while, but someone else may have
suggestions.  I certainly appreciate the problem.

False. This was never even alleged.

[...]

> In case you were not aware of it, Ernst Zundel
> is a GERMAN CITIZEN. He is not a Canadian
> Citizen. He fled to Canada on a visa about a week
> before he was to be picked up by the German

Again, completely false. He was kidnapped on false charges by jackbooted goons in the U.S., and shipped to Canada without trial and without his consent. His trial in Canada was in secret and he was not allowed to confront witnesses or even see the secret evidence against him.

[...]

[...]

Also false. The judge in question had actually ruled _in favor_ of the pro-White church in question. See this piece by prominent attorney Edgar Steele:

well yes, i am having fun....... but you still seem afraid to actually answer my question. i dont care that you need a drake to sooth some kind of penis envy. and i am not too proud to be a "tard" i just wanted to know the basis behind the portable thing. most of us have portable radios and i wondered if your slam on portables was only and specifically directed at the guy you were calling a "tard" or does just owing a portable  make one a tard? and why would that be? thats why i called it a broad-banded insult. most of us are guilty of owning one or more portable radios....... um, err.... it dawns on me that i have got 6 portable sw radios. am i a tard to the sixth power? a serial tardist? a tardaholic? i just want to know.....

---

If you don't understand killfiles then you've never been on the receiving end of consistent insults and trolls.  There are people who post in this NG who basically ONLY insult others personally or insult their country.  They post aggressively whatever the topic may be.  They alienate and annoy many of us.  These people don't respond to polite suggestions about their manner of posting, and they often continue to post and post again in the same topic threads until they finally generate a response.  A killfile in this sort of situation is like telling someone to stop bothering you. Like finding an "off switch".  Justified and necessary, unfortunately. There is more than enough data to suggest psychological pathology and plain mean spiritedness for a number of these persons.

To slightly correct you, a killfile is like filtering out static.  Makes the reading so much more pleasant

Never should have posted earlier in this thread to a troll.  You're from the same state as one of the most famous trolls and insulters, must be catching or part of your inbreeding.  You just qualified for the kf.

Personally I think the neo-cons are a waste of time... why do you
bother with them? Don't you have better things to do with your short
life.?

I ignore people who start shouting racist and crap, they are just
looking for attention. Life is short, As a sane person, I have better
things to do than play kiddy games with retards and fuckheads that are
looking for attention.

If you ignore such people, they go away. :)

I hope your ready to pay increasing taxes,

Sure you fucks would pay increased taxes to bomb the fuck out of
"ragheads" but you wouldn't lift a finger to help your fellow man in
this country.

It's easy to say "bomb the ragheads" when you are letting others do it
for you, and others are dying for you. Why don't you go on the front
lines lazy asses?

I had one of those 'expensive' TenTec receivers for around a month. Sent it packing, back to its birthplace.

Way to much money for very little increase in performance vis a vis the Drakes.

I've done all right with my current line-up.

Guess you better go look at the figures regarding the help that our fellow man has received over the years, most of it to no avail.

Take your rant somewhere else, liberal 'tard boy.

i am trying to get a new computer as cheaply as possible and our local
fox news channel said this was a very legal offer so i thought i would
give it a try. sorry for the "spamming", i am just trying to get the
word out. i appologize for any incomvienence and thanks to anyone who
signs up.

all you have to do is sign up - complete 1 no obligation (that means
free) offer and than get 10 people to do the same thing. Give it a try,
what could it hurt?

Here is my referral link. To help me get my Desktop PC, click this
exact link to join, or copy and paste it into a browser:
http://www.FreeDesktopPC.com/?r=11596071

Then why do the several dozen hams/swls at eham.net give it a 4.1 out of 5????  Are they all doing a Lewinski on Bob Crane??

No!  Your beef is that it doesn't work well with the whip. Sangean PURPOSELY did not put a preamp circuit in with the ship as other units, BECAUSE they didn't want overload problems like the other units! I have a Sony 7600. It has overload problems with an external antenna. But....it is the best receiver when running off the whip because of the amplification.

The whip on the 909 is nothing more than a decoration. Put an antenna on the 909 and you've got a GREAT portable DX machine....

No one's calling you stupid ... at least not me ... for I find myself in exactly the same financial situation you are in.

And I have a master's degree in electrical engineering (which drew me to your posting and the replies on the TinyTenna), a 163 I.Q., and a published book ... all of which, as Chuck Harder might say, would together with a dollar would buy you a cup of coffee at McDonalds ... which is just about as good as a $1.62 cup o' joe at Starbucks or Caribou.

Speaking of stupid, though, I really wonder about Chuck Harder. I listen to him talk on the radio about abstract stuff like politics, economics, social issues, history, religion, and related topics, and it just doesn't come out quite right.

For example, take economics - specifically, inflation.

Chuck Harder understands that we've had a lot of inflation since 1964 ... he goes on and on about the wondrous prices we paid for basic necessities back then, then compares these to what we're shelling out today.

But as Chuck tells it, all this inflation happened yesterday, not over the past 40 years. Why, I was just recently paying 29 cents for a loaf of bread, Chuck intones on his show, and yesterday I went to the local Wal-Mart and the exact same loaf was $1.49. How terrible! No wonder our dollar is in the crapper viz. the Euro!

Huh?

When was the last time anyone under 45 could remember paying 29 cents for a loaf of bread?

I'm 46, and I certainly can't.

Chuck seems to have a problem with temporal cognition, a fancy-schamntzy term for difficulty in telling time over very long periods - a characteristic of adolescent brain development. If true, this would imply that Chuck has an adolescent intellect - or in crude, politically-incorrect parlance, is a numbskull, a lamebrain, an imbecile, or a moron.

(You can tell I'm a Three Stooges fan ... I voted for W. too ... oh, how so Red Nation!)

```

Well,Ten-Tec is just up the road from me in Tennesse and so is, www.jeepdoc.com   and I own a 1942 Willys World War Two Jeep and I own a 1948 Willys Civilian Jeep too.One night at Tan Son Nhut,I "borrowed" a Jeep to go to that bar where my Vietnamese girlfriend (Le Yhume) worked on Huen Hue Street (Street Of Flowers) right across the street from the U.S.O.and I used to bring  her sandwiches and Shasta grape soda pop from the U.S.O.

cuhulin

Thanks for the offer, cuhulin, but I restrict my sexual activities to human "wimmins". You have yourself a good time while you're there, though. Be sure to practice safe sex, and don't forget to call them the next day. They really appreciate that.

> of Animl Medical Center,,,,,,,YOU MOther Fucking

The mother of my children, yes. ;)

> SON OF A BITCH!!!!!!!!

There's that B-word again. You're really hung up on the female dogs, ain't ya?

Mississippi.

You are the majority poster to the thread if you haven't noticed.

> And thirdly, I am not spamming.  I have introduced subjects AWAY from the TT.

Yes you are Billy. Starting with the TT and then your other products you
don't make money on. That's one of your jokes right? Then mention the
show you sponsor.

Yeah, hell no that's not spamming Ha, Ha, Ha.

> (If you have noticed, I have quit using my usual signature line
> mentioning my website....WHICH IS PERMISSABLE USENET ETIQUETTE
> ANYWAY......in favor of humorous TT liners.)

Your derogatory sense of humor is not appreciated. I didn't complain
about your sig. The content of your posts are the problem.

> You can take your clue, and cut and paste it where from your speaketh:
> out of your colon hole......

There is a good example of something no one wants to read but you think
it's "humor."

> Now....go out and enjoy the day.....

I don't need your approval. What I will do is continue to read the news
group without you.

Burr....it's even worse than I thought.  I can see why many ISP's are
dumping usenet. It's just too much of a hassle, with all of the
```

potential lawsuits and crap.  Look at CuHu and what he said about Bob Crane!

Thought maybe things had changed in here.  This time I was wrong. Still WAY too many sickos for me to tolerate.  In fact, I'd say there are more!

I think I've changed my mind about next week's program.  I would be much too humiliated to mention that I've hung out here periodically.

73, GA and CUL
WA8MEA SK.

Yeah, we will have to listen once just to see what a spamming new group
Troll sounds like. I wonder if any of his news group "jokes" will get on
the air.

The last time someone popped a cork in rrs like you are doing, they
were approached by the FBI.

There are a lot of people like yourself that think they can say or do
ANYTHING on the internet.  You are in for a VERY BIG surprise if that's
your opinion.

Remember: You have freedom of speech.  But you DO NOT have the right to
yell "fire" in a crowded movie theater.

Now behave like a real man, and stop acting like such a horses ass.....
You are giving the people of Jackson, MS a very bad opinion....

Bill

I don't appreciate Billy boys humor or Trolling or spamming so he is in
the kill file. People that continually respond to his posts will also
end up in the kill file.

I'll wait one more day before I start adding people that respond to him.

Make your decision. I've made mine not to read him.

Terrorists with a bomb in the car speed up to road blocks and blow up
the car to kill the soldiers. Jumpy? You bet!

Maybe the US west coast is in the skip zone for the middle eastern
transmitters. Signals could be bouncing right over us.

Having been in just exactly that kind of job,
I can tell you without question that this is utter bullshit.
No way a contract employee is going to be doing this for
as long as it went on without oversight, not to mention
making toast of his job and going to *jail* for misappropriation
of government equipment; that just did not happen.
This is a B.S. cover story, regardless of what AceHole thinks.

Does anybody know how to adjust the BFO carrier insertion point on this receiver? This one is skewed off to one direction. As an example, LSB comes in fine when the USB mode is selected, but if I select LSB, the BFO carrier is almost out of the I.F. passband. I did readjust the reference oscillator for the microprossor as was suggested, but to no avail.
The schematic shows an adjustment for the HET oscillator, but I don't think this is the one I need to adjust since this oscillator operates at 14.8483MHz.
The tuning appears to be on frequency...........when I inject a .1uV signal at the antenna input with a synthesized signal generator, the carrier centers at the displayed frequency.
Does anybody have any ideas?

Pete

I've kept my RX340. Sometime it does better then the Drake R8B and
sometimes it doesn't. They are both terrific radios with their own
characteristics. The difference between them performance is not much so
I can understand your assessment.

'tards are people that just don't get with the program, any program, independent of what radio they happen to own.

I didn't visit the web page as it requires registration.

One little minor detail.   There were 16 marijuana plants found on the
property.

```

Since Teamon has "PLONKED" me, let me preach to the others in the choir...and point out his warped sense of logic:

>> First off, I didn't start the troll.

>Yeah but you are benefiting from it.

Oooooooooooooh!!! What a HORRIBLE sin!!! Last I checked, this WAS America! And I think we have some form of capitalist government here.

>> Second, I'm not keeping the subject alive....it's your redneck buddy in Mississippi.

>You are the majority poster to the thread if you haven't noticed.

You are wrong. I'm looking at the thread right now and it's the Mississippi Moron that has the majority. Your killfile is warping your process of reasoning.

>> And thirdly, I am not spamming. I have introduced subjects AWAY from the TT.

>Yes you are Billy. Starting with the TT and then your other products you don't make money on. That's one of your jokes right? Then mention the show you sponsor.

Which ALL pertain to SHORTWAVE. If I were you, I'd change your warped value system and go after the REAL spammers in this group: the political BS. But you are so hateful of this capitalist system we have in the U.S., you will do anything to harm it. I know your kind.

>>Yeah, hell no that's not spamming Ha, Ha, Ha.

No it's not.  Here's the CORRECT definition from spam.abuse.com:

**There are two main types of spam, and they have different effects on Internet users. Cancellable Usenet spam is a single message sent to 20 or more Usenet newsgroups. (Through long experience, Usenet users have found that any message posted to so many newsgroups is often not relevant to most or all of them.) Usenet spam is aimed at "lurkers", people who read newsgroups but rarely or never post and give their address away. Usenet spam robs users of the utility of the newsgroups by overwhelming them with a barrage of advertising or other irrelevant posts. Furthermore, Usenet spam subverts the ability of system administrators and owners to manage the topics they accept on their systems.

In a court of law, you know my postings would not be considered spam.

>> (If you have noticed, I have quit using my usual signature line mentioning my website....WHICH IS PERMISSABLE USENET ETIQUETTE ANYWAY......in favor of humorous TT liners.)

>Your derogatory sense of humor is not appreciated.

Says who?  I'm certainly not going by your screwy opinion of things!

>I didn't complain about your sig. The content of your posts are the problem.

Which, again, is about KILLFILES.  Get a REAL life, you poor, rejected, useless eater....

>> You can take your clue, and cut and paste it where from your speaketh: out of your colon hole......

>There is a good example of something no one wants to read but you think it's "humor."

I would MUCH rather see witty remarks such as this, than the F U, S U & SH--, and other crap I'm seeing in here....and for some odd reason, you don't object to becuase you have a fetish on me and the TT....

>> Now....go out and enjoy the day.....

I don't need your approval. What I will do is continue to read the newsgroup without you.
Bill boy - WAAAHOO

>>SNIP the BS from Telly<<

< Plonk >

And I love it!  Because I can talk behind his back, and he cant' see me!  And the rest of the gang is still here, enjoying themselves....

There's the problem with you Chuck Harder supporters ... we Chuck Harder antagonists try to make our case, and you pro-Harderites go off the deep end and resort to profanity and scatology ... how PATHETIC ... a word which describes Chuck Harder's ENTIRE career ... no doubt, the world would be a MUCH better place WITHOUT Chuck Harder ... ahhhh, PEACE AND QUIET!!!!!

>From spam.abuse.net:

**There are two main types of spam, and they have different effects on Internet users. Cancellable Usenet spam is a single message sent to 20 or more Usenet newsgroups. (Through long experience, Usenet users have found that any message posted to so many newsgroups is often not relevant to most or all of them.) Usenet spam is aimed at "lurkers", people who read newsgroups but rarely or never post and give their address away. Usenet spam robs users of the utility of the newsgroups by overwhelming them with a barrage of advertising or other irrelevant posts. Furthermore, Usenet spam subverts the ability of system administrators and owners to manage the topics they accept on their systems.

Now there are a couple of not-so-bright people in here who think because I own a part-time shortwave/ham business, that I am not allowed to discuss any of MY products that are mentioned BY OTHERS in rrs. Isn't that ridiculous?  After all, who would know more about those products than the person who mfg's them!

And to TRY and further their weak arguement, they cry "SPAM".

Sorry, guys.  Ain't gonna work.  And to prove it, I invite ANY of you guys and gals that are so obessively-compulsed with me, my TinyTenna...or my not-so-TinyTenna....to contact Google Absue, and send

them examples of my so-called "spamming".  I'm sure Google.com will be
objective enough in there decisions.....

Until such time, I will continue to participate and talk about ANY
product ANYBODY in rrs talks about. (Self appointed usenet police or
not....)

I are.....

972 CHINA Xinjiang RGD, Mar 4 1440 - Noted with brief peaks to good level with Chinese orchestral music and male announcer in minority lang. (listed Kazakh), parallel to 4330 kHz. By 1445, Xinjiang had faded and was replaced by the more common Asian on this frequency-- HLCA KBS Liberty 1 from Korea-- in Korean. This week has been good for TP DX from the more common Japanese MW frequencies, too, such as 594, 747, and 774 kHz. (Atkins-WA)

I have been getting my news almost exclusively from International
Broadcsters for decades.  I do read the local rags for local news.
The best day of my International Broadcasting life was when XM started
offering the BBC World Service 24/7 in HIFI, followed by Sirius with
BBCWS News and WRN.  I have my shortwaves for hobby purposes, my news
craving has moved on.

Just as I thought. You really don't care about shortwave, just about spreading your ideology. Well, go spread it someplace else, like talk.politics.misc, or alt.conspiracy. The same goes for Al Patrick, who is more interested in the narrow ideology of the kooks on shortwave rather than on getting the many varied viewpoints shortwave offers. I suspect that most of the people here aren't really concerned about shortwave as a hobby, just about finding another outlet for getting "news" that agrees with their worldview. Well, there's something on shortwave for everybody, but try stepping outside your closed little world and listening to viewpoints other than yours.

 This is a simple matter of priorities. If shortwave radio is of
sufficiant importance, you will upgrade to the better reciever. The
"800" is an excellent radio. Darren

What will you do when XM and Sirius drop the BBC or "censor" it the way the satellite services do with CBC's As It Happens? I figure it will happen about the time that the US government comes for our radios. You seem very concerned about that, but not about the fact that anything that comes over a satellite can be censored or dropped by the well connected corporation that provides the satellite service. Like with TV satellite, just TWO big corporations control satellite radio. THEY control what you hear and don't hear. With shortwave, *I* control what I hear (well, me and the ionosphere, but at least the ionosphere can't be controlled by a big corporation or a government-yet). That alone makes shortwave superior to a corporate controlled, fee for service satellite media source. When the US government censors satellite as heavily as they do broadcast and cable media, deciding what gets to be aired and making sure there's nothing "seditious" there that might give the sheep ideas, shortwave will still be there, still giving UNFILTERED news from a multitude of countries (well, there's still the propaganda factor to consider, but at least shortwave content is not passed through a couple big all powerful entities), and still unblockable, uncensorable, and defying all attempts at jamming. I suspect the day will come when posessing a shortwave radio is a capital offense in the US, like it is in North Korea, and the ultimate in news sources is illegal to listen to precisely because the government cannot control it. Government can control MW/FM/broadcast TV, cable TV, and satellite services, but they can't control shortwave.

It seems so. He knows that he doesn't care about shortwave, just about spreading his ideology. Well, this is not the place for it. To be fair, other posters seem to regard this group as a forum for their mental instability. Al Patrick posts bible quotes all the time and suggests that God agrees with his favorite kook hosts, while dxAce insults everybody with the same insults all the time and listens exclusively to Diego Garcia. But David posts the most off topic posts, and most of the stuff he posts isn't even on shortwave (at least Al's kooks are on SW) but stuff he got off the internet.

It must be nice to be independently wealthy. Able to surf the internet and listen to Diego Garcia all day without worrying about how to pay the bills, able to buy THREE Drake tabletops without blinking and then criticize "tards" who listen on portable radios. dxAce truly lives in a rarefied world. He's the Paris Hilton of SWL, a legend in his own mind, somebody who can afford to indulge in SW and the internet and not have to get up early every day to go to work. Some people have all the luck. Meanwhile, the rest of us will be slaving away to pay their bills.

I grant you, JD, that people in that position can do stupid crap-
I've seen that myself- even been guilty of it (just a human, not
an angel ;-).
But this went on for a very long time, using a lot of equipment.
That it was done in such a major manner without any oversight
at all is difficult to believe.  "The simplest explanation is
usually correct," and the simplest answer is that it was

a government exercise.

> It certainly helps, but it is absolutely no guarantee. I also highly doubt

> they may be in the unemployment line sans clearance.

Sometimes I deeply regret quitting and surrendering my clearance,
which is worth considerably more than its weight in gold.
Anyone who would lose his over such an outrageous fit of
stupidity needs commitment to a nut-doctor hospital.

Sorry, JD; there's just no way I buy this was some contractor
minion having fun- too much time and too many resources
were involved.
73 Dave S.

The government doesn't censor regular radio.  The regular radio censors itself.

I didn't say I was going to sell all my radios.  I'm keeping them handy.  Right now, though, I'm really digging the freedom to tune into the Beeb or Radio Australia or Koln without any static.

The American people are so freaked-out and scatterbrained already the government sees no need to be overtly restrictive on the flow of information.  People don't even notice the bad news when it's right in front of them.

Might as well go down in flames with full-bandwidth audio, don't you think?

In Sacramento we have an FM station called Howard 93.7. "Howard in the morning...Stern all day". Yes, they play Howard Stern 24/7. Whoever thought this up should be shot. I suspect that Rush 93.7 would be about the same, just the opposite end of the spectrum. Who wants to hear the SAME GUY ranting on and on all the time, except followers of Gene Scott? That said, I suspect that Rush Limbaugh will have very little interest in him outside of the US. His commentary is very America centric, and he represents a political bloc that doesn't exist in other English speaking countries.

I listen to the Coast Guard and other Utilities.

The SWBC bands are a very small fraction of the HF spectrum.

By the way- since when do the Native American nations
issue TS clearances?  Certainly, they can "own" the
business/base, but if cleared people are running it,
then by definition it is an Uncle operation.

First it was Al Patrick whose mind snapped. Now David has "freaked out" at RHF for RHF's pointing out all his off topic posts. But Cuhulin gets the gold medal-post after post of insults without any clue as who they're directed at or what the cause for all the spewing is. I think we need a Red Cross padded ambulance to take them away to the funny farm and put them out to pasture. THAT should take care of most off topic posts.

I have been to Canada before.June 1956,Cardston,Alberta,Canada.We drove up the Going To The Sun Highway through Waterton International Peace Park.Part of that Park is in Montana,the other part is in Canada.There is some fantastic scenery there.I hate to have to say this,but my 1986 Ford car one of my nephews gave me for free for Christmas last year was made in Canada.Please don't hate me too much just because my old 1986 Ford car was made in Canada.The old car runs good too.However,Henry Ford did put the World on wheels.

cuhulin@webtv.net wrote in news:11746-4229BE25-205@storefull-3251.bay.webtv.net:

How many more years until you turn 16?

Respect is given to those that deserve it. No doubt that the Iraqi conflict is filled with individual men and women that have honored themselves and their fellow soldiers and have honored this country. Unfortunately, just as with police, the situations where individuals go awry are often glossed over by the military hierarchy.  i.e. you don't get the true story when they fuck up. You get "their story". (the military leaders).

Saying that you support your troops should not mean that you sanction everything that they do, such as torture, rape, or the careless sacrifice of human lives of the indigenous people of the countries that you are occupying.

Supporting your troops should mean that you will back them in situations where it is reasonable for them to have acted in such a way that unfortunately caused the needless loss of human life. In other words, they weren't intoxicated, or simply having fun shootin groundhawgs (sic), or that they were not delinquent in their duties to the point that they acted in panic in a situation that would have a different outcome had they been performing as expected. People are being killed.

The dead on both sides are not actors, they do not get up when the movie is over, collect their paycheck and go home. Before you make someone dead, you should be justified in doing it. You should not do it capriciously.

More importantly, supporting your troops should mean that you will help to take care of their loved ones, whether they (the individual soldiers), make it home or not. You should make sure that their psychological and physical problems are taken care of, especially if they didn't have them (the problems) before going to war.

Look here: http://www.fallenpatriotfund.org/ there is a picture on this page that shows various people, the first picture down from the top. Look for Marine Staff Sgt. Mark Graunke Jr.  He has all his parts (before going to Iraq, no doubt).

Then look here: http://www.t-nation.com/readTopic.do?id=573963 Still the first picture down. What a difference. The following is a description of what changed, body part wise, since the picture above.

(or here, in case the image on the above site was removed or inaccessible, http://www.cadet-world.com/ )

"Graunke received $40,000 from the Foundation to assist with living expenses after he lost his left hand, left eye, right leg above the knee, his right thumb and index finger, and hearing in his left ear when a bomblet exploded in his hands during his work as an Explosive Ordnance Disposal (EOD) Technician on July 2, 2003. Graunke has a wife, Florence, 24. "

But you know what, I bet that you don't consider being concerned about his needs "Supporting our Troops".

Let me know when you get your drivers license.

But it HAS! The Brits, Canadians, Iraqis and reporters HAVE been bombed and shot by th Americans. Let's not forget the wedding parties. It's time to end the invasion.

I have an ICOM 737 and it has always worked very well.  I do mostly CW
and the other day when I turned it on, the keyer would not send dots;
only the dash side works.
I checked out the keyer paddle, cable, 3-conductor plug and everything
seems o.k.  (The blue keyer button the back is in the right position.)
I tried removing/repalcing the plug several times to clear any dirt,
but no results.
This leads me to believe something went wrong in the keyer circuit in
the rig.
Anybody have any other ideas?

73

More nonsense.......................they try to get your personal
information and bounce your credit application. I have an income/debt ratio
of 60% (only 40% going to my bills with 60% remaining) and a credit rating
in the 700s and they told me that my credit wasn't good enough. What a joke!

Italy greets dead agent as hero

By Christiano Corvino

ROME (Reuters) - The body of an Italian secret service agent shot by U.S. forces in Iraq has been flown home to a hero's welcome amid mounting anger in Italy over his killing.

Agent Nicola Calipari died while shielding reporter Giuliana Sgrena, just freed after a month held hostage, from U.S. troops who opened fire on their car near Baghdad airport.

Sgrena was wounded in the attack and flew back to Italy on Saturday for medical care. She rejected a statement by the U.S. military that its forces had fired on the Italians because their car was speeding towards a checkpoint.

Calipari's coffin arrived at Rome's Ciampino airport at midnight on Saturday aboard a C-130 military plane. His wife, mother and daughter broke down in tears as his casket, drapped in an Italian flag, was carried out by a guard of honour.

President Carlo Azeglio Ciampi held both hands up to the coffin, standing motionless in front of the body for almost two minutes before allowing it to be placed in a hearse.

Prime Minister Silvio Berlusconi, government ministers and clergy looked on, while five of Italy's seven national television stations broadcast the return live, underscoring the huge sense of shock and disbelief in Italy over the killing.

Italy has proved one of U.S. President George W. Bush's most fervent allies in Europe, but Calipari's death has put a strain on relations and Rome has demanded a full investigation.

The U.S. military said its forces shot at the car on Friday evening after flashing lights and firing warning shots to try to get it to stop.

Italy's minister for parliamentary relations, Carlo Giovanardi, told state television on Saturday that he did not believe the U.S. version of events.

You're getting as wacky as Al Patrick. Care to give a reason as to why we'd want to kill these people? And why we didn't do a better job of it? If we'd -really- been out to get her/them, a roadside bomb would have been the -perfect- cover for the killing considering the road they were on. And we'd have been out of it clean.

Do you guys ever try to think some of this crazy stuff through -before- your knee jerks? If not then, how about at least before you post it?

I don't care if founded the news group. He is a trolling, spamming, foul mouthed idiot. Moron thinks everyone should just accept the way he thinks or views his activities. Not ... a ... chance of that happening.

He is in the kill file because I'm not wasting my time reading him and that's it.

You were luck.  It's always best to disconnect any long wires from equipment during electrical storms.  I've seen the backs of TV sets blown off.

Rely on the Varactors and gas dealies as insurance for when a storm hits and you're not home.  Otherwise, unplug and ground.

I agree that we need some alignment info for this radio.  My BFO has
drifted a bit and  the synch modes have some annoying subsonic stuff
happening and the display is a kHz off.

Australia is doing worse than NZ this afternoon on the middle SW bands.
I'm waiting to see how they do on 21,740 today 22:00 to 00:00 UTC.

Hasn't been that great for me today. I noticed that the solar wind magnetic field direction is opposing the earths magnetic field. This is never a good thing for propagation.

<http://www.sec.noaa.gov/SWN/index.html>

Radio Netherlands was comparatively weak and noisy today out of the Antilles instead of being very strong and sounding like a local station.

Only 17,725 from the Antilles was strong where 17,810 and 15,315 were weak. 17,875 from the Sackville was very strong as usual.

Australia and NZ have not faired very well so far today with 17,675 for NZ being the best so far today.

In about half hour I'll see how RA does on 21,740 22:00 to 0:00 UTC.

Transcript From RushLimbaugh.com:

http://www.rushlimbaugh.com/home/daily/site_030405/content/eib_love_line.guest.html

CALLER: We do appreciate you and the only thing we regret is it's very hard to pick you up out on the water but as we are members of the 24/7, we will be able to catch up on that when we get back.

RUSH: Well, thanks very much. You know, we used to have a shortwave affiliate out there in New Orleans. There was a shortwave affiliate in New Orleans. You remember that, Brian? That was before you were born. We had a shortwave affiliate out there, and I don't know what happened to these guys, maybe terrorists blew them up or what have you, but that was cool because you could broadcast during the day. You could hear this program on the cruise ship, for instance, if you took a little shortwave radio. We ought to look back into that and try to revive that, so it would help guys like this going out on their anniversaries on cruises and so forth, in remote parts,

parts unknown, that don't have EIB affiliates.

news:4229EAB4.8020707@library.flawlesslogic.com:

> http://tinyurl.com/4sw29

Actually: http://nationalvanguard.org/story.php?id=4678

After you people have looked at this page, if you decide to do such, read the following article on Propaganda. Compare the way the images are presented with the images available at:

http://en.wikipedia.org/wiki/Propaganda

It's all propaganda, virtually everything we hear. Though the above page ( http://tinyurl.com/4sw29 ) will no doubt be perceived as propaganda by many (it actually is in the context of the Propaganda article), we miss that fact that most of what we are exposed to in the media is also propaganda.

Actually read the article, (on Propaganda), and see how widespread it is. Advertisers, lobbyists, politicians, the government itself, is constantly engaged in propaganda.

Compare the image in the http://tinyurl.com/4sw29 (I Love my Family, I Love my race), on the left side of the page, with the image on the Propaganda article page "An ADL poster uses a young Chinese boy to argue that anti-Semitism hurts non-Jews." (also on the left side of the page).

Look at the images throughout the page http://tinyurl.com/4sw29 and the images throughout the Propaganda article page. Strikingly similar in appeal.

Concerning everyday propaganda, a while ago I researched the statistics for crime committed against blacks by whites.

Look here for the statistics,
http://www.ojp.usdoj.gov/bjs/homicide/race.htm

The web site is the U.S. Department of Justice, Office of Justice Programs. It can be clearly seen that the black on white crime exceeds the white on black crime:

"Blacks were 7 times more likely than whites to commit homicide in 2002 "

Blacks are more likely to kill whites than whites to kill blacks. But the charts do not go far enough in stressing that blacks represent a substantially smaller section of the overall population, only 15% nationwide. So 15% of the population commits nearly 65% of the violent crime in this country. A staggering statistic.

YET, from watching TV and listening to focused news stories, one would have the belief that the statistics were the other way around.

"Fifty percent of the murder arrestees during 2002 were black, and 47.7 percent of arrestees were white".
http://www.fbi.gov/ucr/cius_02/html/web/offreported/02-nviolent02.html

The above figure states 50% of the murder arrestees being black is to be contrasted against the fact that they only represent 15% of the population, and concerning violent crime the statistic only relates to murder, not including armed robbery, rape, etc. This takes the total of violent crimes committed by 15% of the population to the 65% level that it is.

Bottom line is propaganda, we are constantly told how evil white people are, and that they commit a great deal of hate crimes against blacks. It couldn't be further from the truth. Case in point:
http://www.newsmax.com/archives/articles/2002/10/14/174304.shtml

""When a white commits a murder against a black, it's national headlines. But when two blacks force their way into an apartment, rape two white women and take them and their three white male friends and murder them in cold blood, it's not even worth a national news story," said he in a recent column."

"Akbar Shabazz of the black conservative group Project 21 is not surprised that the trial is receiving minimal coverage."

"The cases are very rare when you do have black-on-white hate crime prosecutions. But I don't see the hate crimes angle. I feel that these are some brutal guys who definitely deserve the death penalty, but I didn't think that they took them and killed them strictly because they were white," Shabazz said."

They killed 4 white youths, the 5th, a woman, escaped after being raped, shot, and ran over by a pickup truck and left naked in a country field in the middle of winter, and Akbar Shabazz doesn't feel that this was a "Hate" crime. You have got to be fucking kidding me. He feels that this was just part of a routine holdup and the race of the victims played no part. Raping women is part of a routine holdup.

Everyday Propaganda (that blacks are suffering disproportionately from violence committed by whites), simple as that. It's unfortunate that in today's supposedly open society, that one would need to spend hours looking for the statistics, they should be easily available.

Soliloquy

Not much of a signal here on 21740 at 2159 s/on, but certainly listenable.

Staff members of San Diego Gas & Electric Company (SDG&E) in California announced during a February 23 presentation to the San Diego DX Club that the utility plans to deploy multiple broadband over power line (BPL) test sites in San Diego County. Locations for the BPL pilot projects have not yet been specified. Several BPL equipment vendors are expected to be involved in the trials, each with its own test area and frequency plan, and the first system could be in place as early as this June, with others following soon after.

The SDG&E staffers said they were unimpressed by early BPL equipment, but were encouraged by a December visit to the Cinergy BPL system in Cincinnati--said to pass some 50,000 homes reportedly without generating any interference complaints so far. Cinergy has partnered with Current Technologies in its BPL venture.

ARRL Lab Manager Ed Hare, W1RFI, says that while Current Technologies' BPL equipment does reduce emissions in most spectrum used by Amateur Radio, it operates at full strength on other HF spectrum--such as the international shortwave broadcast bands--and it uses low-VHF on medium voltage lines.

"The Current Technologies' BPL HF emissions are from the 120/240 V wiring only, so it is not likely that the signals will propagate along a line as well as systems that put HF signals directly onto overhead medium-voltage distribution lines," Hare said. But he added that even with the best "notching" techniques, interference is still possible from a nearby BPL system.

"ARRL's concern is that if the degree of protection this BPL equipment provides proves inadequate for such circumstances and interference occurs, there are no additional solutions to apply," Hare said.

RA starting out very weak on 21,740 22:00 UTC. Time will tell will if
the signal picks up a bit throughout the broadcast segment.

This is normally a very good signal to southern California.

Who ever said it was 'government equipment'? The place where the transmitter was found was a private company as far as I am aware of, and located on a Native American reservation.

I think he's assuming it's gov't equipment because of this quote:

"Using this gear they located the offending transmitter at the MATIC
facility on the Laguna Indian Reservation. MATIC is an acronym for the
Mobility Assessment Test and Integration Center. This is a military facility
used to develop advanced battlefield communications...."

I assumed it was a government facility as well, until I researched it and
learned that MATIC is owned by the Indians, and not just on land leased by
the gov't, etc.

FlowerinThWater@webtv.net wrote in news:15999-42295EC9-646@storefull-3253.bay.webtv.net:

I read an article the other day of a couple (man/woman thing, you know, a couple), that had been fined and threatened with equipment confiscation since they weren't complying with FCC regulations. The couple's equipment consisted of a battery charger or two for the charging of the couple's electric scooters. You see, the couple did not have an FCC License, they possessed no equipment requiring them to posses a license, yet they have been fined and have been threatened with equipment confiscation since their equipment is causing RFI.

Can you learn to press buttons on Handie Talkies (HT), Walkie Talkies, Base Stations, to turn knobs, enter frequencies with the keypad, etc. Sure. Can you learn to do it legally? Therein lies the rub.

http://www.arrl.org/news/stories/2005/01/06/2/?nc=1

Modern people think that simple operation of equipment is all that is required for them to be a professional. But to be a good HAM, you need to understand much more (I'm not saying that I am a good HAM).

I also have an interest in telescopes. Years ago, anyone with any pride labored to grind and figure the mirror for their telescopes, assembling the entire unit, understanding something about optics in the process. They went outside, learned the sky, found the objects of their desire, and observed them. Today, you open the box, remove the wrapper, put in the batteries, enter the coordinates from a chart, and viola!, the scope slews to the desired star. In return they know little of the optics and even less of the sky. Yet that call themselves amateur astronomers. I realize that the cost is low enough for most people to buy decent telescopes today, something that wasn't the case years ago, therefore they built them, but they still learned about them in the process.

You see, we don't have the time to do the work building them, nor learning the sky, we have such busy lives. But subtract the amount of time that we spend perusing porn on the internet and watching endless hours of televised movies, reality shows, and sports, and I think that you would see that we do indeed have the time, but we waste it on superficial things, things that in the long run produce no edification.

Aye, you can learn the fundamentals, but can you do it legally, effectively, can you diagnose problems when they occur, or will you simply throw out the item and buy another. Will you simply add a bigger AMP (like the CB linear AMPs), or will you cunningly design your antenna system so that you get the performance that you want with less power and therefore less liklihood that you would produce interference.

Soliloquy.

> I don't know for sure,but learning the basic fundementals of useing a
> computer (or even my stupid webtv box) couldn't be much harder than
> learing to be a Ham Radio Operator.

I write about the US because Canada really sucks. I don't like the US military because they don't let gays enlist. Other than that the US really rules. I would bend over frontwards and take it up the butt from an US citizen if I could.

Nothing important ever happens here in Canada. I wrote the following song though. I hope you like it. It did not take long to pen. It does not have much substance. It's actually pretty stupid, but I like it anyway.

O Canada!
Our home and native land!
True patriot love in all thy sons command.

With glowing hearts we see thee rise,
The True North strong and free!

From far and wide,
O Canada, we stand on guard for thee.

God keep our land glorious and free!
O Canada, we stand on guard for thee.

O Canada, we stand on guard for

They were, comparable to the norm for me, very weak at S1 levels. Now at
22:49 they are averaging S3 and hitting S4 on the peaks. Listen-able but
somewhat noisy. I can over the bookshelf speaker understand all that is
being said. Often the signal level is over S6 in the bad times and more
like S10 in the good. This is on a horizontal loop, which this time of
day is not optimal. I expect the signal level to continue to improve
over the broadcast because it usually does.

I'm in California, and I used to be able to pick up several Middle Eastern stations regularly. But now I can't. Maybe the sun is affecting the atmosphere so that US west coast IS in the skip zone, and this will continue for the next couple years or so. I tried listening for the Radio Cairo broadcast on 9990 that Artaud said was strong enough to interfere with WWCR on 9985, but heard no sign of it. I heard WWCR, and WWV, but not Radio Cairo. In another post you noted that propagation was poor today, so that probably has something to do with it.

Yeah, sure wouldn't want to blame those who are actually detonating the car bombs.

That would just be plain foolishness wouldn't it?

I thought the US and Canada were allies. (Regardless of our missile policy.)
We did fight in WW1 and WW2 and other wars to help - cut us a little slack
here. This NG is about shortwave right?

Mike T.

Between MW/FM, the internets, Worldspace, Sirius and XM, there aren't that many ''unreachable'' people left. Certainly not enough for most countries to justify the expense of maintaining a fleet of 250 kW transmitters around the world.

According to a former top Bush administration official, Russian special forces teams moved weapons of mass destruction out of Iraq to Syria.

"I am absolutely sure that Russian Spetsnatz units moved WMD out of Iraq before the war," stated John Shaw, the former deputy undersecretary for international technology security.
...
According to Shaw, Russian units hid Saddam's arsenal inside Syria and in Lebanon's Bekka valley.

"While in Iraq I uncovered detailed information that Spetsnatz units shredded records and moved all WMD and specified advanced munitions out of Iraq to Syria and Lebanon," stated Shaw during an exclusive interview.
...
Lebanon and Syria

The arming of Iraq with such weapons has a direct impact on events today in the Middle East. The presence of former Iraqi WMD systems in Lebanon raises serious questions surrounding the Feb. 14 assassination of former Prime Minister Rafik Hariri. Many blame Syria for Hariri's murder.

However, the possibility that Hariri discovered the location of the Iraqi WMD systems inside his country lends some credible backing to a Syrian assassination effort to silence him.
...
http://www.newsmax.com/archives/articles/2005/3/2/230625.shtml

WHICH PROBABLY EXPLAINS THIS...

Syria Ignores Demand for Full Withdrawal

President Bashar Assad on Saturday ignored the Bush administration's demand that he completely withdraw Syria's 15,000 troops from Lebanon by May, announcing a two-step pullback to the Lebanese border and negotiations with Beirut on a full pullout.

Beka Region

"We will withdraw our forces stationed in Lebanon fully to the Bekaa region (in the east) and later to the Lebanese-Syrian border areas."

http://www.newsmax.com/archives/articles/2005/3/5/142810.shtml

NEED TIME TO CLEAN-UP THOSE IRAQI WMD'S?

Assad Secretly Deploys Joint Iranian-Syrian Units in Lebanon

Assad has deployed Iranian military and intelligence units across Lebanon alongside Syrian secret agents and Hizballah. They also man early warning stations on Lebanese-Syrian and Lebanese-Israeli borders and Syrian-Iraqi borders.

http://www.debka.com/article.php?aid=995

---

REACTIONS

Washington takes steps for Syria's isolation after Assad�s rejection of Lebanon pull-out. White House official Hadley notified Europeans that decision covers cutoff of Damascus� international banking ties and the flow of international funds to and from Syria through Lebanese banks.

UN Middle East envoy Terje Roed-Larsen travels Sunday to Europe, Saudi Arabia, Egypt and Gulf emirates to finalize the US-Arab-European consensus on international sanctions against Syria.

March 17 he will give Assad last chance for total pull-out from Lebanon or face up to UN sanctions. Chirac has already ordered French ties with Damascus severed at all government levels.

"We will not stay one day if Lebanese consensus asks us to leave," said Assad in hour-long unscheduled speech full of contradictions to parliament in Damascus Saturday. "But we cannot abdicate our commitment to Lebanese president."

He ceded only eastward redeployment of Syrian troops eastward to Beqaa Valley up to Syrian border - no withdrawal or reference to thousands of secret service agents. "Syria's role in Lebanon will not end with military withdrawal," he said.

Lebanese opposition leaders immediately rejected Assad statement as failing to announce withdrawal and lacking timeframe even for redeployment.

Mike Terry,
 =2E
Rush Limbaugh has a $250M Contract with Clear Channel Premiere
through 2009. (About $30M per year)
http://www.clearchannel.com/ra=ADdio/
http://www.premiereradio.com/
 =2E
If his Contract does not prevent him from Airing his regular daily
Talk Radio Show on Shortwave Radio; he could easily put a simulcast
or rebroadcast of his daily Talk Radio Show on Shortwave Radio.
 =2E
The key for him would be if he could charge (bill) the existing
Advertisers for the "Additional" Shortwave Radio Air Time and the
'extra' {expanded} World Wide Shortwave Radio Audience.
 =2E
Or - If he could have a 'separate' group of Advertisers Targeted for

the World Wide Shortwave Radio Audience.  (It's About The Money)
=2E
Hey Rush Limbaugh could be a Trend Setter with other current Talk
Radio Personalities following with their own Shortwave Radio Shows.
=2E
Another thought would be that Clear Channel could get into the
Shortwave Radio Business and put a select number of their current
under-contract Talk Radio Personalities and 'others' on their own
Shortwave Radio Stations and Transmitters.
(From Deep-in-the-Heart of Texas, USA.)
? If Clear Chaneel got into Shortwave Radio would others follow ?
=2E
Yes - Rush Limbaugh could be on Shortwave Radio and Heard
24/7 Around the World.
=2E
=2E
HELLO EVERYONE - WRITE RUSH LIMBAUGH
AND ASK HIM TO GET BACK ON SHORTWAVE RADIO NOW !
=2E
Rush Limbaugh Contact Information :
http://www.rushlimbaugh.com/home/menu/about.guest.html
=2E
*  SEND AN eMAIL :
You can eMail Rush Limbuagh at: rush@eibnet.com

"Tom Sevart" <n2uhc.spam@yahoo.com> wrote in
news:38url5F5r93nbU1@individual.net:
```

Hey Tom, do you find yourself using such terms as Diversity, Racism, Multicultural, Inclusive, et al. with astonishingly regularity.

You can be indoctrinated with many forms of racism, Jewish against non-Jews, blacks against white, Islamic against Jewish, etc., but for some reason so many people find it necessary to say the same asinine politically correct things in response to specific posts only. A gay Priest molesting children is endlessly newsworthy, but a gay Rabbi molesting children never makes the news.

"I only hope that poor girl isn't indoctrinated with the poison of racism by her parents."

How pathetic. It reeks of political correctness, yes Tom, you have said the politically approved sensitive thing for the day. Now spend a couple of hours reading articles of Christians being persecuted by gays, Jews (the ADL and the preposterous separation of Church and State myth), the Government, etc.

Somehow, I can imagine that this persecution would not bother you in the least.

An article from the ADL about the JDL. READ THE LAST SENTENCE BEFORE THE URL TO THE QUOTE!. Look Tom, they mention, (shudder), Jewish racism. Don't sit so high on your throne professing judgement on the foibles of other people and organizations.

"About the Jewish Defense League:

The Jewish Defense League, also known as JDL, was established in 1968 for the declared purpose of protecting Jews by whatever means necessary in the face of what was seen by the group's principals as their dire peril. The founder, national chairman and leader of the JDL was a then-38-year-old ordained rabbi from Brooklyn, New York, Meir Kahane, who, in 1990, was assassinated in New York by an Arab extremist.

In Rabbi Kahane's gross distortion of the position of Jews in America, American Jews were living in a fiercely hostile society, facing much the same dangers as the Jews in Nazi Germany or those in Israel surrounded by 100-million Arab enemies. Rabbi Kahane believed that the major Jewish organizations in the United States had failed to protect America's Jews from anti-Semitism, which he saw as "exploding" all over the country. "If I have succeeded in instilling fear in you," Rabbi Kahane said in the closing statement of his standard speech, "I consider this evening a success."

In fact, Kahane consistently preached a radical form of Jewish nationalism which reflected racism, violence and political extremism."

http://www.adl.org/extremism/jdl_chron.asp

CNN Article on JDL terror:

http://archives.cnn.com/2001/LAW/12/12/jdl.arrests/

"Federal authorities Wednesday charged two leaders of the Jewish Defense League with conspiring to blow up Arab and Muslim institutions in southern California, including the offices of Arab-American congressman Rep. Darrell Issa."

Go Figure. Racists, in the JDL, do you suppose that they indoctrinated their youth as well?

For your perusal, a Russian HAM Radio site, of little use to me, as I don't speak Russian. But, and I have a big but, for some strange reason, the (I don't know how to put it in computerese), the page that contains all the links to all the pictures and text used by the page is in English.

Perhaps whoever compiled their page spoke English. But, and I have a big but, even stranger, there are numerous PDF files on this page (not extensive, but interesting), some are of manuals, and some are Service Manuals, and they are in English.

There are also executable programs. I viewed the instruction manuals for a couple of radios, they were posted in PDF format, and I saved them to the drive and scanned them for viruses before viewing. No problems though. They are in English.

Let me know what you think, perhaps someone knows some of the .exe by their names.

Go here: http://hamradio.online.ru/ftp2/  this is where the files are.

If you click the link at the top on the above page, described as "Parent Directory", you go here:

http://www.cqham.ru/

AH HA! I found an English entrance into the site, so this explains it somewhat. Anyway, give it a look if you wish.

http://www.cqham.ru/sch_eng.html

Anyway, on this page, some of the links do not seem to be adequately explained. Simply hold the mouse pointer on the various links and the description will be seen in the script on the bottom of the browser.

Hi,

I have listed my ICOM 706MKII on ebay.

This rig is great for the shortwave listner who is working on getting a HAM license.

It tunes from 1.8MHz to 199.99MHz. The receiver in this unit is one of the very best ever made.

The rig is in excellent condition and comes in the original box will the mic, power cable, mobile bracket, owners manual and quick start card, etc.

To see pictures click on this link:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&rd=1&item=5755587418&ssPageName=STRK:MESE:IT

If the link does not work for you just go to http://ebay.com and do a search for: 706MKII

This item ends TODAY Sunday March 6th. It also has a BUY-IT-NOW price.

Thanks,

Bill

Some of the Military HAVE been doing a lot better. Murdering just ONE man is underachieving to the extreme. That whole bunch should be demoted.

Have they not learned how to do it RIGHT? These guys know what it's all about. *Wholesale* death inflicted on a population that did NOTHING to the USA.

============================================

In an article in the online edition of the British medical journal The Lancet, U.S. and Iraqi researchers calculate that around 100,000 Iraqi civilians have died since the U.S.-led invasion in March of 2003.

Dr. Gilbert Burnham of the Johns Hopkins School of Public Health, a co-author of the study, says most of the casualties were women and children.

http://www.contactomagazine.com/killedcivilians1028.htm

I wasn't implying they plotted to kill anyone. I was implying they were stupid in the extreme and now trying to cover their sorry lying backsides. "It's a slam dunk"..

Get used to the fact that in a public forum there are always a few
knuckle heads around that need to go in the kill file. Put the few

"special cases" there and I promise the news group will be readable.

Just before the end of the broadcast at 00:00 the RA signal level was up
to average S6 and sounding fair.

RA is S10  on 13,630 from 07:00 to 07:30 so far.

No sign of NZ on 9885 at this time for me.

NZ went from zip to S9 at 08:00 UTC. They were supposed to be on 9885
since 07:28 UTC.

There is a guy in Russia and one day I saw a message of his on the internet about five years ago.He builds little wooden scale models of cars and trucks and ships.He was wanting to know how and where to advertise his products in America.I don't remember what all I told him,but I did help him out in some way.I got an email from him later on saying,Thank you the better for the kind attention.

RD - Hello it's a Metaphor.
 .
To Me the Phase :
"Rush Limbaugh 24/7 on International Shortwave Radio World Wide."
is a METAPHOR for bring some really entertaining Talk Show Hosts
on the Shortwave Bands that would be appealing to the American
(English Speaking) Listener.  Plus provide more of America's Voice
of the People to everyone who wants to Listen in the Around-the-World.

Most of the so called Shortwave "Kooks" lack the talent to be on
the Commercial AM/FM Radio Stations that are paid for by Sponsors
that are Real Businesses.
 .
Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM
Talk Radio Talents.  Put each of them on Three Hours a Day which
equals Eight Regular Hosts Around-the-Clock Monday thru Friday
with several other Hosts representing 'different voices' featured
during the Week-End.

.
Going back to my original post : Clear Channel could get into the
Shortwave Radio Business and put a select number of their current
under-contract Talk Radio Personalities and 'others' on their own
Shortwave Radio Stations and Transmitters.
(From Deep-in-the-Heart of Texas, USA.)
? If Clear Channel got into Shortwave Radio - Would Others Follow ?
.
and the world would be a better place ~ RHF
.
.

My "atomic" clocks (set by radio signals) can give me
the exact time for eastern, central, mountain and pacific zones.

A friend in the UK wants a clock like that, but I don't even know
if there are the same type of signals available in Europe for setting
the exact local time like we have in North America.

Nor do I know if there are similar clocks that can set the time
for European or UK times.

Anyone know if the clocks exist and access a signal like our NIST?

DM - And that would be a good thing !

"Rush Limbaugh 24/7 on International Shortwave Radio World Wide." is a METAPHOR for bring some really entertaining Talk Show Hosts on the Shortwave Bands that would be appealing to the American (English Speaking) Listener.  Plus provide more of America's "Voice-of-the-People" to everyone who wants to Listen in Around the World.  Most of the so called Shortwave "Kooks" lack the talent to be on the Commercial AM/FM Radio Stations that are paid for by Sponsors that are Real Businesses.
 .
Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM Talk Radio Talents.  Put each of them on Three Hours a Day; which equals Eight Regular Hosts Around-the-Clock Monday thru Friday with several other Hosts representing 'different voices' featured during the Week-End.
 .
This could CHANGE the overall Nature of American Shortwave Radio from a 'marginalised' media populated by the "Shortwave Kooks" to the more of the main stream of American Talk Radio.
 .

the shorwave world can be changed by one voice ~ RHF
.

Thanks Dan. She wants the accuracy of the atomic clocks, but
we don't know if they exist for Europe/UK specifically.

How easy or difficult is it for SWLers/DXers to pull in RAE Argentina? I was able to listen for about an hour and a half on 15345 during a soccer game (independiente v. San Lorenzo) SINPO was 34333 on a YB550 (a toy for some here I'm sure) with a little reel antenna.

How do you know that it took a lot of equipment? Actually, it wouldn't take much at all.

But hey, I now know that you're a conspiracy kook, so have at it! It's humorous to read.

Have your friend look for Junghans atomic clocks in europe. They are a long time producer of watches and clocks in europe. I've seen a couple of their atomic clocks here in the states and they are pretty stylish.

This is no excuse, but soldiers do make wrong decisions during war with tragic consequences.  Pick a war...any war...even the so-called "good war" and you will find plenty of examples.  Does anyone know if the soldier(s) were regular or reservists.  The car may have been speeding or they may have thought it was speeding.

Being a soldier in an urban warfare situation is stressfull in itself. Add in a role they were never trained to do...that of policeman and peacekeeper and you have to expect mistakes.

The unfortunate part is that the politicians who never served in such a situation but were the ones who started this war are now figuratively calling for some poor soliders head.

Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM
Talk Radio Talents.  Put each of them on Three Hours a Day; which
equals Eight Regular Hosts Around-the-Clock Monday thru Friday
with several other Hosts representing 'different voices' featured
during the Week-End.
 .
This could CHANGE the overall Nature of American Shortwave Radio
from a 'marginalised' media populated by the "Shortwave Kooks"
to the more of the main stream of American Talk Radio.
 .
the shorwave world can be changed by one voice ~ RHF
******************************************************************

i don't normally get into these type's of posts, BUT; most sw listener's
only know him as a dope-head, loud mouth, outside the US. our Gov. is
embarrassment enought. we don't need this person, and his phony EIB
network
to run his mouth for all the world to laugh at.
as RHF says, "my opine", as stated, don't mean s**t... (sorry bout
that).
i try to stay a-political...

Easiest solution is to not listen to him.  He was entertaining in the
early Clinton days, but imho he's way overboard.

I'm not sure I understand your idea when you say " Substitute the Name
"Rush Limbaugh" for any of the Top 25 AM/FM Talk Radio Talents.  Put
each of them on Three Hours a Day..."

Are you saying put Rush into a bunch of shortwave slots?  I don't
understand what would be done by subbing his name for established AM/FM
talent.

"also have an interest in telescopes. Years ago, anyone with any pride

labored to grind and figure the mirror for their telescopes, assembling

the entire unit, understanding something about optics in the process."

Actually i've read numerous articles in the last 10 years about backyard astonomers who have built their own reflector including the mirror.  Several guys have built their own binoculars (parallel telescopes), designed parallelogram mounts for smaller bins, etc. Optical instruments are cheaper now than they have ever been, so it is indeed easy to call Orion and place an order.  But DIY is still alive in backyard astronomy.

And the real issue with that couple was not that they caused the interference, but that they ignored several formal complaints from the FCC.  And the FCC could have used a little more common sense once they got the attention of that elderly couple.  Culpability on both sides.

It is entirely possible that the supervisors were unaware of it.  If you put Joe Blow contractor out in the middle of the desert for a few months with a bunch of radio equipment with little or nothing else to do, then you have a recipe for mischief.  It's unlikely his supervisors were listening to 3700, 4300, 6500, or 10500.

> "The simplest explanation is
> usually correct," and the simplest answer is that it was

Which doesn't explain why they shut the system down after it was tracked down.  Or why the FCC, which refuses to acknowlege the existance of numbers stations, would tell hams where the signal was coming from.

Hmmmmm.... well then, perhaps both I and Ace-hole could be right:
Government facility, government equipment, but doo-fuss operator.
If that's correct, the supervisor shouldn't get away scott-free;
it's his business to know what his people are doing.
Dave S.

Yes, time signals are available in Europe.  I thought that WWVB's signal was supposed to be heard worldwide?  But anyway, a British friend of mine bought an atomic watch several years ago and it worked fine.  I think there are other VLF time signal stations in Europe, too.

Who said it's a government facilty or that it was government equipment? It's a
private company doing work FOR  the federal government.

There is a difference.

Well, it depends on ones location, which you didn't give!

It depends upon propagation.

Morning Telamon,

Tried to write you direct but you address is bad. Sorry about you and Bill but that what America is, have your opinion! I don't see it that way but then that's me.

How's your scanning doing, did you ever get your antenna up over the ridge?

My DXing from the west coast has been doing well, lots of Asian stations and I will be in the Philippines in two weeks and I'm looking forward to so great DXing from there. I'll only have my YB400 and maybe the FR200 as a backup but I'll use the yo-yo that came with the radio as I have all over the world plus I'll take Bills double yo-yo and see how that works there.

Glad the storms are gone from here, we had another power outage yesterday while they repair more lines, about two hours.

One of these days before I move for good we need to do coffee, meet you halfway or something.

Chao,

Burr

But it HAS! The Brits, Canadians, Iraqis and reporters HAVE been bombed
and shot
by th Americans. Let's not forget the wedding parties. It's time to end
the
invasion.

mike

******************************************************************************

it's real easy to see who has seen combat and who has not. it's easy to take shots at the boys over there when you have no idea the stress they

are under. i don't support this war; but i support the men over there. i
only wish the Shrub and his veep- ("i don't have time for Viet
Nam"),could
be there, and go through what these men are going through.
i,like a lot of posters here know war, and how it feels. it's nothing i
would wish on you, or anyone. when you and Ace go after each other, it's
kind of fun to follow the posts. friendly fire is no laughing matter. it
happens in all wars. it's a fact of war. how would you feel if you were
the
one to give the order to fire, or pull the trigger on these people? if
you
make it out alive, you'll remember that moment all your life. again, i
wish
that on no one. please think a little more before you post. if you want
to
pick on the Shrub, or his veep, be my guest. please give the man,
putting
his life on the line his due. as of 3.05.05, 1502 young American lives
lost
over there. and God knows how many of Iraq's.
sorry about this; i'm getting a little long winded in my old age...

Drifter...

Hi,
from Frankfurt (Germany) it broadcasts the VLF time-station DCF77. Many
watches/clocks tuned to DCF77 are currently available on market.
DCF signal is "heard" here in South Italy too, so I think that signal is
pretty good almost all over Europe.

Best regards

Paolo

Thanks Ace.
The radio controlled clock on that page is exactly what she's looking for.
Note: the time signal originates from Rugby, UK.
Great link my friend. Thank you so much.

on 6.925 Mar 5, NY Time, at around 01:45 UTC, heard the following

2 women
 singing accoustic version of " Sweet Home Alabama"
- followed by 2 other songs
( one by Eric  Clapton,
then an ode to An illegal Substance)
```

Signed of with " WB3 Anhopper radio"

fairly poor quality, staticy, but( Mostly ) copyable

- anyone else hear this?

Dan  / NYC

Thanks Tom.
The page Ace sent shows a digital radio controlled clock and
the info on said clock mentions the signal comes from Rugby England.

Thank you. I'll check out Junghans as well.
Much appreciated.

Radio Australia on 6020, quite excellent this a.m. (1200 or so UTC).  Pretty weird program though, about a nun who became a prostitute on "Encounters". BBC last night on 6135 and 6005 quite good also.  This would be 0500 or so UTC.

RN from Sackville is always loud.  I'm not listening to them as much the past while - much less news and much more opinion or odd feature about something rare with more opinion.  I think their programming has changed for the worse - maybe the producers have changed? I don't mind broadening my horizons, but excessive opinion means switch to something else.  RA has some unusual stuff, but it is simply presented without all the opinion.
All of this is my opinion of course.  ;)

I think that's Ann Hoffer Radio. A semi-regular on the pirate circuit.

INTERNATIONAL SPACE STATION  LIVE ON ECHOLINK MARCH 8th TUES 1410GMT

The next International Space Station's Expedition 10 ARISS school contact will be with students at Rains High School in Emory, Texas on Tuesday, 8 March 2005. The event is scheduled to begin at approximately 14:10 GMT.

This contact will be a telebridge between stations NA1SS  and WH6PN in Honolulu, Hawai'i, so it should be audible to  anyone in the areas of the Pacific near the islands  listening in on the 145.80 MHz downlink. The participants  will conduct the conversation in English.

"Rains High School, a county school located in one of the  smallest counties in Texas, is comprised of mostly  low-income students who often do not get the opportunity  to participate in enriching programs. The opportunity to  talk with the astronauts on the International Space  Station will expose our students to a world that exists  beyond the boundaries of Rains County. The questions asked  of the astronauts and the ideas generated by the answers  will be used as jumping off points for further discussion  and research."

***Audio should be available for this contact***  Via EchoLink in the following conference rooms:
AMSAT node 101377
EDU_NET node 77992
See further notes below
Via IRLP Reflector REF9307 starting at 14:00 UTC
REGISTRATION REQUIRED (see below)
Via the internet:
URL: https://e-meetings.mci.com/
CONFERENCE NUMBER: 6037948
PASSCODE: SPACE STATIO

Students will ask as many of the following questions as  time allows:

1. How would a baby's development in the womb differ if the mother were in space?
2. What do you think will be the greatest technological advancement that will come out of the research you all are doing now?
3. How do you monitor your radiation exposure?
4. How did you adjust to Newton's third law of motion while in space?
5. Since you have been in space so long, have you had the opportunity to notice changes that have occurred on the surface of the earth from your perspective?
6. You have learned a lot of science, but what was the one thing you did or experiment you performed, while in space, that you remembered reading or studying about in school, that made you say, "Wow, it really does work that way"?
7. Do you think people will be able to spend the rest of their lives living on the space station?
8. Could a sphere large enough to let a small fish swim in it be formed in near gravity and could a fish actually swim in it?
9. What is the material used on the space station and how safe is it from space debris?
10. Are there any lubricants on the space station and if there are, how are they affected by weightlessness?
11. Have there been any new discoveries by researchers in space concerning the Texas state molecule, The Bucky Ball, C-60?
12. Are you allowed to carry person items and if so, is there a rule on how much you can take?
13. Do you ever get to review the final results of the experiments you help to conduct on the ISS?
14. What does it feel like when the shuttle takes off? Does it hurt?
15. If you were to push a hot wheels car on a circular loop in space in the space station, would it go forever and maintain the same speed?

Please note, the amateur equipment on the ISS will be turned off prior to the beginning of the contact. It will be returned to service as quickly as possible.

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organisations from participating countries. ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station.
Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning.
Further information on the ARISS programme is available on the website http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of Canada). Information about the next scheduled ARISS

contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

IRLP Notes
Participation in this contact is limited to 20 connections
and requires pre-registration.
Please contact Wayne, VE1WPH, via e-mail at ve1wph@rac.ca
for pre-registration and connection instructions.

EchoLink Notes
The contact between the ISS and school lasts for about 15
minutes +/-. During this contact, we appreciate everyone's
patience and understanding. We must mute everyone except
Dieter, KX4Y to avoid inadvertent, interfering
transmissions into the conference room. Thanks for your
understanding and co-operation.

Thank you & 73,
Scott H. Stevens / N3ASA
ARISS Team Member

I assume there are lots of people who have Atomic wristwatches on their
wrist and they travel from U.S.A.to Europe and back.Of course their
Atomic wristwatches work properly.I assume so,anyway.

They do exist, but the radio frequencies are different so an American
clock won't work there.

Well, the frequency is the same (60 kHz), at least for MSF in the UK, however, the way the time information is encoded is probably different. I'm not sure that that part of it is standardized.

It's a "typical" catch - it's a 100,000W station (good sized, but not huge). I use to get it regularly when I was using a Sangean 505 with the reel-up antenna.

Tony

Get over it already... your 'tard boy candidate (Kerry), who is a known and admitted war criminal, and serial faker of Purple Heart awards lost the election.

You'll all get another chance in 2008.

Keep trying at the shortwave, who knows, it might just work for you someday.

Yes. There are two functioning stations that carry time signals related to atomic clocks: MSF (Rugby, England) on 60 kHz and DCF 77 (Frankfurt, Germany) on 77.5 kHz. They have a range of 1500km or about 900 miles.

There are many clocks sold in Europe that use one or other of these standards; some can use either or both. A typical alarm clock might cost �10 or ~$20; but more expensive clocks are available.

Be warned, though, some digital clocks helpfully have a 'zone' setting, to enable the display of time in a different time zone - but not all of these will display the seconds count when so set. Having the seconds display is a useful tool for monitoring SW broadcasts.

I have heard that European clocks can sometimes be used in North America. Providing the local noise level is low, and the clock has its internal antenna set for maximum signal reception, there is a ~3hr propagation window at about midnight local time during which these clocks could update. I have no direct experience of trying this; others may know more. Digital clocks usually have an icon that displays when a correct update has been received.

Tell your friend to visit an 'Argos' store and get their free catalogue, or visit their website at www.argos.co.uk or carry out a European-based web search. Some Oregon Scientific weather monitors also feature a radio-controlled clock, but some don't.

Gee, you're probably right. NOT!

One has to figure that that road to the airport is a highly traveled route. Are the US forces opening fire on every single vehicle going through? Obviously not. I repeat, OBVIOUSLY NOT.

However, they WILL open fire on a vehicle that approches them at high speed, refuses to heed warning signs, signals and warning shots.

Don't you 'tards stop and think, even once?

Boggling.

But how many remember the nutcase three years ago....who started off on MT/Grove....then switched over to us at the urging of some of the folks in here that love us so much.  That guy REALLY snapped!  He started to make threatening phone calls to our house. And THEN he impersonated an FBI agent! Not good....

Needless to say, the FBI didn't like that in the least......

I've warned MANY about some of the screwballs in here, especially warning the yl's and xyl's.  If they REALLY wanted to talk shortwave, there are MANY other moderated forums they can go to.  But some like it here because this place is chaotic....and it's cheap entertainment.

 I picked up an older Sony radio at a second hand store. It's a
portable, with AM/FM/WB. Looking through search engines, I'm unable to
find any information. On ebay, someone was selling a manual for a Sony
ICF 7370, and the radio looked similar to this one, but the picture was
poor quality. I'm just curious about it, and wondered if anyone could
share information. Darren

Tell us exactly when YOU snapped, Bill.

I think you were doing fairly well with those meds for quite a while. When did you go off them?

I don't understand why clear channel would want to broadcast on shortwave.  Shortwave is just a medium, and not many people have the equipment to receive on that medium in the US.  There is a reason that shortwave is dominated by government and privately owned stations that are subsidized by non-advertising money.  The reason is small audience and no advertisers equates to no profit.

Broadcast FM & MW and satellite FM have a much much bigger base of listeners and clear channel will go where the advertising and subscription money is.  I have to admit that it would indeed be humurous to have Rush Limbaugh holding forth next to bible pounders, survivalists, denizens of the Montana forest and those who are still sure the commies are still poised to invade the U.S. via Mexico.  Rush has a loyal group of followers now so why risk losing some by switching to a relatively unkown medium like shortwave.  It would make as much sense to broadcast on LW.

I'm still completely confused by:   "Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM
Talk Radio Talents.  Put each of them on Three Hours a Day which
equals Eight Regular Hosts Around-the-Clock Monday thru Friday
with several other Hosts representing 'different voices' featured
during the Week-End."

I would have said the Sony 7600, too, since we just purchased one just a couple of weeks ago.

That was UNTIL I learned of the new Sangean PT-80. You actually might
get more features for less money with this radio....

Call Toni at ALF Enteprises and talk to her. She said this radio
"kicks butt"..... (1.360.403.4840)

Switching? who mentioned switching? Rush was on WRNO years ago because the owner liked his program and decided to air it.

If Rush were to air the ENTIRE program (it is on AFN currently for one hour), it would be in 'conjunction with' his current line-up of over 600 stations and not a 'switch' to shortwave.

Some of you out there need to learn how to think things through.

Yes, I know you're 'confused', but give thinking a tryout, you might like it!

Mega activity as of 1604 on 6230 USB, some US Navy strike group training excercise going on. It's mostly phonetic callsigns and "crypto" language but you can still get a general idea of what is going on.

4 Aircraft "Magnum 451, 440,454,453" went airborne according to the

radio ops.

Other callsigns (ships and subs?) Foxtrot Echo Five, Lima, Charlie,
Delta, Charlie echo five, november tango romeo, echo fox, Oscar,
Foxtrot.. and others.

Coming in good here at 1614, chances are they are operating on other frequencies as well, as you probably know.

Oh, by the way... I've never recommended that anyone use a TinyTenna.
A waste of money in my opinion.

Yup, I heard them talking about other freqs but so far I've only been
monitoring the 6230 frequency because of the excellent signals..
signals were booming better in the early morning 1000-1200 UTC>

Maybe some milair monitor can help us figure out the callsigns and what
ships, subs, and aircraft  they belong too.

Well, I did see something about some sub exercises that supposedly attributed to the beaching of the dolphins.

Dolphins, whales etc., have been beaching themselves for unknown reasons before the advent of sonar, etc.

RHF, you are totally right about the positive impact that someone of Limbaugh's stature would make on SW. I am totally for it and hope to see it happened ASAP!

But I also think we need to change the FCC rules about domestic shortwave. I don't pretend to know the law, but there's some legal reason that American shortwave broadcasters have to target their signal to people outside the US. I don't know what that is, but I strongly feel that shortwave would become infinitely more interesting and popular if this restriction was lifted.

cuhulin@webtv.net wrote in news:13636-422AB87E-899@storefull-3252.bay.webtv.net:

Being monolinguistic myself, I have to rely on the "online translation sites" in order to read some of the foreign pages.

http://babelfish.altavista.com/
http://translation.langenberg.com/ (excellent resource, many languages)
etc.

Anyway, it's quite hilarious to read the pages after they have been translated from the foreign language into English.

It's better than nothing, and easier than learning 20 languages. Yet the end result is oft times quite unpredictable.

Just send me the plans in an envelpe.You already have my name and
address.Spend that 37 cents plus the price of an envelope,I spent about
$9.95 plus shipping and handling charges about six or seven years ago
for my Tiny-Tenna and it showed up here dead on arrival, Tiny-Tenna
guy.I will be expecting it to show up in my snail mail box this week.

```

I just heard Steve, N8KDV on the Holland, MI repeater. (I hang out on
the Hillsdale Repeater...same frequency: 146.06 megs)  I swear, he
sounds like a
teenage kid!  But the strange thing was, I noticed he formally had a WN
call....just like I did.

So I do a little more research.  He was born in 1953.  He's a 51 year
old man!!  No wonder he doesn't get on the air!!!  Everyone thinks he's
some kid going through puberty!  (But in real life, he's a middle aged
man with a chip on his shoulder....)

Please....stay in shortwave.  You belong there......

73, Bill

Many years ago,every year at the Mississippi State Fair which is held here in Jackson every October,there used to be a guy who always showed up at the Fair over by the Exibition buildings.He always had the hood of his old car popped open and he was always hawking a gadget that was supposed to give cars more Horsepower and more Miles per Gallon and make car engines run much more Smoothly.Just Listen To That Engine Roar with

all of that increased Horsepower,Folks! I don't remember the name of those Phoney Baloney gadgets (I fell for that one) but he would stick those gadgets between the ignition coil wire and the distributor on the engine of his old car.Every time I think about my Worthless Tiny-Tenna,I think about that old guy at the Fair pulling the wool over those folks who were foolish enough to Waste their Money on those gadgets.

This on topic for several reasons. One of which is these clocks can be set to UTC in the 24 hr format (and also the UTC date if so equipped). The clock I have has the UTC date which is either the same or a day ahead of my local date depending on time of day. This clock helps me keep track of SW radio station schedules.

Just because someone doesn't want to participate in amateur radio doesn't mean they are technically illiterate.  I am both a ham and SWL'er and sometimes I get bored with amateur radio even though I'm into digital modes, CW operating, QRP, homebrewing, SSTV, and beaconing.  But my first love is and always will be HF listening.  Personally I go in turns, listening to utes for a while, then maybe getting on the ham bands and chatting for a while.

But don't insinuate that because someone enjoys SWLing that they don't also enjoy amateur radio.  Despite Steve's faults I have seen some good information come from his direction.

Not married, 'tard boy...

Guess some dumb ass MF'er such as yourself better try something new.

Just a thought.

That depends. If you double it back next to the length of wire already run then it will not do much of anything. However, you could make a loop out of it. As an example if you already have a 200 foot run to the back of the yard you could then continue it across the back of the yard and then back to the house.

You would have created a triangular loop with three sides of more than 400 feet. That is a good size loop. The ends of the loop would be connected to the inner and outer coax conductors. Which end loop is connect to the inner conductor probably does not matter except for the local noise it will pick up.

There is an old Country Song that goes something like this, We got marrieddd in a feverrrrrrrr,,,,,, Hotter! than Brussels sproutsssss,,,,,,,, We are going to Jacksonnnnnnn,,,,,,, Look Out Jackson townnnnnnnnn,,,,,,,,

A guy in Chicago once road his bicycle from Chicago to Biloxi (this is True) to visit his sister.Not far North of Jackson an old timer told him to steer clear of Jackson because Jackson is full of prostitutes and
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

politicians and you can't tell the difference between any of them.

Your problem is you're not thinking... you already proved that earlier this afternoon!

Remember, don't bring a knife to a gunfight!

Damn, you're a 'tard.

Nothing as dramatic as that;
My own theory (speculation, more like) is a field
exercise in radio location for small teams.
It would be useful for small operations abroad.
We did a lot of stuff in the 80s and 90s on
HF and in the clear, just because it was handy.

> I also doubt we will ever know what the whole story was either way.

Agreed... Ah, well... It was interesting while it lasted.

Regards,
Dave S.

In and OUT, what are you talking about???
    I only have one jack and I run a long wire and if I run a loop I would
still  only use one end and be sure to slope it so the sigs don't hit at the
say time.

Might be the the same bunch that's been operating what sounds like a
surface warfare net on 4741.5 for the past day or two at local night
(East Coast US), as reported on the WUN reflector. From the sound of
things, you may have found the air defense net. There's probably yet
another voice net somewhere coordinating the LINK-11 (TADIL-A)
operation as well.

What a lying piece of shit. Her story is so full of holes! Read it! It does not hold water in any way, shape, or form.

She states she was against the war, so would she say anything good about the Americans? Of course not. She says they were driving slowly, but they almost lost control of the car avoiding mud puddles! To an Italian, driving slow is anything under 100 mph. She goes on tho say how her mind went to her abducters saying that the Americans did not want her released. In actuality, that is not what they said according to her earlier statements. It what she wished they said. What a boob!

The inner (center) and outer conductor (shield) of the coax. Generally
there will be no preference as to which way the loop is connected.

I don't even think RFO is on the air anymore.
I did QSL them on 11835 back in 1983.

If you have an unbalanced or "half an antenna" or "Marconi type antenna"
that's the right thing to do but not for a balance antenna.

AND,

I run naked wire, copper then splice it to the coax through the wall and around the wires in the house to keep the EMF off the antenna. The ground bleeds  off any EMF that hits the lead.

Burr

I think their last transmitter died a couple years ago. I remember
reading somewhere, maybe Passport, about five years ago that Tahiti's
transmitters were old and worn out and too expensive to maintain because
```

parts for them are so scarce, so that as they died they wouldn't be repaired, and Tahiti had no money to buy new transmitters, so they wouldn't be replaced.

I certainly did...

did you?

I was doing 13 WPM before you were first licensed, 'tard.

And, as usual, you are wrong... it must really suck to be wrong as much as you are!

Is that where you honeymooned? I avoid the place myself.

About two years ago in the Wal Mart stores here,I saw some Oregon Scientific Atomic clocks for sale for about $11.00 each.I didn't buy one because the exact time isn't that important to me.I am sure there are other stores around here that do sell Atomic clocks and wristwatches.I haven't bothered to look for them though.

It's been a fun weekend here in rrs.  But, alas, although you have kept
me somewhat occupied as I've been working on my taxes...I must not
waste any further time wavering around this fine usenet community.
```

A few last thoughtful words for some of you:

dxAss: Remember the words of Charlie Brown in "A Charlie Brown Christmas, who asked; "Don't you know sarcasm when you hear it???"

For Telamon: (Who claims he's killfiled me, but is still watching....) Learn what REAL spam is....and FIGHT IT!  Don't let your hatred for one man cloud your intellectual judgement.

For Burr: The grizzled, grizzly bear of the old west.  Keep fighting the good fight.

For Lloyd, born-again talk show host: Get a date. You'll feel better....

For Denley: (Who also has me killfiled...but is watching anyway) I have a new Native American nickname for you; "Algoniac Saukianuck Potowatta"...which means: "The Quiet Colon Hole"....

And last but not least, for CuHu....
Did you REALLY do Blueberry????

73, take care, God Bless and hasta la vista, baby....

That's 2200 local!  We're UTC +10 here.  And just for the record, it's
a breezy 80+ degrees F here too! LOL

Jack,

Thanks for your input, but I beg to differ with you.  A general radiotelephone operator's license IS required to perform *any* work on comms equipment for aircraft or marine use.  Further, GMDSS repairer or operator is required for using or repairing that equipment, as is a second or first-class radiotelegraph license for most large vessels. Plug-n-play aside, these licenses are still required, and anyone not havig one and working on such equipment is liable for big trouble if found out.  Military is a different matter, as they train and certify their own, but commercial and private aircraft and marine must still abide by the regs (that is, if they are US licensed or serviced in a US facility).

Code is still very useful in an emergency if all other means fail. Indeed, this is why code became a part of ham radio.  When it was being demonstrated to one federal regulator in the early days, the modulator section of the demonstrator's equipment failed and he switched to Morse.  The federal official was so impressed, that it became a part of licensing regulations.  Like it or not, we hams many times find ourselves in emergency situations where we have to relay or report message.  How do you propose to do that if you have no spares and your modulator fails?

I don't use code, but I can in an emergency.  This gives me a nice comfort zone.  Some people prefer to use it exclusively.  But I suspect that it will always be a part of the license requirement. Surely if you possess the necessary skils for electronics, you can master 5 WPM code which is now all that is required.  It's a rite of passage to join the club.

Let us not forget that the license is a *privilege* and not a right, and can be revoked at whim by the FCC.  It's something you have to earn, and the powers that be apparently feel that code is necessary, I suspect, for emergency purposes.

Regards,

Al

Trust you to deflate my cloud of hope! LOL  Well, I don't give up
easy.

Found this cool program on one of the P2P nets called Power Translator
and it does English to Spanish/French/Portuguese/German/Japanese.  It
does seem to do a pretty good job, so I usually write a chatty little
letter and sometimes have decent results.

I can scan the reply using OCR recognition and translate the response
with it too.  Best program I never paid anything for! LOL

I speak fluent German so there's no problem there and the program
rates about a 97% in that language!

regards,

Al

Look, Bunghole, you're in way more threads than I am.  You and the
Nazi from Ypsilanti or wherever  and the WebTV guy seem to feel the
need to chime in on every single thread.

Shortwave is prevented by law from being part of the mainstream media
in the USA.  Limbaugh is a train wreck;  bad, but you can't look away.
The worst thing that ever happened to this country is that people
actually started believing his lunatic spew.

Though radio communications monitoring is fun and interesting all by itself, there is more fun to be had participating in live interactive radio monitoring with colleagues from around the world who share the same interest. Having dozens of ears scanning the bands really adds to the excitement. Having more people on-line means having more ears on the bands. This posting is an effort to add more people to zirc.org #monitor

Entry level as well as experienced listeners are welcome to join.

Read more info about this at at: http://s91586483.onlinehome.us/monitor/

To connect to IRC, you will need an IRC client. Mozzila and netscape have one built in or there are many you can download and install. You will need to connect to irc.zirc.org or pick a server from the website at zirc.org.  To connect, type "/server irc.zirc.org" and once connected type "/join #monitor".  There is a web based client at http://www.zirc.org/chat/

Once logged on, simply start posting what you hear or just be a fly-on-the-wall and watch what other people post and follow along on your radio!

Didn't mean to do that. Just wanted to alert you to the possibilities.

I verified Rwanda via DW... but I'd still like to have a local QSL.

Was that supposed to be:

quitter, the noun

quieter, adjective

or

Quiter, proper noun (It's a Japanese company)

Your one word attempts are even worse than your one liners.

If I understand you then you have a single wire antenna outside the
trailer and you ground the coax shield to the trailer (and other ground
wires) at the point where the wire comes through the trailer wall. This
sounds like a workable random wire antenna based on the fact that the
trailer has metal over most of its surface area.

O Telamon,

I have a house in Ridgecrest, I run a longwire around the eves and into the house. I have an earth ground where I ground everything. I use battery power to run all my radios.

Down south where I keep my travel trailer where I say a few days a week I use a Sony AN-1 and a Dipole on my scanner.

When I take my motor home out I use a Sony-AN1 or a Yo-Yo and sometimes I use the double I got from Bill years ago. I also use "ears" for my CB so I can get road reports.

When I camp in my tent I use a Single Yo-Yo or the built in antenna.

Burr

PS: Sorry Bill didn't say good bye to you!!!!

How about loser?  An informal insult for someone who is unable or unwilling to adjust to society sounds like a good Troll description to me.

Maybe the news group should take up a collection to buy them a used low
power transmitter. I expect the Dx'ers that read the news group would
love that development.

To quote the dxace:  Your nonsensical attempts at a comeback..."

While attempting a comeback dxace managed to call WA8MEA the name of a
Japanese video game magazine.  Well done, and pretty much nonsensical.

Are you planning to turn into a troll and jerk like others I've kill filed.
Why do you want to join the ignorant idiots who think it is okay to insult
another's country by inserting the word "duh". You into country profiling -
a new twist on racial profiling.  Let's see some grown up behaviour mister.

Obviously you play to many games 'tard boy. The majority of us here listen to radios.

Better luck your next turn around.

Wrong. The worst is that as Rush ceased to be shocking, the big media conglomerates started going further and further right (think Michael Savage) in order to keep their ratings up. As big media rushed rightward in search of the ratings that Rush once had, more moderate voices were squeezed out, and soon much of radio became dominated by neofascist shock jocks who told Americans to trust them and not the "liberal media". And since moderate/liberal voices were either a) pushed out/nonexistent b) ignored or c) marginalized, Americans started depending on the right wing shock jocks for their information about the world. This is like having your whole worldview shaped by Radio Havana and Voice of Korea or the konspiracy kooks on WWCR. That dependence on entertainers for news, and Americans not realizing that the shock jocks' "news" was really entertainment and propaganda, was the second worst thing to happen to America.

As soon as CanaDuh shows some 'grown up' behaviour, 'tard boy.

Call your local 'tard boy and girl representatives. Tell them that CanaDuh has to step up to the plate.

Do it, 'tard, or be left behind right where your stinking piece of shit country is today.

Sheeesh... what a bunch of 'tards... get with the program.

Hello Al,

We aren't talking about the licenses required to repair radio transmitters, and I did agree with you in that respect. But those licenses are neither required onboard ship or aircraft nor is there a radio officer aboard who holds them. Except in the case of compulsory GMDSS where there has to be a GMDSS operator OR repairer on board - but he does NOT have to be the one operating the equipment.

There is no code required to OPERATE commercial marine or aircraft radio transmitters, it is a station license not an individual license.  For an individual who privately owns a vessel or aircraft, his restricted radio operators license is for life and applies to any mobile maritime station that he operates from. No code.

Redundancy in all compulsory equipped vessels allows the necessary swapping or replacement of the active transmitters for the job.  There is no repair capability aboard maritime mobile units.  Vessels at sea were the last living reason for any existence of Morse code, and it became history a LONG time ago. That's it, it's the end of the era and should be relegated to the museum. There is no compelling reason for any unit to know it or use it ever again. Hams were required to know code for absolutely ridiculous reasons that had nothing to do with your nice but untrue anecdotal story, mate.

The early federal regulators were all members of that "club" you refer to (originally part of the Department of War), and they imposed that requirement on the hobby to make it difficult for the public to access "their" airwaves. Airwaves which incidentally belong to the public and are NOT a PRIVILEGE granted by the government. The government only has limited powers to regulate areas which so strongly affect the whole public, that without licensing and oversight, could aversely affect the whole public's right to enjoyment of those (highways, airwaves, etc) mediums.

I hate to burst the bubble of those who worked hard to learn code because they think ham radios will someday save the day for emergency communications, but not in the United States they won't. If any of you hams have been following what happened to the SHARES network in the last few years, you're almost out of the picture now. Every US Government agency now participates in SHARES, and amateur members are only allowed to have their net control make a single check-in.  Except for SHARES, the nets that these agencies work in never permit amateurs. Reliable telephone systems, reliable cellular networks, reliable satellite systems, and finally, reliable HF-ALE nets operated exclusively by the government provide most of the communications capability that US emergency planners rely on. CW is not part

of any of that network training or planning, nor was it ever for the last
several decades.  I'm sure you once worked hard to learn it, and some may
still enjoy it. Fine, but let go of the thought that it could ever again
play a useful role in emergency communications. It's an argument using old
logic that simply does not apply to our present environment.

Of course if all the lights really go out, you 20+ wpm hams will be able to
have your own secret-code that nobody else will understand  ;-)

73,
Jack Painter

And that's one of the better ones that I was thinking of. I just remembered I keep handy Popular Electronic's "Communications Handbook" from 1973, which was an annual mostly a buyer's guide that the magazine put out. It lists a price of $179.95 in 1973, and of course had 30-50, 152-174 and 450-470MHz. Unfortunately, it doesn't list any of the portables from Radio Shack, to give an idea of how much less they sold for.

Michael

Globe outs CBC "Promo Girl"

THE GLOBE AND MAIL // March 3, 2005
By GAYLE MACDONALD

Today the truth will be revealed.

The mystery woman called Promo Girl, whose incredibly sexy voice has polarized CBC Radio One listeners for close to a year, is out of the closet.

And she is none other than the smart-talking actress Shauna MacDonald, whose eclectic career includes roles such as Officer Erica Miller on Trailer Park Boys, the demure Dr. Paxton on Shattered City: The Halifax Explosion, and more recently, a minx of a detective named Velma in a short film, The Porcelain Pussy.

Reached yesterday on her cellphone as the Antigonish, N.S.-native rushed into the CBC to record yet another of the hundreds of 30-second spots she's churned out since June, MacDonald said she feels both sad and relieved to be finally "outed" by The Globe and Mail.

"As an actor to not be able to tell anyone about a gig for 10 months -- it was killing me!" says the throaty MacDonald. "But it's really been one of the funnest -- is that a word? Oh, well -- things I've ever done. The mystique's over so that's sad, but it's nice the pressure is off too. Now I can relax a little more.

"I just hope they don't fire me, now that everyone knows who I am."

By all accounts, Promo Girl is loved and loathed by CBC listeners in almost equal measure. Men tend to go crazy for her teasing intros. "I was in Halifax for the Atlantic Film Festival," MacDonald says.

"And, of course, in a bar. And this guy from Newfoundland is like, 'Wow, man, your voice is so familiar.' Then he went, 'Oh my God. You're Promo Girl!' And he nearly lost his shit," laughs MacDonald, who now lives in Toronto.

On the flipside, though, CBC radio host Stan Carew in Halifax recently ran a contest asking listeners to pick the most annoying Canadian. Don Cherry won, but Promo Girl was near the top of the list (ahead of, gasp, Celine Dion).

"One person called in and said, 'I can't stand her. She's got an American accent,' " recounts MacDonald. "Now that insults me," sniffs the actress. "I'm as Canadian Every-girl as it gets."

Yesterday, Mark Thompson, spokesman of CBC English Radio, said he was disappointed Promo Girl's true identity is now known. "People liked how personal she was. People liked the mystery. We kind of wanted to keep it that way." Then Thompson added: "You guys are good at not giving away the endings to movies so why do you have to spoil this?"

Frankly, because we figure Promo Girl's done her duty, and now she deserves a little promo herself for being an irreverent breath of fresh air at the often stodgy public broadcaster.

MacDonald says she figures Promo Girl's detractors were folks who simply don't like change. "And I can commiserate with them," she added. "Heck, I don't like change. It shakes me up when they switch garbage day. I'm like WHAT?! Now it's every two weeks? How am I going to keep the raccoons out of my trash for two weeks? And I have to go out there and sit by the can. I'm as much of a curmudgeon as the next guy," says the thirtysomething actress.

Her fans will get to see her in a serious leading role in the feature film Saint Ralph, in theatres this April. She's also in an upcoming episode of This Is Wonderland.

To date, though, she counts Promo Girl -- superchick of the airwaves -- as one of her best gigs ever. "My friend's dad is [Maritimes-based author] Sheldon Currie [who wrote Margaret's Museum]. He says he loves Promo Girl because she's got the right amount of wry.

"Or is that rye?" ruminates MacDonald. "Hell, even better," she hoots. "It could be both."

```

The Other Smokey,
 .
Q # 1 - Can you first tell us 'what' Radio/Receiver
that you are using this 200 Foot Wire Antenna with ?

.

Q # 2 - Are you using a good earthen Ground with
this 200 Foot Wire Antenna ?
[ Ground Rod and Wire ]

.

Q # 3 - What type of Feed-in-Line are you using
with this 200 Foot Wire Antenna ?
[ ]  Plain Insulated Wire
[ ]  Twin Lead
[ ]  Coax Cable [ ] 50 Ohm [ ] 75 Ohm

.

Q # 4 - Are you using a Matching Transformer between
the Wire Antenna Element and the Feed-in-Line ?

.

.

"PORTABLE" AM/FM SHORTWAVE RADIOS :
If it is a 'portable' AM/FM Shortwave Radio; you may
find that 200 Feet is too much Antenna for the Radio
and less is better.  Tip, if you are hearing local
AM & FM Radio Stations all over the Shortwave Bands :
Then trim the Wire down to 135 Feet and try again.
Followed by 90 Feet, 60 Feet and 40 Feet if needed.

.

Consider using the "Portable Wire Antenna" (PWA) with
your 'portable' AM/FM Shortwave Radio.
- by Tom Sevart [N2UHC]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1728
GoTo=> http://www.geocities.com/n2uhc/portablewire.html

.

"DESK TOP" SHORTWAVE RECEIVER :
If it is a "Desk Top" Shortwave Receiver; you may find
that 200 Feet Wire Antenna is just about right and no
more Wire is required.

.

.

DOUBLING-OVER {FOLDING} THE "RANDOM' WIRE ANTENNA ELEMENT.
NOTE - Since your 200 Foot Wire Antenna is Rigged to
fill the Available Space and NOT "Cut" for a Specific
Frequency : It is simply a "Random" Wire Antenna

.

SPACING (The Gap) BETWEEN THE TWO WIRES :
As far as Folding the Wire Back-On-Itself for a
return-leg of another 200 Feet; this can be done
provided that you create a good amount of
separation (Gap) between the Top Wire and the
Bottom Wire.  Usually this "Gap" is a function
of the Heigth of the Top Wire.
*  Top Wire Under 12 Feet High = Single Wire Only
*  Top Wire About 15 Feet High = 12 Foot High Bottom Wire
*  Top Wire About 20 Feet High = 16 Foot High Bottom Wire
*  Top Wire About 25 Feet High = 20 Foot High Bottom Wire
*  Top Wire About 30 Feet High = 24 Foot High Bottom Wire
*  Top Wire About 35 Feet High = 28 Foot High Bottom Wire

*  Top Wire About 40 Feet High = 32 Foot High Bottom Wire

.

MAKE THE TOP WIRE LONGER AND
MAKE THE BOTTOM WIRE SHORTER :
Figure that the Top Wire is 62% of the Total Length
of the Antenna and the Bottom Wire is 38%.

*  Top Wire 35 Feet and the Bottom Wire 22 Feet + Gap
*  Top Wire 50 Feet and the Bottom Wire 31 Feet + Gap
*  Top Wire 65 Feet and the Bottom Wire 40 Feet + Gap
*  Top Wire 80 Feet and the Bottom Wire 49 Feet + Gap
*  Top Wire 95 Feet and the Bottom Wire 58 Feet + Gap

For Longer Length (Larger Size) Wire Antennas multiply
any of the above sets of numbers by two or three.
Or think of the relationship between the Two Wires as for
every 15 Feet of Top Wire there is 9 Feet of Bottom Wire;
plus the Gap.

.

.

- - - - - THE - BETTER - IDEA - - - - -

THE LOW NOISE SHORTWAVE LISTENER'S (SWL) ANTENNA :
The Better Idea then to Extend the Length of the Antenna
may be to reverse the lay-out of the Antenna from Front
to Back and use a long Coax Cable Feed-in-Line.

*  Run the RG6 "Quad" Coax Cable with a Side
Ground Wire along the ground or under the ground
directly 'under' the run of the Wire Antenna Element
to the Far-End of the Wire Antenna Element.
*  Install an Eight Foot Ground Rod directly under the
Far-End Point of the Wire Antenna Element.
*  Install a 9:1 Matching Transformer directly on the
Ground Rod.
*  The Wire Antenna Element will go "UP" Vertically from
the Ground Rod and then "BACK" Horizontally toward the
House/Shack. [ Forming the Inverted "L" Antenna shape. ]
*  Connect the Wire Antenna Element and Coax Cable
to the Matching Transformer.
*  Connect the Near-End of the Coax Cable with an
Adapter to your Radio/Receiver.

.

RESULT - This is a Low Noise "Random" Wire Antenna
in the Shape of an Inverted "L" Antenna with the
Coax Cable running directly under the Wire Antenna
Element functioning as a Ground Radial. This is the
basic SWL Antenna that uses the "Low Noise Antenna"
'design concepts' that were {popularized} by John Doty.

.

Here are Three "Must" Links to Read -wrt- Low Noise SWL Antenna
*  Low Noise Antenna Connection
http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html
*  Longwire Impedance Matching. {Check-Out the Graphs}
http://www.anarc.org/naswa/badx/antennas/SWL_longwire.html
*  Grounding is the KEY to Good Reception
http://www.anarc.org/naswa/badx/antennas/grounding.html

The folks at Lowe UK were nice enought to steer me in the right direction
with my carrier injection problem. Any of you Lowe folks, take note!
Apparently, Q4, the carrier generator (MC14569) is being run near its design
maximum. Out of 10,000 units, I was told that 12 of them have failed because
of this chip.
I let the receiver run for about 15 minutes and the carrier injection
problem showed up in the form of the BFO frequency being drastically

shifted. I cooled the chip and normal operation of the receiver resumed.
After 2 more minutes when the chip heated up again, the problem surfaced again. I cooled the chip once more, and once more, the receiver resumed normal operation.
The Digi-Key part number is: MC14569BCPOS-ND They have 1743 of them in stock at a price of $2.47 if you order less than 25 pieces.
This receiver was a stumper, but since it is only a collection of parts, it was inevitable that would eventually get fixed. Now, if only Radio Shack has that part in stock.....................................................

Pete

No death penalty in liberal Canada, so the taxpayers there will have to support this mutant for the rest of his natural life, when in reality, he should be taken out to a firing squad and terminated with a 20 cent bullet.

The AOR Loop is a good idea. If you can afford the loop, I suggest you go for it and you'll get a big improvement in reception on your 7600.

If you object to spending so much money on an antenna, you can spend significantly less (less than a hundred bucks, I think) on the Sony AN-LP1 active loop antenna. Probably not as good as the AOR, but a lot cheaper. It would also improve your reception significantly.

Steve

In my experience, it's not too hard to get a listenable signal on many of RAE's Spanish language broadcasts. It's only when they begin the English broadcast that reception starts to fade (it figures, doesn't it?).

The exercise on 6230 still seems to be underway at 1325.

Also hearing what appears to be an Australian coastal wx broadcast on the
frequency at 1330.

For all our readers,

An update file for WRTH 2005 is now available for download at the WRTH web site,

www.wrth.com.
The file is pdf document and you will require the free adobe acrobat reader 5 or above to read it.
Please follow the simple instructions

on site to download.
This file contains the latest
International broadcaster updates,
schedule
changes and new stations for the
winter (B04) season. The file is just
over
100k so won't take too long to
download.
New/changed entries are marked in RED so they are easy to identify.

Regards,
Sean D. Gilbert G4UCJ/G4001SWL

Chances are it is an image signal beacause RHC is broadcasting then.
The combination of a modestly priced but very sensitive receiver and
big antenna means you are probably getting repeat signals all over the
dial. Because the 350 is an analog receiver with a digital display my
guess is that the receiver is actually tuned to 1700 +- 10.

Try listening to these RHC frequencies to see if the signal is the
same.
6000, 6060, 9550, 11760

It's a nice radio in many respects, but it has limitations that are a
fuction of it's price. More than one review I have read complain about
multiple images, poor dynamic range, etc.  Get rid of that long antenna
and use the RF gain to control signal strength.

The Wellbrook is definitely a balanced amp, but I've not
heard of someone who's either reverse engineered it or
built an approximation of one, as the demand would be
pretty good, I'd imagine.

I got a very nice response for a report on 15,172.5 (v) in 1988. It
was very weak in Houston then. I managed to hear a couple of Beatles
songs through the noise for my report. That was during my R-390A 120'
random wire days.

An MFJ-956 between the radio and the antenna may help.

> And now I'm hearing a memorial to Gene Scott on 1615 (MW, of course) at 0555 UTC.  It's identical to the broadcast that I'm receiving clearly on 5755 (KAIJ, TX)

You're receiving the 5755 transmission on 1615 because of the third harmonic of the radio's local oscillator.  (i.e. they are NOT actually transmitting on 1615)

When you tune to 1615, the radio tunes an internal oscillator to 2070KHz.  This 2070KHz signal is mixed with the 1615KHz signal (if there was one).  You get four outputs:  1615, 2070, 2070+1615=3685KHz, and 2070-1615=455KHz.  The selective circuits in the intermediate frequency amplifier only pass the last signal at 455KHz, and that's what you hear.

But the internal oscillator is not perfect.  It generates "harmonics" on multiples of the frequency to which it's tuned.  2070KHz, 2070x2=4140KHz, 2070x3=6210KHz, 2070x4=8280KHz, etc...  (they get weaker as the multiplier increases)

If any of these multiples can mix with a signal to generate 455, then that signal will be heard as well.

And in this case, it can.  6210-5755=455.  The KAIJ signal will mix with the 3rd harmonic and will be heard.

Your reception of Cuba on 1697 is probably from the same phenomonon.  I

note that when tuned to 1697KHz, the local oscillator is on 2152KHz.
2152x3=6456, and 6456-6001=455. So if Radio Havana was broadcasting on
6001KHz, you'd hear it on 1697. Monitoring Times does list Radio Havana
as being on 6000KHz at 0530z.

Associated Press
Boeing Ousts CEO Due to Relationship
Monday March 7, 9:42 am ET
By Dave Carpenter, AP Business Writer
Boeing Board Ousts Stonecipher As President and CEO Due to
Relationship With a Female Executive

CHICAGO (AP) -- Boeing Co. on Monday said its board forced out president and chief executive officer Harry Stonecipher because of a relationship the married, 68-year-old Stonecipher had with a female executive at the company.
ADVERTISEMENT

The unexpected ouster makes Stonecipher, who spent just 15 months in the top job, the second consecutive CEO to depart the Chicago-based airplane maker and defense contractor in disgrace.

His predecessor, Phil Condit, resigned Dec. 1, 2003, as a result of the defense contracting scandals that ultimately sent two Boeing executives -- ex-Air Force procurement official Darleen Druyun and chief financial officer Mike Sears -- to jail.

Chief financial officer James A. Bell, 56, was named president and CEO on an interim basis.

Boeing shares fell 88 cents, or 1.6 percent, to $57.50 in early trading on the New York Stock Exchange.

Boeing said an internal investigation prompted by information sent anonymously to chairman Lew Platt and the company's legal and ethics leaders 10 days ago revealed a "consensual" relationship between Stonecipher and the female executive that the board determined was in violation of the company's code of conduct.

"The board concluded that the facts reflected poorly on Harry's judgment and would impair his ability to lead the company," said Platt, who is to assume an expanded role at the company.

He said the requested resignation "was in no way related to the company's operational performance or financial condition, both of which remain strong."

Spokesman John Dern said the female executive, who was not identified, did not report to Stonecipher and remains with the company. He declined to provide further details.

"This raises a lot more questions than it answers," said analyst Richard Aboulafia of the Fairfax, Va.-based Teal Group.

Stonecipher also was dismissed from Boeing's board, which he had been a member of since joining the company from McDonnell Douglas when the two companies merged in 1997.

The tough-talking son of a Tennessee coal miner, Stonecipher had been credited with helping Boeing to clean up its ethical behavior and with improving its sullied reputation in Washington. The company's stock surged 52 percent during his tenure.

He also is one of its largest stockholders as a result of the McDonnell Douglas deal.

Stonecipher failed, however, to win back the tainted $23 billion air-refueling tanker contract that the Pentagon pulled from Boeing because of conflict-of-interest violations involving Druyun and Sears.

He turns 70 in May 2006 and had been expected to retire early next year.

Stonecipher and his wife, Joan, are well-known contributors to the arts in Seattle and to some colleges, including Tennessee Technical University, his alma mater.

So I guess folks who are sufficiently handy to do repairs in their
HF-150s could do worse than sticking a heatsink onto the MC14569 while
it still works fine?

Stephan

Yes, and I'll jump in with a third.  The DE1103 is also proof that
Kaito can design good performing inexpensive radios.  If they go
up-market they will have to consider receiver performance as well as
the numerous features we all want.  Dynamic range, selectivity and
image control become a whole lot more important in the over $500.00
price range that the DE1108 will probably price out at.

>But this went on for a very long time, using a lot of equipment.

But it probably isn't a lot of equipment.

Back a few years ago, ARRL's QEX newsletter printed some stuff about government proposals for new radios that were the High Frequency equivalent of a trunking radio system.  These were frequency agile highly automated radios that figured out for themselves how to establish a connection on each end, no matter what the conditions.

Sounds like somebody was messing around with a prototype.

Well Capt -  it is an auction
The bid started at $19.95
The bidders perceive value here (not you I suspect) (Or I for that matter)
but what do we know?
So the current bid is $630
It is called free enterprise
Don't ya luv it?
You really don't want price fixing -- do you?

Collectors have a whole different set of reasons for buying a radio than users.  Compare the price for that radio with the $600.00 for an FRG-7, $800.00 for a Sony 6800, $3,000 for a SonyCRF320 or $800.00 for a Zenith TO.  Prices no user would contemplate, but several collectors would not blink twice at.

The Sony you mentioned was one of many luggable radios in it's time. It probably priced out lower than but was meant to compete as a reasonably priced alternative to the Panasonic Rf-5000a, Zenith TO, Nordmende & Grundig offerings.  All were reasonable performing radios in their time with notably pleasant audio - much mellower than anything found today.  In all cases time will have taken a toll on their electronics and there's a good chance controls will be noisy, dial accuracy will be frustrating, plastic started to fade, etc.  For my purposes the Sony would be fun to use for a while, but that's about it.  That there have been 32 bids to date tells me there's more than one collector that have a different view.

A friend's dad had a huge collection of receivers from the late 50's until he died in 1981, and this was one of the portables. The Sony wasn't great when it was new, let alone now...

Here's something that went for a sane price...not bad.

I bought the radio at a Service Merchandise store about 25 years ago.There are three jacks near the bottom of the radio,EP/EXT SP IMP 3.2 8 (and that little symbol thingy that looks sort of like an upside down horse shoe (Ohms?,I think,Hey,MR.Tiny-Tenna said I don't know what a resistor is,that makes him smart and me dumb,eh? Not me! I am a REPUBLICAN! I was dumb enough to buy one of his worthless no good Tiny-Tennas but that will never happen again.I bought five resistors and a variable whatever it is at a Radio Shack a couple of years ago for something I was going to build but later on I forgot all about it) is next to the 8) the next jack says, MPX OUT and the third jack says,REC OUT.The radio also has a AM/SW RF GAIN switch and around the knob on that switch it says on the right,DX and there are numbers around the knob that range from 0 to 10 and next to the 10 it says LOCAL and to the right of that switch there is another switch with a knob on it and above that swtch it says,BFO PITCH Next to the BFO PITCH is a little tiny toggle switch and above the switch it says,BFO and under BFO just above that switch it says,OFF and under the switch it says,ON.Next to that switch is an identical looking little tiny toggle switch and above that switch it says,BAND WIDTH and under where it says BAND WIDTH it says,WIDE and under the switch it says,NARROW (I sound just like Tex up there in that Church Belfrey in the Kelly's Heroes movie) Just above that switch there is a knob and above the knob it says.SW CAL.Can anybody explain the functions and what those controls are used for? It is an AM/FM/Shortwave radio and the shortwave bands range from,SW1 3.9-10 and SW2 10-16 and SW3 16-22 and SW4 22-28 On the front of the radio under the speaker it says,BEAT FREQUENCY OSCILLATOR SSB/CW The little owners manual I have that came with the radio doesn't hardly explain anything about those controls.Of course there are other controls on the radio I understand about such as,Power off and on,Light,Digital display,(the radio also has a horizontal dial with the different bands displayed on the dial and the dial rotates as I turn the tuning knob) Volume,the big tuning knob,the selector switch knob for selecting the bands,Bass,Treble.Thanks for any information.
cuhulin

I heard one guy mention "ASW ex" Which is probably an Anti Sub Warfare practice operation. This was on 6230.

I thought the #Monitor group closed up shop and moved to #Wun? I stopped going after a very childish incident caused a "Split" to two rooms... very childish.. I have very little time for that kind of nonsense.

BTW thx for the 4741.5 frequency, I guess this is where the guys on 6230 hang out during the night?

And how regular are these USB nets? I only run into them once a year or so during operations.

Regardless, it is VERY interesting listening.

No kidding. The typical hotel cleaning lady would think that it is worth
much more than it really is, so she'd grab it in a heartbeat. I got my

order confirmation via email this morning-$46.90 with shipping, unless you're in Pennsylvania then you have to add sales tax (I'm not, so it's not a problem for me). I'd love to set it to receive the Japanese signal and see if it actually can. By the way, I noticed that Atomic Time (atomictime.com) sells a European clock that works on the German VLF signal.

Excellent radio for it's time.  If you get good with the BFO you can
it to work on SSB.

I took a listen down there this morning for a short time around 1330 but didn't
hear anything, could have just been propagation, so I'll try again this evening.

> And how regular are these USB nets? I only run into them once a year or

Seems to happen a few times a year, if and when someone locates them.
I still can't find that site I used to have that would announce the exercises,
and tell what they were about. Maybe they dropped it?

The Bandwidth wide narrow is used when two stations are close together and interfering.
In the narrow position the bandwidth is narrowed to help eliminate the interfering station.

SSB is Single Sideband suppressed carrier transmission, see URL:
http://www.williamson-labs.com/480_ssb.htm
To receive SSB, the carrier must be inserted at the receiver -- this is one the functions of the BFO.
Tune to the upper portion of the Ham bands and turn the BFO on and off to hear how it works on  the SSB signals.

For CW reception you are receiving the carrier only -- thus to hear a tone -- the BFO beats against the signal to give an audible tone which can be adjusted for the desired frequency by using the PITCH control. Tune the lower portion of the Ham bands

The MUX OUT is probably an output to be connected to a FM demultiplexer to receive FM stereo. Just a guess on this one.

The "upside horseshoe" is indeed ohms -- speaker impedance.

RF gain adjusts the front end receiver gain -- reduce gain for strong stations to prevent overload -- increase gain for weak DX (distance) stations.

That's the preselector I believe.  Yes, it could help, although in my experience just reducing the antenna size will help too.  Those little radios usually work pretty well on the whip alone.

6230 frequency is active at the moment, I've been recording on video tape for my sound byte collection.. 10 hrs I got atleast .

I would try the 4741 freq but I work overnights so I cannot.

Frankly, I have the room for a full 80 meter dipole in my back yard, and when I'm listening portable I take some wire with me, so I'm not concerned with small, active antennas.

I may be a purist, but I just don't think that any short, amplified antenna can work as well as a long, passive antenna.  The shorter antenna will eventually miss part of the signal.

A quick visit to your web site turned up a bit of a problem.

There is a photo of you on it. That's ok, however next to it is a quote and link.

```
======================================================
all is vanity, and vexation of spirit... Enlarge Photo
======================================================
```

This would seem to be self contradicting.

Use a kill file. A stinking Troll can post 1000 a day and it won't
matter to you. Ignoring Trolls works. We just had one come and go in
record time. He probable would have left even sooner if the one or two
people still responding to him would have stopped. These jerks live to
get a rise out of you and will leave if ignored. ignoring them deprives
them of their "fun."

Firefox has "chatzilla" for IRC. I made it to the chat room with only one hitch. Namely, the chat room doesn't appear in the list of available chat rooms. Otherwise,  telling chatzilla to go to #monitor worked just fine.

I haven't use #monitor for at least 7 years. It was on a different server back then. There isn't a whole lot of chat, which is good. Once in a while someone types a frequency for a numbers station, or notes when GHFS is active.

```

Is there any way you could put the plans online?  Not that I'm interested in building one but would be interested in seeing the schematic.

Well personally I'd prefer it if all the political nonsense and "'tard" comments were kept out of here and only radio-related issues discussed.  But what ya gonna do?  The only way to stop it is to totally ignore it, but nobody does.

This particular board (the local one) is Web based and doesn't have a killfile. However, you can "flag" individual posts for removal by the admins, and they can ban certain email addresses. On here, I can easily ignore certain posters without a killfile since on usenet each article has to have an "author name" and the vast majority of trolls aren't smart enough to keep changing it. The smarter ones keep changing their email addresses to avoid killfiles, but not their author names. So their posts are easily recognizable and ignorable. I should take my own advice and stop responding to political posts, I tend to be rather passionate about politics but this isn't the place for it.

I will. Usually I don't wake up early enough to do some DXing, but I will be doing so in the future most likely, so I will be posting more logs. Usually I just focus on one band a day and write down everything I can hear on that band, which means my logs are a mix of big boys and small stations.

WFOR was (is?) a small 250W AM station in Hattiesburg, MS (FORrest
county). WFOR-TV is in Miami, no connection I think.

Sorry David your personal  political views are showing....I'm talking about the sound of the station. If KFI was "left wing" it would still be the best sounding station in LA nothing to do with politics,,,they do everything the correct way and tied for number #1 in LA. rc

Multiple personality disorder? This should be interesting. Apparently we have two m II's on this board, one claiming he's gay (there's a gay SW station?) and the other one telling dxAce to stop forging his posts. I personally don't think it's Ace but the "Cupid" guy who was here a few days ago spewing stuff about certain regulars being gay.

Australia used to have a VLF version of VNG, but the transmitter died and the Australian government decided not to replace it. I understand that atomic clocks became very popular in Oz over the last few years, and that closing down VNG made them all useless junk.

WWVB has a coverage area extending over most of North America, so anybody in southern Canada, the continental US or northern Mexico can buy a WWVB-set clock and get fairly good reception. I don't know about VLF-set clocks in the UK, Germany, or Japan, but here in the US such clocks are very popular and can be bought at most electronics stores and even some drugstores (I heard that the Walgreens chain was selling them). Another place to buy WWVB-set clocks is atomictime.com, which is where I bought my dual time flat panel (either wall mount or desktop) atomic clock which shows both my local time and UTC (the only atomic clock I could find that has that capability). I bet Atomic Time also has the Seiko clock.

I've been listening to Voice of Greece for the past hour or
so on 5865, and it's coming in fairly well.  Not the greatest
reception I've had for them, but better than most.

The Patrolman line was a very good line of VHF receivers, sold by Radio
Shack in the 80s. I used to have a 60. Randomly tuning across the VHF
bands isn't likely to yield much, unless you know where to look-the band
was used by public services such as police and fire departments, but
most of those have gone to "trunk" frequencies and abandoned VHF, one of
the reasons I got rid of my Patrolman.

Please elaborate on why you think the Wellbrook is better than a well
built inverted-L with a good grounding system, a la 'Doty'.

I can't even picture it, but given that it's analog, it's not likely to be very great.

Or rather, it's not so much that it's analog as that the analog tuning dates it, to a time when such receivers weren't so great.

The average "police band" receiver from the analog era wasn't particularly great. They'd have a relatively wide IF passband, and many designs were just reworked from FM broadcast band designs. They likely had more than ample sensitivity, especially given that VHF is line of sight only. Tuning was usually full of backlash, and the tuning scale hardly accurate. They were generally for non-serious listening "Oh look, I can hear an ambulance" beause the nature of the "police bands" meant that often the frequencies were not in constant use, at least away from the big cities, and if you wanted to hear things you need to be constantly retuning. By the time you were on to another frequency in use, you'd likely have missed much of the transmission.

There were exceptions, receivers with an attempt at a better tuning scale and a good IF filter, but I'm not sure any of the Patrolman's qualified.

For much of the analog era, if you wanted a serious receiver you went to a crystal controlled receiver. Tended to be more expensive, but it would also bring a better quality of receiver. You needed a crystal for every frequency you wanted to tune, which meant you'd only be listening to a few frequencies, but you could instantly switch between them.

The next step up was receivers with scanning capacity added. These were still crystal controlled, but circuitry was in place to switch between the crystals, faster than you could turn a knob. So you'd miss very little of a transmission.

Those came around in the early seventies, and they did tend to have good IF selectivity. You'd also pay more than the usual analog tuned "police band" receiver.

Then in the late seventies, synthesized "police band" receivers came along. No more crystals, but every desired frequency was there, and instantly available, with no fussing over tuning. And they were all scanners,

so you could be constantly checking as few or as many frequencies
as you wanted.

  Michael

I have a big wooden case octagon shaped Ansonia clock on my living room
wall and it has a pendalum that goes TICK TOCK.It has been in family for
longer than I can remember.It loses about one or two minutes a week but
it isn't any problem for me at all to step over and open the glass door
and adjust my clock.Atomic clocks and wriswatches are nice but I
wouldn't take anything for my old clock.TICK TOCK TICK TOCK.

Hard to describe...sort a schweep sound followed by three tick sounds. Very steady and evenly spaced. It's as steady as a metronome with the schweep on the 1, and ticks on the 2 3 4. It of course repeats, a little faster than 4/4 time. I'm picking this up in Seattle by the way, and none too clearly. Is anyone else receiving this? Any idea what it is?

I can assure you, the problem would lie with your explanation, not my
ability to understand.

I'm unfamiliar with the term. If it's a WebTV reference then not only do I
feel no shame, I'm a little bit proud.

Has anyone ever posted a schematic of what they believe is the design of
the encapsulated amp' of the Wellbrook-330S?

It's now 0505 UTC, and the ticks faded out over the last few minutes. (They were a wee bit fainter than the other sound.) About one minute ago the "schweep" sound faded as well. (Schweep...that sounds SO scientific.) My point is that it continued past the top of the hour, and since it's faded altogether (at least here) I'm less inclined to think that it was some local interference. Just some clues for anyone that can help me identify this.

I searched the net for an hour...and finally, bingo.

http://meganscrafts.com/product_atomix_seiko.html

Look at the third clock down, that should be the one. At $40 I'm tempted to buy myself one, even though I won't be traveling to the UK, Germany, or Japan anytime soon. It looks like Japan has two VLF time transmitters.

It's Sunday here in Seattle, 0530 UTC and I'm picking up Radio Havana Cuba on a Grundig S350 with a 70' random wire antenna tuned to ~1697 KHz. (The signal drifts a tiny bit, between 1696 to 1698.) I've tried to do my own research and see if perhaps they broadcast on MW as well as SW, but I can't find any indications that they do. They're also frequently mentioning that it's a shortwave broadcast...so through what bit of electronic inadequacies on the part of Grundig am I hearing this on MW? I understand images to a degree, thanks to r.r.s. Is this a related issue? Thanks in advance.

Well I meant that I couldn't differentiate it from
all the other radios that were issued under Radio Shack's
"Patrolman" brand.  It actually looks a lot like I'd picture
it, and I doubt it's a particularly good performer.

I seem to recall that Radio Shack did use the "Patrolman"
name for some single band non-portables in the early seventies,
that might be a cut above the average "police band" receiver.

Well that's a bummer. Maybe your software will allow you to sort the
messages by author and then you can just grab the troublemakers
messages and delete them.

I'm no Dx'er. I do like to scan the bands to see what is around but
most of the time I generally listen to the big boys. It's always good
information to know what other people can hear big or small.

I agree...............I have both the AOR7030 and the Lowe HF-150. Although the 7030 is good, the HF-150 does have higher overall gain. I think this is because they are using the full capabilities of the SL6700 I.F. demodulator chip, while in the 7030, AOR is only using the I.F. amplifier/demodulator portion of a TDA1572 chip. The 1572 is a very good device, but it helps when you use the on-board RF amp and the on-board mixer.
I am using the 1572 in my MW receiver and the receiver has that same type of high gain that the HF-150 has.
Now, if I could only figure out the SSB problem with my '150. It works fine for the first 15 minutes, but after that time the oscillator seems to skew. It appears to be the 4094 shift register/DAC that has the problem. Once I figure things out, I will post my findings to the NG.
I guess I can use it in AM mode for the time being.............................

This isn't a criticism but I thought you posted that you are an EE so
why not make your own instead of copying someone else's work?

And now I'm hearing a memorial to Gene Scott on 1615 (MW, of course) at 0555 UTC. It's identical to the broadcast that I'm receiving clearly on 5755 (KAIJ, TX)

I see that according to http://www.drgenescott.com/swave.htm the Caribbean Beacon transmits on 1610 KHz. Are they retransmitting from another location, or am I really picking up an MW broadcast from Anguilla? And if I am, why am I picking it up on 1615 rather than 1610? Is this a technical error on their part?

As an aside, I must say the Widow Scott has a nice sounding voice. ;)

New XP2500A
The World's #1 Digital Satellite Television
Receiver Descrambler is Now Available to you!!!!!

Order Yours at: http://www.fta9000.3322.org

No Monthly Subscription Charges of ANY Sort!
No Service Contracts of ANY Sort!
No Telephone Connections of ANY Sort!!!!
Does NOT use ANY Sort of Satellite Access Card
The World's Number One "Cardless" Satellite Receiver!!!!

A NEW Product for the NEW Year of 2005
Our New XP2500A Digital Satellite Television Receiver Descrambler allows you to
view at your convenience the following with the USA, Canada, Cuba, Bahamas,
Jamaica, Virgin Islands and Mexico:

View Over 600+ Digital Television Stations FREE! (Everything!)
View Over 200+ Digital Commercial Free Music Stations FREE !(all categories)
View Over 40 Pay-Per-View Movies Channels FREE!
View 8 HBO's/5 Cinemax's/10 Showtime's/8 Starz, etc. FREE!
View Seven Adult Channels FREE FREE FREE � 24 Hours A Day (Non-Stop Action)!
Boxing/Football/Soccer/Baseball/Basketball � ALL Sports Packages FREE (With No
Black Outs)!
Receive Home-Town Local Broadcast Television Stations from 4 Time Zones
Use this New Television Descrambler at Home/Office/Truck/RV etc.
Works In the USA and Canada � plus ALL of North and South America and Territories!
Works on: Nagravision, Seca, Viaccess #1 and #2, Irdeto One and Betacrypt Digital
Satellite Signals!!!!

NOTE TO AUSTRAILIANS: We get many request about the Australia�s "Foxtel Channel". Our New XP2500A Receiver works nearly ANY where in the world - but it will NOT receive "Australia�s FOXTEL Broadcast Channel" as of yet.....they use Irdeto #2 a Decoding System.....so wait patiently - our Descrambling Technicians are working HARD on this one, to brake the code.
International Customers.

Our NEW XP2500A Digital Satellite Television Receiver - NOW UNSCRAMBLES THE FOLLOWING SIGNALS:

I can't recall RAE ever being heard really well in the northeast US.
They have a history of poor reception in North America even though they
should be heard well most of the time, given their power and location
relative to NA. It's probably the result of a mediocre transmitting
antenna and/or improper transmitter operation with the antenna.
Try to get some or all of your antenna outside where it can catch a
better signal.

It depends of course. It depends on where you live and how noisy the
property area is electrically. Where I live an inverted L works like
crap and the same goes for random wire. Now for someone like DxAce in an
electrically quieter area a random wire about 10 foot off the ground
works just fine.

Where I live an antenna that is sensitive to the electric field
component also does an excellent job of picking up all the TV's and
their satellite dish down converters and light dimmers. I have a much
better signal to noise with loop antennas. Even a folded dipole works
much bette where I live. If I owned a small active loop I would find the
quietest spot on the property and place it there. I expect it would work
better than what I'm using now.

As you may have read here Pete, my R8B now has a blue display. I removed all of the green backlight LED's (56 of them!) and replaced them with four white ones, which are mounted in holes at each end of the display frame. They are powered from the 10-V source with current limiting resistors. The R8x's LCD has an inherent blue color when it's back lighted with white light. The charecters appear white on a blue background. I like it much better than the sickly OEM green.

That sounds like a cool looking combination. It's pretty good to personalize
the radios!

Pete

Probably, my favorite was the Pro 3A..........this unit had a crystal filter for the NBFM mode, but unfortunately, the dial had a bit of backlash and the LO had pretty high phase noise, as evidenced by an increase in the noise floor when tuning close to a strong signal. It is still sitting in my basement..........I have to repair the UHF front end.

If you have a warmup problem it could be a power supply voltage regulator. Some change the regulated voltage if they get to hot and the circuits they power shift with the voltage. Simple things first.

Did you every wonder why it sounds so reasonable for people on this NG to complain that some conservative political post is off topic (even if it concerns a shortwave related show issue), and for them to read you the riot act concerning the purpose of the NG, concerning supposedly equipment related issues, only to have threads of 30 or more postings of one person calling another 'tard. Yet no one complains that they are wasting bandwidth, or that their postings violate the spirit of the shortwave NG.

Kind of makes you wonder. Part of the mystery is that the people that complain of wasted bandwidth are the ones that most waste bandwidth. I especially like the <Plonk> notifications, like anyone really cares that some individual wasted bandwidth to let the world know that he no longer wishes to receive postings from so and so. Asinine.

No one is worried about Bandwidth, they simply don't wish to read posts that offend them, or that cause them to need to think, or they wish to uphold the time honored political correctness so widespread today.

Just an observation. I'll filter this post after I post it, because it will be filled with the same 'tard comments that are running rife on this NG.

>

Apparently the only witnesses to this event were the soldiers and the people in the car (the journalist and the two agents, one of whom is now dead and can't give an account). The soldiers say one thing, the journalist says another, and it's her word against theirs. I doubt we'll ever know what really happened unless some Iraqis come forward who saw it. The only part of the journalist's account I've heard was on Radio Havana which said the car was not speeding. If that's the best she can come up with then most people will believe the soldiers, case closed.

While any open sourced digital recording ability would be GREAT, I'd prefer mpeg4 or AAC format for its better quality in a smaller file. However, as a beggar, I won't be a chooser!

I'm already putting a few bucks away a week for this radio when it is rolled out.  I love my Degen 1102 and would have no qualms about buying another product of theirs.

If they really were intent upon simply killing everyone, who would know?

Fact is, they didn't.

Dumb SOB's didn't have a clue as to what they were doing and they screwed up. When
someone says stop, especially in that area, you stop. If that 'tard boy was indeed
an
Italian Agent, then he should have known better.

You need to wake up to the facts, 'tard, and listening to Radio Havana is not a
really
good place to get the 'facts'.

This is of course international news. I heard the story on Radio Japan
that gave both sides of the story on 17,875 this morning.

Keep in mind that the female journalist in question writes for a
communist newspaper in Italy when listening to reports on stations like
RHC. She is going to be biased against the USA.

She also either changed her story or was trying to change a
misconception from previous interviews. I am at the point where I
consider her report muddled at best.

In addition don't forget she was part of the action instead of being a
witness to the event. This makes it difficult at best for someone to be
"objective."

WWVB coverage outside North America is very limited,  poweroutput is
about 30Kw IIRC.

However there are 3 other VLF time stations, and Seiko builds a travel
alarm clock that can pick up all of them.  There is one in Colorado
(WWVB), The ones in the UK, and the one in Germany are both fairly low
power, and the fourth is in Japan. I used all 4 of them.

Welcome to the 'Net! LOL

I post my logs on occasion too, but really, how many people actually read them to correct them.  I look at others logs to see if 1) they're anywhere near me, and then 2) if theyhave something rare, whether I can hear it.

The thing about the 'Net is that everyone can get rude, nasty and ugly, things that they cannot do in real life for one reason or another.  That's the big attraction.  Oh, and don't forget the supposed "anonymity" factor.  Some people delight in tormenting others because they feel they can not be tracked down.  This is true only in few cases.  Most folks aren't thorough enough.

You can be anyone you want on the 'Net, and can stir up a shitstorm the likes of which the world has never seen.  Just witness the posts here.  Some folks think for days on a question to pose that will generate such a maelstrom of replies.  This is their life.

Me?  I'll stick to posting and reading logs, Dogg! :-D

Al

Tebojockey (ASA Lives!)

Thanks Bill!   Great reading as usual :)

(hey, wheen are you gonna check
into the Liberty net again some Saturday evening?
ain't herad U in a coon's age!)

and now, a little diddy from Across the Pond.  (enjoy!)

+ + + +  - - - -

The lady of the manor,
Was dressing for the ball,
When she spied a highland tinker,
Wanking up against the wall.

---
CHORUS:
With his bloody great kidney wiper
And his balls the size of three
And a yard and a half of foreskin
Hanging down below his knee
---

The lady wrote a letter,
And in it she did say,
"I'd rather be fucked by you, sir,
Than his Lordship any day."

The tinker got the letter,
And when it he did read,
His balls began to fester,
And his prick began to bleed.

He mounted on his donkey,
And he rode up to the strand,
His balls across his shoulder,
And his penis in his hand.

He fucked the cook in the kitchen,
He fucked the maid in the hall,
And then he fucked the butler,
The dirtiest trick of all.

And then he fucked the mistress,
In ten minutes she was dead,
With half a yard of foreskin,
Hanging round about her head.

The tinker now is dead, sir,

```
And they say he's gone to Hell,
And there he fucks the Devil,
And I hope he fucks him well.
--

Hi All,

6085 GERMANY Bayerischer Rundfunk B5 Aktuell heard here in the CNMI at 2033 which a fair signal. News reports and correspondent reports in German. This doesn't regularly make it here, and I remember the old days when they were out of Muehlacker instead of Ismaning. We'll see what the card looks like.

7450 GREECE Radiofonikos Stathmos Makedonias (ERT3) heard at 2139 with telephone calls and Greek music.

6060 ARGENTINA R. Nacional (domestic service of RAE) heard at 1054 with fluttery fades making for poor overall quality with discussion about Argentina's debt, time check and news.

5030 BURKINA FASO Radiodif. N. du Burkina heard with fair but fluttery sigs at 18.41 with African drum mx and announcements in FR. Station ID at 1900 after "balafon" Interval signal.

3315 PAPUA NEW GUINEA R.Manus heard at 10.45 w/song "Paper Roses" and local island music and announcements in Pidgin. Nice level.

4815 BRAZIL R. Difusora heard at 09.11 with PT talk and ID's. Lotsa march music, so may have been some political thing going on. Good quality signal.

11780 BRAZIL R.Nac. Amazonia head with good sigs at 1035 w/Brazilian pop music and IDs.

11925 BRAZIL R.Bandeirantes heard at 0745 with great signal playing US oldies and several IDs' Played almost 45 mins of non-stop music before ID's. Early in the morning their time, so maybe just someone filling a slot. WRTH states that another station leases time from them as well.

13820 CROATIA Glas Hrvatske (V. of Croatia) heard at 0725 with a good signal, with announcers interviewing some sort of female choir. Man, these ladies sounded like they were all lit. Sounded almost truly drunk, and not understanding Croation, dunno what it was all about, but several positive IDs, and lotsa laughs.

Lastly,

9515 BRAZIL R. Novas de Paz heard at 09.24 with PT talk, IDs and EZL music.

That's about it for the weekend from the Marianas!

73s de Al

I also have a Lowe HF-150. A good receiver. Connecting an RF generator directly overloads the '150 at 120mV when the preamp is switched off, which is very good when you consider that the Icom R75 overloads at 100mV, also a very good figure. Note that I am talking about the point where the AGC "runs out of steam" and the I.F. strip is driven into clipping.
The minimum discernable signal on the HF-150 is 0.08uV on all ranges when

the preamp is switched off, improving to .04uV when the preamp is engaged.
I just got through adding an LED backlight to my '150............a nice ruby red color. Doing this mod is not for the faint of heart since it involves unplugging the LCD from its socket (a very fragile component) and very carefully peeling the reflective foil from the back of the LCD itself. After this is done, you need to remove the glue from the rear of the display with something such as alcohol. I used a product called Goo-Gone, but I am not sure how this affects the soft front surface of the LCD. I ended up with some micro scratches on the front of my display and ended up polishing it with 0.7 micron polish.
This is just one of those "rites of passage" that I needed to go through. I wouldn't want to do this again but would be willing to offer advice to those would would. There is a place in Youngsville, Ohio called Lumitex that actually makes the panels. I got ahold of a sample for possible use in the MW receiver design and I liked it so much that I threw it into the Lowe receiver.
What it consists of is a woven fiber optic bundle that emits light. This is very similar to the diffusing panel that is used in the Drake SW-8 receiver. You can actually change the color of the backlight by using a different LED at the end of the fiber optic bundle. I have been thinking about changing the LED color in my SW-8.
I hope this helps.

Pete

No it won't, wait a few years.

> It's a rite of
> passage to join the club.

Now it comes out. Hazing. I thought people got over that in college.

Tnx for the mod idea, I'm filing it.  Now I need to find out which Lowe is best and how they compare to the AOR 7030+ that has been recommended by others on another post as the best.  Right now I have a R-390A, Cubic 3030A and Mackay 3010A and might be moving to smaller quarters in about a year.

 I like the word "soliloquy". One day, I was lamenting over the demise
of my marriage, and I wrote down my thoughts. I emailed my words to
myself, and a few friends. Someone wrote back, asking what my note had
intended. I told them it was simply a soliloquy. In regards to radio,
it is a theater of the mind. Much the same as written words. When
you're dismayed by the thought processes of another individual,
consider, they may have a mind full of garbage. Darren

Left wing loonie just doesn't cut it anymore? Now, if you're anti war, you also have loose morals? That is the most asinine thing you've ever said, worthy of the Ace himself. Using your philosophy, he would claim you have to be a virgin to go kill people half way around the world. People who have never done anything against you.

Looks as though this thing is getting more twisted by the hour.

====================================

In Sunday's edition of the newspaper she works for, the Communist daily Il Manifesto, Sgrena said her captors had warned that she might not leave Iraq alive because the Americans "don't want you to return." In a television interview, she speculated that ransom had been paid for her release and that it was possible the United States targeted her because it disapproves of the practice.

"I don't see why I should exclude having been a target of the United States," she said.

" Passport To World Band Radio" has a good section on amplified
antennas..

I Swear by the SONY AN-LP1 meself; has a pre selector built in..

True, costs more that $19.95.. . . . .

Tnx for the mod idea, I'm filing it.  Now I need to find out which Lowe
is
best and how they compare to the AOR 7030+ that has been recommended by

others on another post as the best.  Right now I have a R-390A, Cubic
3030A
and Mackay 3010A and might be moving to smaller quarters in about a
year.

--

73
Hank WD5JFR

As much as I love the HF-150, I don't think it's in the same league as
the 7030+. The 7030+ offers many more features, greater dynamic range,
more filter choices, etc.

Steve

Keep in mind, also, that the soldiers are not exactly neutral witnesses either. As has already been noted, they're already on edge from dealing with a situation in which car bombs are standard operating procedure for the enemy. The soldiers are going to view any car with suspicion, especially cars on the most dangerous road in Iraq, and they'll be ready to shoot at a moment's notice. In this sort of situation, "facts" are in the eye of the beholder, spin is everything, and nobody can say objectively what happened. I suppose that the inquiry will not come to a definitive conclusion because of this. As I pointed out, if the accounts come down to the speed of the car, then that's not a very good basis on which to build a case that the soldiers were wrong. Ace seems to have ignored the fact that I said this, and I must not have made clear that I viewed the RHC report with suspicion (most of the "report" was a rant on how US soldiers supposedly routinely shoot innocent Iraqis at checkpoints). I think that her case against the soldiers is weak at best, and since nobody can say objectively what happened, it's her word against the troops.

www.skyreport.com   Somebody in a webtv news group posted the article about that on Friday last week.I just happened to notice it just now.It is about some canaDUHians ripping off DirecTV.I pay money (about $44.00 each month) for my DirecTV service.Those canaDUHians thought they could get away with ripping off DirecTV.It doesn't work that way y'all! If you want it,you have to pay for it.

I think you're right Steve- I have owned both. But I sold the 7030 and still
have the Lowe. As you say, it is wonderfully built, easy to use and highly
portable. I have never overloaded mine.
Once backlit, a fabulous bedside RX.

Well, at least you read them. But how often are logs posted here? Not
very often. Mostly it's just name calling and David's liberal internet
articles.

I don't bother with going that far. As a former hacker, I know you can
track virtually ANYBODY who is online. The only way to really be
anonymous is to use an anonymizer service.
>
> You can be anyone you want on the 'Net, and can stir up a shitstorm

On an internet board local to me, there was somebody who came in and
took over the board, posting 30 times a day (out of 40 posts a day) and
insulting everyone, trying to get people banned from the group, etc.
Things have quieted down now, but she's still there, insulting people
and making stupid remarks. I've had a net connection for 10 years, so
I'm used to it, but it's still frustrating.

The Sears store and a McRae's department store are just across Highway
80 about one block South (South is always best) of me at Metrocenter
Mall  www.metromalljackson.com   and I have seen Atomic clocks and
Atomic wristwatches in both of those stores recently.And there are
jewelry stores in that Mall which also sells the items too.

If I decide I want to buy myself an Atomic clock or wristwatch or
both,when the stores open here tomorrow,within one hours time,I can be
right back here in my house with both items.

A visit to AIR Port Blair

-Jose Jacob, VU2JOS

Andaman & Nicobar Islands is a Union Territory of India located about 1200 kms away to the East of the Indian mainland. It is spread in an area of more than 800 kms in the Bay of Bengal. Out of the 572 islands, only 36 are inhabited. It was a top tourist destination till the recent earthquake/tsunami there.

There are several aboriginal tribes in some islands and some of them have no touch with other human civilizations. They have their own languages and cultures. The capital is Port Blair. It was used by the British as a penal settlement for the Indian freedom fighters from 1858. Later criminals from the mainland were also sent there. Lot of people presently there are their descendants. During the IInd World War, it was occupied by the Japanese from March 24, 1942 to October 6, 1945.After the Indian independence on August 15, 1947, people from various parts of India began to settle there and it is mini India there now. Hindi is the common language there. Other languages like Bengali, Telugu, Tamil, Malayalam, Nicobarese and English are the other languages spoken there. From the mainland, one can reach the islands by flight in about two hours while by sea it takes over two days. Entry to the different islands is restricted by the Government of India.

In December 2004, National Institute of Amateur Radio (NIAR), Hyderabad, where I work, conducted a Dxpedition to Port Blair, Andaman & Nicobar Islands. Though part of India, these islands are counted as a separate Radio country by Amateur Radio operators and in some BC DX circles. Due to various reasons, the Govt. of India has been reluctant to give permission for Amateur Radio operators to operate from there. The last major operation from these islands was also by NIAR in 1987 of which I was also an operator. Since then, it became one of the most sought after Radio country in the world. Though I was not a member of the operating team this time, I went there on 15th December 2004 for providing logistic support.

Back in 1987, I had visited All India Radio � Port Blair there. So, this time, it was nice to see the developments there after long 17 years. During my last visit, they were operating only on MW but since then they added SW, added a new higher power MW transmitter and very recently added FM also. The Doordarshan TV which was in the AIR building then is now in a new complex, but in the same campus.

The AIR studioes and offices are at Dilanipur, located at an elevated place in 7.86 acres of land. AIR Port Blair was commissioned on 2nd June 1963 with a 1 kW NEC MB 122 A transmitter installed at the studio premises operating on 1440 kHz. Then on 6th November 1975, 2x10 kW BEL HMB 104 transmitters were added which used 680 kHz. Later it was changed to 684 kHz in the MW frequency reshuffle on November 23, 1977. This transmitter location was at Brookshabad located about 14 kms away from the studios in an area of 39.5 acres. Till 2004 the 1 kW transmitter at the studios was used as a standby for the main transmitter as well as a standby for studio to transmitter link on 1440 kHz itself which is a rare thing for AIR. Once I had heard this standby transmitter on the mainland and got a qsl verification also. In 2004 it was dismantled and shifted to make space for the new 10 kW FM transmitter. The studio to transmitter link is on UHF 1440 MHz. On 11th March 1989 a 10 kW NEC HFB 7840 SW transmitter was started which now operates on 4760 and 7115 kHz. The SW transmitter can operate on 90,60,49,41 & 31 meter bands and tested/used 6000, 6085, 7170, 7180 & 9690 kHz etc also. SW is intended for the Northern and Southern islands in the long island chain and uses a dipole array. In April 2003 one of the two exciters of the SW transmitter became faulty and it could run only at 5 kW. As NEC was no longer producing those spare parts, the R&D Dept. of AIR made a replacement exciter and the transmitter runs at 8.5 kW from 14 January 2004. In May 2003, a 100 kW Thales transmitter has replaced the 2x10 kW transmitters which by the way is still in standby mode and used quite frequently. Also in second half 2004, a 10 kW VHF Nautel 10 NARF036 transmitter operating on 100.9 MHz in Stereo was added which was installed at the studio complex itself. This carries the Vividh Bharati programs. Its new tower stands next to the old tower of the 1 kW transmitter and the tower of the Studio to transmitter link.

The main language used by the station is Hindi. They also have programs in Bangla, Tamil, Malayalam, Telegu and Nicobarese. There are just over a 100 staff members there. On 30th March 1992 a new studio and office building was constructed adjacent to the old studio building on the hill top. These are in separate blocks.

It was nice to meet and inter act with Mr.K.S. Venkateswarlu, the Station Engineer there with who I was in touch for some time now. Unlike in most AIR stations, he takes special interest to send qsl verifications very promptly to DXers and is well known in Dx circles all over the world. I saw the file of reception reports with him which has those from famous Dxers world wide. During my visit to the station, I handed over to him reports on their MW frequency and also on their tests of their FM transmission. While I returned to my home in Hyderabad, his prompt qsl verification was already there. Unfortunately his term is ending there soon as he is being transferred.
QSL cards are issued also from AIR HQ in Delhi. I have

received several QSL verifications from this station. About their station heard on frequencies other than the normal ones occasionally, he told that it is due to human error, especially when new people are at the controls of the transmitter.

On 22nd December 2004, a lecture on Amateur Radio were given at the AIR Conference Hall to the officials of AIR and Doordarshan TV by Mr.S.Suri, VU2MY Chairman & Director of NIAR and Mr.Charles Harpole K4VUD, a visiting ham from USA. Mr.Suri and Mr.Ram Mohan, VU2MYH, dxpedition team member, were later also interviewed by AIR for their Hindi and Telegu Service respectively.

When the Ham Dxpedition was going on in full swing, a severe earth quake and tsunami which badly affected the islands on 26th December 2004 turned it into an emergency communication system. When the earth quake was over the first thing that I did was to take out an Icom IC T90A walkie talkie which had general coverage receiver and tune to AIR Port Blair, which was in tact and which shortly gave out information about the earth quake. I also monitored the local TV station�s audio on VHF Channels 8 and 10. AIR and TV were operating on generators by then.

I noticed that radio was very popular there. Among other things, they also broadcast schedules of ships to the various islands. After the recent earth quake and tsunami there, AIR - Port Blair had cancelled their normal programs and was going live with telephone calls about the missing persons and other information with extended schedules for several days after the earthquake. The FM transmitter which was testing with Vividh Bharati programs from 6.00 am to 10.00 pm also cancelled their normal programs and broadcast those special programs. Another special transmission from a 250 kW transmitter at Delhi were also beamed to the islands for a month carrying Rainbow FM programs.

The current SW schedule of AIR Port Blair in UTC is:

Morning:
4760 2355-0300 4760
7115 0315-0400 (Sat 0415,Sun 0500)

Afternoon:
7115 0700-0930 (Sun 1000)

Evening & Night:
4760 1030-1700/1730

Their language schedule is:

| | |
|---|---|
| Malayalam | 0700-0730 |
| Nicobari | 1030-1100 |
| Telugu | 1100-1130 |
| Tamil | 1130-1200 |
| Bengali | 1200-1230 daily (0930-1000 Sundays) |

Hindi is there at other times.

They also carry the news in Sankrit and several programs in English from Delhi.

Their address for Reception Reports is:

Station Engineer, All India Radio, Dilanipur, Haddo
PO, Port Blair 744102, Andaman & Nicobar, India.

Email: pblairpb@sancharnet.in

To view some of my QSLs please click:

QSL of emergency broadcast on 1440 kHz, 1 kW:

Other information on Andaman Dxpedition etc. is available at:

www.niar.org

Doordarshan TV is also co sited in the AIR campus. In 1982 a 100 watt transmitter made by GCEL was installed in the AIR building. It carries the DD1 program on Channel 10 (Visual 210.2500 MHz , Audio 215.750  MHz). Later a separate building was constructed exclusively for TV. The DD1 transmitter was moved here and another 100 watt BEL MVV-137 transmitter operating on Channel 8 (Visual 196.2396 MHz, Audio 201.7396 MHz) (Sl.No.84, 9/95) was added which telecast DD2 programs. AIR and Doordarshan there uses separate towers. The TV studioes was started only on 2 Feb 1996 and the schedule of local programs is on : Wed & Fri 6 to 7 pm. other days 6.30-7 pm. At other times, they relay programs from Delhi.

I was in the Andamans for about a month and and besides Port Blair, I also went to Little Andamans to provide emergency communications by Ham Radio. At Hutbay in Little Andaman, I saw the damanged 10 watt TV Relay station with its Tower in tact. During my stay in the two different islands there, besides my hamming I spent lot of time for BCDXing also. I mainly used Icom 706 MKII G and Yaesu FT 757 GX II Amateur Radio transceivers which has general coverage receiver. For the lower bands and MW, dipole antennas for the 160, 80 & 40 Meter Amateur Bands were used. Reception conditions were very fine with low noise levels especially so after the earthquake and tsunami there when there was no power supply on the islands for several days. I used batteries recharged by solar panels. MW was full of stations from Thailand and SE Asia and it was not easy to get many AIR stations operating from the mainland. Even during mid day, I could get many stations from Thailand there on MW! Many SE Asian station were also monitored at strong level on the 49 & 41 meters during day time. Of special interest was the Military station from Myanmar on 5770 kHz which was noted at excellent signal strength even at local midday.

Yeah, all I've gotten so far is some aeronautical stuff, someone
landing an Air Canda airplane, saome police action, and a weather
transmission. And some coast guard stuff, and a whole lot of slightly
musical-sounding digital noise.

They've been on since last summer, and change
hourly as 30 seconds, now 2 x 15 seconds promotions
for upcoming network programs.

We don't want them preserved--we want them taken off.

Anyway it is domestic radio, not shortwave.

"Loathed" is the word. Smarmy, self-centred and
referential, they are an attempt to attract (though
they also repel) the youf' market.

I have a few old radios similar to that one.It is true about some of the electronic parts in radios degrading in performance over the years.I wonder why? Moisture in the air gradually getting into the parts and degrading them? I have been collecting old radios since I was a kid,most of them aren't anything special though.Whenever I would see a radio at junk shops,fleamarkets,thrift stores and wherever,if it's a radio I liked and the price was right I would buy it whether it worked or not.I own a lot of old tube type radios and transistor radios.Some of them do not work at all,some of them sort of work and some of them work ok.

    I don't know that I have ever seen anyone stir a group up like Bill did
last week.

    I am wondering "why" this happened, I didn't see anything that was all
that offensive in his remarks.

    I was very surprised by the way people responded to his post.

> Boeing Board Ousts Stonecipher As President and CEO Due to
> Relationship With a Female Executive
>
>
> CHICAGO (AP) -- Boeing Co. on Monday said its board forced out
> president and chief executive officer Harry Stonecipher because of a
> relationship the married, 68-year-old Stonecipher had with a female
> executive at the company.
> ADVERTISEMENT
>
>
> The unexpected ouster makes Stonecipher, who spent just 15 months in
> the top job, the second consecutive CEO to depart the Chicago-based
> airplane maker and defense contractor in disgrace.
>
> His predecessor, Phil Condit, resigned Dec. 1, 2003, as a result of
> the defense contracting scandals that ultimately sent two Boeing
> executives -- ex-Air Force procurement official Darleen Druyun and
> chief financial officer Mike Sears -- to jail.
>
> Chief financial officer James A. Bell, 56, was named president and CEO
> on an interim basis.
>
> Boeing shares fell 88 cents, or 1.6 percent, to $57.50 in early
> trading on the New York Stock Exchange.
>
> Boeing said an internal investigation prompted by information sent
> anonymously to chairman Lew Platt and the company's legal and ethics

> leaders 10 days ago revealed a "consensual" relationship between Stonecipher and the female executive that the board determined was in violation of the company's code of conduct.
>
> "The board concluded that the facts reflected poorly on Harry's judgment and would impair his ability to lead the company," said Platt, who is to assume an expanded role at the company.
>
> He said the requested resignation "was in no way related to the company's operational performance or financial condition, both of which remain strong."
>
> Spokesman John Dern said the female executive, who was not identified, did not report to Stonecipher and remains with the company. He declined to provide further details.
>
> "This raises a lot more questions than it answers," said analyst Richard Aboulafia of the Fairfax, Va.-based Teal Group.
>
> Stonecipher also was dismissed from Boeing's board, which he had been a member of since joining the company from McDonnell Douglas when the two companies merged in 1997.
>
> The tough-talking son of a Tennessee coal miner, Stonecipher had been credited with helping Boeing to clean up its ethical behavior and with improving its sullied reputation in Washington. The company's stock surged 52 percent during his tenure.
>
> He also is one of its largest stockholders as a result of the McDonnell Douglas deal.
>
> Stonecipher failed, however, to win back the tainted $23 billion air-refueling tanker contract that the Pentagon pulled from Boeing because of conflict-of-interest violations involving Druyun and Sears.
>
> He turns 70 in May 2006 and had been expected to retire early next year.
>
> Stonecipher and his wife, Joan, are well-known contributors to the arts in Seattle and to some colleges, including Tennessee Technical University, his alma mater.

Vacuum tubes generate heat -- components abhor heat and die
Capacitors have wet gooey stuff in em and dry out.
My solid state TV (less CRT) has been on every day for 15+ years
no heat no die

Then there may be fungus amongst us (;-)
Rodents love paper parts.
And my damn dawg will eat anything including chewy cables.

That's what another friend suggested. It would probably be fine. I am going to just replace the device since part of it is under the LCD. Also, since my radio originally had a blown 1st mixer, it is quite possible that this chip was subjected to ESD.

Why yes Capt. I would love to explain this to you. This is what we on Earth call a radio. It is designed to receive radio signals. Radio signals bring news and entertainment to all corners of the planet and are transmitted by radio stations. Hope this helps. Take care.

B.H.

It turned out to be Q4 (MC14569) that had a thermal problem. Lowe UK was
nice enough to steer me in the right direction. After the unit was on for
about 15 minutes the problem would surface. I cooled the suspected device
and the problem went away. After 2 more minutes, the problem returned; once
again, I cooled Q4 and normal operation was resumed.
Actually, it is pretty interesting how the BFO signal is derived. The
reference oscillator is divided down by different intervals to derived the
USB/LSB injection frequencies. A ceramic ladder filter is used to filter the
rich harmonics from the 4569 and so that only the ones in the 455kHz range
are selected.
It is interesting how the 44.545MHz signal is derived. A fundamental
oscillator in the 14MHz range is used with a quad diode array to generate
the harmonics. An LC tank circuit selects the 44.545MHz harmonic. Pretty
cool design.
On a final note.....................a nice fellow on the other side of the
pond was nice enough to scan the service manual for this receiver and send
it to me in 4 PDF files. I am going to contact Lowe UK and see if it is ok
to post the manual up on mods.dk
Maybe, I will zip the file down to make it easier to e-mail to folks who
want it now.

My wife and son are both E.E.'s and their explanation is that IC's
begin to degrade slowly as a result of impurituies in the wafer.
Simple components like capacitors dry out and resistors begin to open
up.  Wish I knew more, but I can hear what they tell me in the radios
I've owned.  I owned one of the comparison radios, the Panasonic
RF5000b.  Big beast of a 24 pound radio with four antennas.  It was
pretty insensitive by any measure.  Sure it would catch the big
nighttime SW's but that was about it.  Other radios, such as a Radio
Shack DX150b were still pretty sensitive (and still raspy sounding)
after 25 years, so the rate of degradation isn't a constant.

For $15.00 you can't go too wrong if it works! Enjoy it for what it is...a moderately priced reasonably well made multiband radio that will probably catch a fair number of broadcast stations and be fun to tune around the public service bands too.

P.S. transmissions tend to be pretty quick, so catching them will be kind of hit and miss. Does it cover 129mz? If so, tune up and down and you will probably hear traffic from the local airport.

Basically, there was a guy in #monitor who either wouldn't or couldn't stop subjecting other users in the channel to various types of ridicule and abuse, so he was booted off the channel. He and some of his friends decided to go start their own channel where they could be free to hurl whatever insults they wanted at people. As far as I know, they're still there. The rest of us are in #monitor and the #monitor channel on zIRC is linked to the original #monitor on IRCnet as well as to #monitor on DalNET and StarChat.

Where you are naturally welcome to come join us anytime. :-)

Yup. Today it's called ALE (Automatic Link Establishment) and it's all
over HF.

Do a net search on "eletro-migration".
Over time the electrons carry some of the ions that make
junctions either P or N. Electro-migration increases with heat,
I think it doubles for every 3C degree increase. This is why
overclocking CPUs cn lead to unexpected failures.

My guess would be the other way around - lower freqs at local night
(where the stations in the net are) since the MUF is generally lower
during the hours of local darkness. During local daylight, when the
sun gets to cooking the layers in the atmosphere, the D-Layer starts
absorbing things while the higher frequencies propagate stuff.

>And how regular are these USB nets? I only run into them once a year or
>so during operations.

Lately, it's seemed like one or two of these a month has been reported. By that, I mean one or two times a month a group of surface ships is found to be running one or more nets like this.

In January we had a carrier battle group running three nets at the same time, on different freqs - a surface warfare control net, an air defense net, and a LINK-11 coordination net...all of which resulted from somone in #monitor reporting that they'd heard the LINK-11 data signal. I went looking for the voice coordination net to go with it, and found it in an hour or so, then another guy read about it on the WUN list and found the air defense net, and so on.

>Regardless, it is VERY interesting listening.

If you're into UTE monitoring (as I am), heck, yes. Nothing beats realtime military tactical comms!

JS>  That's good information.  And it's not too surprising that IC's
are temperature sensitive since we use heat sinks and fans to dissipate
heat.  Could also be why some of the Radio Shack Pro scanners tended to
die early deaths when a faster crystal was added.

Setting tones might be the CTCSS (Continuous Tone Controlled Squelch System)
a sub audible tone in the range of 67 to 254 Hz.

Some FM repeaters require the CTCSS tone in order to access the repeater.

Sometimes called PL (Private Line - a Motorola TradeMark).

Interesting price.   Remember ??  a couple of months back I posted
an inquiry saying I found one of these in working conditon on a back
shelf in the stock room at work...did anyone have any doc's to assist my
restoration ??

The radio is currently in service in our undergrad analog circuits
lab so the students can listen to something more interesting than top
40's when they're in there after hours trying to finish up.

It still needs an unkludged bandswitch knob, and I'd love to have
a copy of the alinement data.

starman   Mar 6, 10:12 pm

I can't recall RAE ever being heard really well in the northeast US.
They have a history of poor reception in North America even though they

should be heard well most of the time, given their power and location
relative to NA. It's probably the result of a mediocre transmitting
antenna and/or improper transmitter operation with the antenna.

...I've been able to pull in the English Broadcast every so often. In
January I was able to copy nearly an entire hour 02-03...SINPO 45444 on
11710 (which is the dicey frequency IMO). In July 2004, while visiting
Estonia, I brought along my RS DX-360 and heard Italian or Portuguese
on 15345... BOOMING! So, I think you're right, at least on the 11710
freq.

Dear "Starman,"

The person who initiated this post cannot have an outdoor antenna of any type. He lives in an apartment which, of course, has restrictions (read the first letter in this post). That is why I did not even mention an outdoor antenna.

In his particular case, he wanted to know if a Grundig Satellit 800 would be "better" than a Sony ICF-SW7600GR. I recommended that he FIRST try an AOR WL500 Window Loop Antenna, the best antenna of its type I have found (it delivers a better signal and affords a better signal-to-noise ratio than, for example, the Sony AN-LP1 antenna, though I like that antenna, especially for travel). I said to him that if the AOR antenna improves his reception on the Sony, the Grundig will definitely offer an improvement. If, however, he notices little or no difference in reception with the AOR antenna over the "wire clipped to antenna" he is currently using, then forget about the Grundig until he moves to a different house.

But to answer your particular question, a Wellbrook ALA 330S Active Loop Antenna will probably outperform ANY "real-world" short wave antenna any of us are able to afford due to its great improvement in the S/N ratio of the received signal. Certainly that is the case in the summer when atmospheric noise is at its highest and, of course, in many houses and neighborhoods with nearby electrical wires, street lamps, buried cable-TV wires, computers, fluorescent lights, outdoor "low-voltage" (read: transformers made in China) lighting, etc., etc., etc.

The Wellbrook is far less sensitive to the "electrical" component of the particular frequency to which you are tuned. That makes all the difference.

A well-built outdoor antenna - a random wire, a sloper, a dipole - will receive more "signal" but will ALSO receive more "noise," thus degrading the listenability of the received signal. If you are in an electrically-quiet area, where there is little or no noise problem of the types described above, the outdoor antenna is definitely the way to go, at least at first.

I personally cannot have an outdoor antenna either due to homeowners' association restrictions. The Wellbrook antenna has been like a miracle for me! If I lived in an "ideal" world, however, I would have BOTH - an outdoor long wire AND the Wellbrook. I can tell you, however, that I would probably be using the Wellbrook more, especially in summer!

For most people in most situations, I feel that the Wellbrook ALA 330S
is positively the best antenna yet designed, certainly the finest
antenna I personally have experienced in well over forty years of short
wave listening.

Best,

Joe

Can you explain this problem a little more? I did notice that sometimes
after I get a lock on a signal, and move out of range a little and you get
that howl, I have to move the dial quite a bit around to get another lock.
But, it then locks well below the frequency it locked at before.

Is this what you mean?

Lucky

That's what he's saying.  A .04uV signal is weaker than a 0.8uV,
and for the former to be noticeable, the preamp needs to be in place.

Michael

I can't wait to hear what the Cubans have to say about this
"development" tonight on Radio Havana. I recommend that everybody else
here who is in North America tune in to hear birds of a feather
defending each other. 6000 and 9820 khz after 0100.
>

I've had two Sony CRF-5100s in my time. The first I bought was from a school rummage sale about 15 years ago for $8. Another was from a hamfest a few years ago for $85. Neither was terribly impressive and I sold them for roughly what I had in them.

You can't restore ICs, of course, but you can replace auxilary
transistors, capacitors, resistors, etc. I know that some of the older
transistorized clock radios (the ones made in Japan prior to the
microchip age) tended to have the radio die gradually over time. This
happened prior to the motor which flipped the numbers dying. I know that
happened to an old 1971 Juliette which was my first radio. The radio
gradually got weaker and weaker and finally went silent, then the
numbers stopped turning. Those clock radios were pretty cheaply made and
were not worth restoring, but a tabletop SW radio like a 7700 would
definitely be worth restoring if it was otherwise pretty good.

No, what I mean is that the carrier insertion point, instead of being -25dB down on the I.F. passband slope shifts to -35dB down on the slope. If you play with a receiver that has passband tuning, the description becomes apparent. I will describe the sound when the unit malfunctions....................the noise from the receiver becomes very high pitched and voices become inaudible. The reason for this is that as the BFO signal is moved out of the I.F. passband, the resultant audio is in the supersonic region. Because of the low-pass filtering that is prevalent in communications receiver designs, these high frequencies are bypassed to ground, resulting in no apparent received audio.
Evidently, this failure mode is pretty rare, so it is pretty unlikely that you will experience this condition with your receiver.
I hope this helps.

Pete

hjsjms@cs.com wrote:

> Collectors have a whole different set of reasons for buying a radio than users. Compare the price for that radio with the $600.00 for an FRG-7, $800.00 for a Sony 6800, $3,000 for a SonyCRF320 or $800.00 for a Zenith TO. Prices no user would contemplate, but several collectors would not blink twice at.
>
> The Sony you mentioned was one of many luggable radios in it's time. It probably priced out lower than but was meant to compete as a reasonably priced alternative to the Panasonic Rf-5000a, Zenith TO, Nordmende & Grundig offerings. All were reasonable performing radios in their time with notably pleasant audio - much mellower than anything found today. In all cases time will have taken a toll on their electronics and there's a good chance controls will be noisy, dial accuracy will be frustrating, plastic started to fade, etc. For my purposes the Sony would be fun to use for a while, but that's about it. That there have been 32 bids to date tells me there's more than one collector that have a different view.

Don't forget the GE World Monitor, another competitor in the TO type radio derby of the 60s. I have an early version of the World Monitor, a P990C that my grandfather bought new in 1964. He bought it for the FM band, this at a time when most small transistor radios were MW only. He paid $100 for it, which was a lot of money in 1964. It still works well, and has the original AC adaptor (he used it in his auto repair shop). I could probably get $800 for it on ebay, not that I would risk the wrath of my grandfather by doing so.

Note that the seller has amended his auction to argue that the Sony is worth $400. He originally put it up for $19.95.

Thanks Pete

I love the 150 and have it for like 1 month now. I'm drawn to using it. It's extremely sensitive and holds weak signals very well. The sync actually works.

You seem pretty knowledgable about the 150. What purpose does the double side band serve and under what circumstances would you be applying it?

Thanks
Lucky

I believe that this goes to a wider I.F. bandwidth, giving better fidelity.
I haven't played with that function yet, but once I get the receiver
repaired and aligned, I will give it a try.

Pete

Usenet = public forums.  Anybody who posts statements on it
they would be ashamed to have their employer/pastor/powerful
people see - or brought to there attention - doesn't have a
legal leg to stand on and is a goddammed fool.

Is he aware of your opinion of him?

FW

>>Be very careful. Dial cords were not intended to be understood by human beings.
If you DO go ahead, draw a picture of the pulleys....

There is a rumour out there that last person to successfully restring a radio
died in 1979.<<

This is one of the easy ones, but I believe you nonetheless.

Soon after I got the radio, I went over to the Library of Congress and copied the Sams Photofact for it. It was easy to do things like that back then; security is much tighter now. The Photofact has the cord stringing diagram. I have some spare cord lying around too.

Thanks for writing.

reason] curious as to why David made the claim he did. It was an interesting day at work today - yup, I'm a Boeing employee and the reactions were interesting. Some folks were quick to point out the impropriety of a CEO having a relationship with an underling (even if not directly reporting to Harry - we do, oops, did all work for him). While others figured that at his age the fact that he has a wife and an outside relationship is a positive testament to his virility. The true irony is that Harry was brought back from retirement to save Boeing from ruin - partially due to ethical issues at the Board Room level.

Have a good evening Honus,
Howard

Megan tend to be a bit pricey..

It is actually made in China, and is sold under several brand names
including Seiko. Shaper Image sells it (they are on ebay for about
$12,

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=79643&item=4362185091
is the same electronics package in a different plasti case.  Mine say
Chass for a brand. They are all the same inside.
Beware: They take funny batteries,  a pair of CR2430's IIRC, and the
only place I haven't actually tried to get them to lock on to the time
is the UK. It worked in Japan (although it took a long time to
acquire), and in Scandanavia (locked onto the German signal).

Don't dwell on it too much. Lots of us stop to look at the accidents. It's
just morbid curiosity. ;)

She wasn't directly beneath him...so to speak? I hadn't heard that. Still, I
can see why what he did is frowned on.

> While others figured that at his age the fact that he has a wife and

Maybe, but it's not much of a testament to a few other things about him.

Yep...that's been noted all over the radio.

I've heard the same reviews. Now I actually know what they mean. <g> The
long antenna really helps, though; I'm loathe to give it up.

I'm going to have to look into that. I'll dig through google as well, and
see what the other denizens of r.r.s. have had to say about it. Thanks.

When my friend's dad died, he auctioned off almost all his stuff,
keeping the nicer R390A of two his dad had, and a nearly new looking
Hammarlund HQ180. The rest went, along with a seemingly endless supply
of parts he built up over the years. Half the attic was stocked with NOS
receiving tubes, and a large number of high power linear amp tubes and
other transmitter tubes. His dad's so called "friends" attempted to
steal all his stuff after he died, and were really upset when my friend
didn't give them the stuff for a tenth it's real worth.

I think the CRF-5100 went for 90 or 100 bucks, but it wasn't one of the
ones I wanted, so I really didn't pay attention to the bids on it. I
wanted the Drake R7, but was outbid almost instantly. It ended up nearly
what a new one cost..

Damn, I was watching that one. If I would have had the cash available I would have grabbed it up. It looks great, my 515 has some scratches and needs alignment, bad..

Yea, if it's an analog portable type, they were pretty
marginal...Selectivity was the main problem. In a busy
city, you couldn't listen to the police, unless you wanted
to hear 2-3 channels at once. Those were usually 460 mhz,
with 25 kc channel separation. I couldn't hardly use one
here in Houston. Now, anything that is a "scanner" will
usually be ok. Either xtal, or synth, pll, etc...They all
had the selectivity needed to listen to tight channel spacing.
Also, the sensitivity was so-so...Usually FM images too...
I once had the top of the line patrolman radio...The big
puppy with two TV style whips, AM/FM/SW/AIR/VHF/UHF, etc...Was
a decent radio I suppose for a portable, but not anything a
serious police listener would want to use, unless they were in
a dinky small town, with few channels.  I used to cuss the
things here in busy Houston. Really pitiful....My first actual
scanner was like night and day...Most of the scanners are
called "pro-whatever" instead of patrolman...Some of the first
xtal versions might have been called "patrolman" though, light
years ago...MK

I suspected as much, but the coincidence of the harmonic coming in so close to one of their other broadcast freq's made me wonder a bit. That and the fact that I've never picked up harmonics from SW in the MW end of my dial. I usually come across them 910 KHz away from the true frequency. Thanks for all of your help explaining this to me. I snipped it in this reply, but I've saved in my mailbox and I'll be sure to study it in more depth.

Yes, he will be missed.

Also, Jim's mom Lee is not doing very well either.  Jim was leaving
after seeing his mother when the heart attack occurred.

Havana says that she's saying that the US doesn't agree with freeing
hostages through negotiation, and since she was freed through
negotiation (apparently she's no longer mentioning payment of ransom)
the US wanted to kill her. Makes sense to me, Beavis, huh huh, huh huh.
Furthermore, since the Italians had notified the Americans of their
operation, and since the Americans had allowed an Italian plane to land
at Baghdad to pick her up that the goverments were working "in harmony"
and the Americans knew exactly where she would be and what car she would
be in. According to her, there was no checkpoint, there was no warning
of any kind before the soldiers opened fire. Sure, and she's got a canal
in Venice for sale cheap. I sometimes wonder what planet dumped this
"people's vanguard" on us.

I have both items a Sony ICF-SW100S mini portable shortwave receiver and
the AN-LP1 amplified screen antenna for sale. They are very lightly used
and present as "like new in box" with all original packaging etc. The
box looks untouched and the manual and printed materials were never even
opened. This radio is of course remarkable in that it has synchronous
upper and lower sideband for superior fade free reception and is barely
the size of a cigarette pack, yet offers similar performance to their
much larger radios without the bulk. Complete with a amplified antenna
system/preselector. All original accessories are of course included. AC
adapter, ear buds soft case etc. For the serious hobbiest that likes
portability AND performance this is a great setup. _*Will ship anywhere
in the Continental U.S. for $300 including shipping*_. Contact me either
at _*dcisive@hotmail.com *_or _*dcisive@qwest.net*_. I'm in the State of
Utah, USA.

He makes the same claims here. I'd be happy if he'd just learn to quote from
the posts he's responding to.

```

For a well designed integrated circuit, the most likely thing to fail is the package, which in turn leads to failure in the bonding. Consumer grade electronics use porous plastic packages, while the military forks out for ceramic.

It is possible to get ion contaminator from how the wafers were handled (such as a moron touching the edge), but the associated threshold shifts show up very soon. I'm not sure if you can find this on the net, but all the IC companies do some sort of die seal to reduce this problem.

I'd blame the capacitors, especially tantalum. Resistors should be stable.

Regarding electromigration, this is also well understood and compensated for in the design process.

I can tell you that most chips coming to a failure analysis lab are damaged by electrical overstress. Often a power surge will shoot right through the power supply and zap some chip. [Some radios are "always on" if hooked up to the AC mains, so a radio that is off can get zapped.] Second comes latch-up related problems, not exactly the fault of the chip, i.e. all chips using reverse biased diode isolation will latch under some external conditions.

```

The Wellbrook is great, but not a big seller, especially the ALA 100, which is just the amp. Based on serial numbers, they sold 3 in 9 months in the US market. Other than size, the wellbrook beats out any of those loops like the Kiwa or Quantum. The Kiwa might be of some advantage if you don't have narrow band filters in you radio, but anyone forking out the $400 for a Kiwa probably has a decent rig.

I suspect the US market doesn't like the hoops you need to go through to buy the Wellbrook. No secure internet website for instance. No toll free numbers.

Operators may not evenchange  "plug-and-play" equipment unless they
are throwing a switch from main to standby.  Read the rules, Sir.

No, try reading ARRL and ham history a bit, you'll find the scenario
and stories.  My imagination isn't that good.  Maybe yours is.
>
>>  But I
>> suspect that it will always be a part of the license requirement.

We did, but our club, our rules.  You want the license, you pass all
the tests.  Don't like it?  CB is still there, but for how long, no
one knows.

Drive through, please.

Hey Jack,

I agree with you, but an operator may not even swap "plug-and-play" modules, unless s/he is just flipping a switch.  They may disconnect and remove the radio and replace it, but they may not open it or perform any mods or adjustments.  That is still the exclusive domain of the repairer, according to FCC rules.  You might check some of the US Mariner organization web sites for more info about requirements for Radio Officers as well.  They still need the second class radiotelegraph license to be on the ships which is still 20 WPM.

As far as the code required to operate the stations, I agree with you about aircraft, however, see the above for maritime stations.  A 2nd class radiotelegraph is still needed for the operator, despite the station itself being licensed, at least for US flagged vessels.  There is still a very large proliferation of CW coast stations worldwide as well, so something is still going on, right?

As far as my anecdotal story goes, that was what the ARRLs story was way back when, when I got my license.  I believe that to be more palatable than your anectode at any rate.  True or not, that's what was in the books and that's what we all believed.  The War Dept. (now the Dept. of the Army) didn't cause cessation of ham radio until everything hit the fan in WWII.  Hams were even regarded as national resources and helped win the war.

Unfortunately, We the People gave Big Brother the rights to our airwaves many, many years ago. Now they are regulated by the government and just you try to do something saying they belong to the people. See what happens, LOL. The only time they belong to the people is when the government is prosecuting someone in the name of the people. It's easier to get convictions that way. LOL

I know a lot of your own personal feelings are put into your posts, but unfortunately, what you believe, and what laws and rules actually exist, conflict in so many areas, Jack. Code is still required for a reason, whatever that may be, and while I agree it may not be necessary in the vast majority of cases, there will always be that one exception to the rule emergency-wise, that I believe completely justifies at least keeping the 5 WPM.

73s
ASA Lives!

Al

I forgot to mention that the S-meter scale now has a white background with black letters and a red tipped needle. I copied the original on the scanner and made the changes with Adobe Photo Shop before printing it to glossy paper. I may get around to making a new case cover from heavier sheet metal, just for fun.

I have explained at least twice in this news group before that sometimes I am at my FlowerinThWater nick name checking out some other news groups and some of my emails over there.So the folks in this news group have known that for weeks.I don't make any false claims about my computers and my Road Runner broad band internet access or anything else.If y'all don't believe that,I will bet y'all everything I own.Come and see for yourself.

It is very stale and old-fashioned sounding.  They've been using Ratt
```

```
for the News Sounder for what, five years now?  There news sucks; all
Michale Jackson and Robert Blake.  Their Drive Time is wall to wall
commercials, except for the ranting about the Mexicans.  It's awful.

I think the best technical air sound is on 1260.

I agree. For $485 I have DSP and a bunch of filters I can play with. Well
worth the money.

Lucky

So what would shipping be on aprox on 12 of those ferrite cores?

Xref: g2news1.google.com rec.radio.shortwave:56692

My dad called tonight and told me they found another box
in the endless cavern that is their basement. It is my first
SW radio. A old Zenith AM/SW. I can't wait to pick it up
Thursday and start the rebuilding project. I suspect that all
the caps have eiother dried out and open, or are leaky.
Dad said that I packed it real good wraped in newspapers with
a photcopy of the Rider (Ryder) service data. I had forgoten
that I had scrounged up several spare tubes so this baby should
last a while. The original plastic (bakelight?) case was cracked
so I made a case for it in 7th grade shop class. Every since
they found my GR64 several years ago I had wondered what had
happened to the old gall. If I remember correctly the radio
covered from about 5 through or just beyond 15MHz.
Dad says that it has some of my early attempts at antenna design.
These I can't wait to see. I do remember planning (dreaming)
to put a wire from the hill behind my grandmother's house to the
hill top on the other side of the valley. Only about 1500'. Dad
tried to explain wire sag but heck, what does a 7th grade know
about that!
I got that radio while cleaning out a widows attic. Got paid $5 whole
dollars. That was the early summer of 1963. I knew enough not to plug
it in until my dad got home. He called a friend who brought over a
magic capacitor checker and they checked and replaced all the caps.
The friend was a TV/Repair man and even aligned it for me. We laid
about 50' of wire out and sure enough it worked. It was late so

dad said we would put up a "real" antenna the next morning. I was flabergasted. My dad NEVER took off work unless someone was sick or dead. True to his word we went to the local radio store, Radio Electronics is still in business but a ghost of their past, and bought 125' of antenna wire with two ceramic insulators and a 8' ground rod. Must have cost all of $5. His treat. We spent the rest of that morning putting up a 98' "long wire" that I used until I married and left my parents home. His friend insisted that I use an "isolation" transfomer that he gave me. I still use the ceramic insultors, but the antenna wire got tangled in fallen trees in the ice storm of 1991 and I couldn't salvage much of it, or at least not in one piece. But at least the radio will have a nice home, out of a cramped box.

I will post a review of this radio after I "restore" her.

I am much more excited about this radio then the "new" PCR1000 that I just got in a complicated trade. I am blessed with a wife who shares my love of radios and loves "old things". Might be why she keeps me. The old things part.

Terry

25 khz or 25 Mhz? I doubt there's anything except a few data signals around 25 khz, I know WWVB operates at 60 khz. 25 Mhz, on the other hand, is on the upper end of the HF spectrum, around the CB band. I believe some CB freebanders may hang out in that area.

"Anomalies"? What exactly is an "anomaly"? Is it like the Mystery Spot?

As for Michael's post, it seems to me that a lot of SW kooks are using advanced kookology in the service of selling gold (or occasionally diamonds). They use kook theories to "prove" that civilization is about to collapse, and once they've whipped their listeners into a panic, they offer to sell them gold coins as a means of surviving said collapse. If the shit really DOES hit the fan someday, I'd like to see the kooks eat their gold coins, while I grow vegetables and roots (I need to plant some fruit trees too, mine all died) on a one acre plot of land. While the kooks and their followers desperately try to trade their gold for food, I will trade food for gold (if I feel so inclined) and amass a nice collection of Kook Gold in my attic and still have seeds to plant next year, while the kooks will eventually run out of gold to trade for food and will starve. Since I will have a nice collection of gold, I will offer to let them eat my gold, and have fun watching them trying to chew their coins. Life is good. :)

Has anyone compared these two receivers? Could I expect similar performance, or possibly somewhat better in the Degen? The DX-440 seems to suffer somewhat from spurious signals on some bands.
>
> Thanks in advance,
> Tom
>

Note: I use ATS-803a and DX-440 here interchangeably since they are practically the same radio.

I have the ATS-803a and the DE1103 so I can speak to this somewhat. For shortwave listening, they are comparable. If I can receive something on one, I can receive it on the other. Sound quality is similar, the bass is slightly deeper on the ATS-803a. The speaker on the DE-1103 is quite powerful for its size. I should note that my antenna is a single 20 foot horizontal wire in a detached garage away from my house, fed through a transformer on an FT-43 torroid. Thus, I have no idea if either would overload or not with a "real" antenna.

On MW, they both are comparable as well, but the small size of the DE-1103 allows for easier rotation (on my desk, anyways) for optimal reception. The ATS-803a/DX-440 has the benefit of turning off the MW ferrite antenna when you plug in an antenna wire--on my desk, next to my noisy computer, this allows me to silence the high RF interference inside the house, and receive the signal from my (coax fed) wire antenna instead.

The ATS-803a has a quirk where the tuning knob behaves strangely--at least mine does--jumping 100 khz at a time sometimes, so the DE-1103 is easier for me to use for manual bandscanning. I found some stations in the day (22,19,16 m etc) that I missed before with autoscan. However, it does get stuck in band segments (by design) and you have to hit the band + button to jump to the next. To scan between "bands", you must enter a frequency in the segment, and then use the knob to scan.

I don't know about the BFO's, they both seem to fine-tune as easily and zero beat as easily, but except for a few HAMS, most SSB signals here are so weak that I can't tell if either is any good. AFRTS, for example, is tunable but too weak to hear.

As to FM, I have no idea, except that they both "work." They both receive weak FM stations equally as far as I can tell.

Overall, the main advantage of the DE-1103 over the ATS-803a is its size and portability. Also, the faux-analog display can help people like me who don't have the bands memorized. The main advantage of the ATS-803a is that a full service manual is available with full schematics, and with the exception of a few components, if it breaks, you can probably fix it, or someone else can. Also, the ATS-803a has massive batteries that last for ages.

One final note, the Degen 1103 behaved very strangely when I received it--it would only receive on even frequencies (i.e. 5000 not 5001), and would lock-up a lot. I was almost ready to send it back when I tried different batteries, in this case Energizer 2100 mAh NiCad's. Now, everything works fine. I compared the batteries that came with it with others, even with the AA's that came with my Degen 1102, and the 1103's batteries they are about 0.6 mm shorter each. I suspect a weak battery compartment spring and the shorter length was causing poor contact.

Oh, the Degen batteries? They are happily in my digital camera and working fine.

Hope this helps.

Hi,

I wish I had made the recording.  But just imagine you are near the airport and you hear the helicopter hovering above you; same pitch.  And the signal covered the entire freq range I described.

BTW, I am in Kathmandu, Nepal.

I don't eat pork because it is very fatty meat. Ever cooked pork chops
in a convection oven? It leaves behind gobs of disgusting fat. It only
took me about a dozen times of cleaning that out before I swore off
pork. Even though I don't have the convection oven anymore, I still
won't eat pork. I don't eat shellfish because they secrete a toxin that
can be deadly. The CIA used to give spies shellfish toxin to take to
kill themselves if they were ever captured. If you don't cook the
shellfish right, you too will become paralyzed and die rather quickly.

In my Latin American History class (college diversity requirement) my
Mexican professor told us how his mother used to ask pork vendors to cut
off a thin slice from their pork chops so she could see how many trich
cysts there were, if there were too many she wouldn't buy it. And I once
had an old man tell me how his father ate some shellfish that didn't
taste right on a train. Later, his bunkmate noticed that his lips were
green. He tried to get up and couldn't move. Fortunately the train was
passing through a small town with a small hospital, and the man
survived, but five minutes later and he would have been dead.

Sorta, it was called just plain Hughes at that time though in full it
was General Motors Hughes Electronics, we seldom called ourselve GM.
GM bought Hughes Aircraft then it was split up for sale to Raytheon
(most of the military business) and one of the remaining divisions,
HSC - Hughes Space and Communications, was sold to Boeing.  DirecTV
was a subsidiary of HSC in it's early days, a creation of the folks in
Hughes who operated the satellite fleet mostly known as 'Galaxy.'   I
know the history as I've been there 25 years, since it was Hughes
Aircraft Company - under the umbrella of the Hughes Medical
Foundation.  In fact David, I am a Project Manager on the XM Satellite
program.

Do you REALLY want an answer to that question? The answer is of course
that he does not. Anybody who believes Kook SW has some serious reality
issues.

Shhh, don't tell him that! He'll start wondering why the Bible doesn't
mention cars and computers!

The Romans ate mice. Stuffed mice were considered a delicacy for much of
Rome's grandeur. That's probably where this prohibition comes from. The
Bible also forbids eating grapes because the Romans loved grapes.

I was wondering what all those funny characters were. :) Guess usenet
didn't like his enhanced bible text.

Does it bother you that the signals your satellites send out kill
people? Or am I interpreting David's rants wrong? ;)

DX ......... I've given him a quick history, just posted a few moments
ago.  As mentioned, I'm a 25 year veteran of Hughes Aircraft/General
Motors Hughes Electronics/Boeing Satellite Systems.  And guess what -
we've just changed our name again!  We are now SDC - Satellite Design
Center of Space and Information Systems, Integrated Defense Systems,
Boeing.  I'm sure you understand, just a division buried in a larger
company - not sure if some other(s) will catch on though.

Never was truly "fluent" however I still recognize words here & there
- will park the radio there & listen; if I hear anything and can
confirm the language I'll post it.

The Kaito KA1103 (also sold as the Degen DE1103) is probably the best
performing radio in the world for less than $100.

I have the Degen DE1103 version and I absolutely love it!

http://groups.yahoo.com/group/kaito-de1103/
http://www.radiointel.com/review-degende1103.htm
http://www.eham.net/reviews/detail/4288

You also asked about the 1102. I also have a Degen DE1102. When the 1102 first hit the market, it made a lot of people take notice about Degen radios. By the time they released the 1103, then Degen became a major player. I like my 1102. It's small yet powerful, and it has a pretty blue light that glows from every single button. But I can only use one radio at once, and my 1103 is my every day radio. That means that my 1102 only gets used on the day that my 1103 is hooked to the battery charger.

Honestly, you can't go wrong with either radio.

Our satellite signals kill people?  Damn, we'll have to advertise that
as a new feature and charge our customers more 8-}

All righty then...

I took a short walk to the beach and took a gander at it. Sky is blue with white puffy clouds. The ocean waves breaking just before they reach the beach. Seagulls flying around and the temperature is in the 70's. Then I looked up and down the coast, everything looks normal. The fog rolled in late afternoon so it was a gray sunset.

Anything else I can do for you just let me know OK.

Go to rec.antiques.radio+phono with the model number and the guys there
should be able to tell you how old it is. I always loved old tube
radios. My first SW receiver was a Hallicrafters S-40, made in 1946-48.
I loved the eerie glow of the tubes and the green glow of the plastic

dial and the smell of cooking dust while listening to "Radio Moscow World Service" (an attempt to compete with the BBC World Service) and the various stations I could pick up, mostly in the 31m band. That radio died a slow death until I sold it to a retired TV tech for $20, and he promised to restore it. I now have a Yaesu FRG-8800 as my main rig, but I'll never forget that Hallicrafters. I bet it would go for a pretty penny on ebay-it was in pretty good shape.

I recommend the Sony ICF-7600GR. It gives you USB, LSB, AM and FM. It
even has synchronous detection! A very good value for the price.

Steve

At the risk of sounding dumb, can someone clue me into the origin of
this antenna and where it's commonly used:

I have, at various times, been lulled to sleep by...

- numbers stations
- VOLMET and HF Aero comms
- HF Marine
- R. Australia and R. New Zealand
- L.Am. tropical banders
- CFRB (well, CFRX actually)
- Radio Mil, when they used to be heard fairly easily on 6010

Is Radio Mil still there on 6010?  I haven't listened in a couple years.

There's a nice one on there already. Didn't really check close enough to
see if it's the same one.

What a fun post to read. I love old radios, too. I have an old Philco model
84 that was built sometime in the 1930's... the caps, tubes and the power
cord were replaced, as well as the speaker cloth... so it looks like old,
but works like new. No SW band though, just AM, and I'm less than 3 miles
away from a flamethrower AM station, so I can't pick up much more than that
one station... but it looks cool and is a great conversation piece.

It's funny how old radios, more than any other piece of electronic
equipment, seem to conjure up folks' memories of their
dad's/grandad's/great-grandad's radio from way back in the early part of the
last century. Whenever people see mine, they usually say something like,
"Hey, I remember my granddad had one of those old tube radios, too", then

they will try and describe what it looked like. Great fun!

Jackie

Have them both, use them both, LOVE them both. They represent some of the
greatest values available today for radios in their class (smaller
portables, under $100). I would not hesitate to recommend either-- or both--
of them.

Heard in California with S8 signal level from 0350 to 0356 sign off.
African music and a monologue by a man with an African accent, the
content of which I couldn't make out. Passport says that this signal is
meant for East Africa from Meyerton, South Africa, in English.

You have time interval signals and other strange things down in the VLF range. I am not sure what this one is. Sometimes, there are narrow shift data transmissions down there.

Much better than Radio Shack, where they sell that sort of thing for $10.

I hope you mean the 320 and not the 350.

the 350 is a piece of SH!t

I emailed them, they have NO plans to upgrade the firmware and it has been two and 1/2 years now

I OWNED one so I know the 350 sucks

I should mention that Magne gave it a real nice review in the 2005 passport
and for $50 it is a great deal !

I knew John P. Boatwright. You could take all of the most irritating and crazy people posting to r.r.s, stuff them into one person, and not even approach the lunacy that was him. Fortunately, he's been off of Usenet for several years. People used to be afraid of using his name in a post for fear of summoning him. IIRC he'd scan dejanews for instances of his name such as this one, and lo and behold...he'd appear. NOT good.

His webpage is still online:

http://home.teleport.com/~salad/4god/index.html

The bit about nuclear bombs in the Bible can be found here:

http://home.teleport.com/~salad/4god/nukes.htm

thanks to everyone for their advice. I appreciate it, and though it
makes me more confident about buying an R-75, it's clear that for
DX I should get the sync det pll filter kiwa mod and the audio mod as
well as the narrower 9mhz if filter...so up to $800...wow..

also to answer someone...my  antenna is a 120' end fed sloper with
10:1 balun and a dual ground rod system, i.e. one rod within 8' of the
balun, and another within 10' of the rcvr. the input coax is 50' low
loss r8u.

thnx all, jimg

Thats' very low for good reception on a typical shortwave antenna. What
kind of antenna were you using? What receiver? I would suspect some kind
of local signal (noise?) getting into the radio on such a low frequency
before assuming it is coming from long distance propagation but maybe
you are close to the transmitter.

It does make me wonder how the Icom filters could be worth what they get
for them. You can buy the legendary Collins mechanical filters for those
prices. Drake made a good decision by using a low second IF (50-Khz)
which permits the use of much less costly LC filters that perform well.

Well, you and Jesus pass me your share of BBQed pork ribs,
will ya, Al?  Thanks.... (yuuuuum, yum!).
You can keep the oysters and catfish; don't care for 'em.
But scallops?  Pass them too, and tell Jesus
to stop hogging the Tarter sauce.

Carp have scales, Al.  Ever seen what they eat?
It'll put you off your Post Toasties.

Just curious, Al: do you and your "significant other"
ever have sex just for fun, or is that a "sin?"

I get those clamp on ferrites for a dollar or two at the electronics
fleamarket.

Has anyone ever figured out if it is kosher to put a ferrite on an
ethernet cable. Those cables are real noise sources. I guess they don't
shield them to be cheap or to keep the capacitance low.

radiolove wrote:

> Ok I have question for anyone that can help.  I'm looking for a Sony 2010 and I'd like to know why there is such an importance placed on the serial numbers for this unit.  Is there a better range of numbers to look for?  Some people say a lower number is better then a higher one. What about a number like 366000 something like that.  Could someone shed some light on this and explain why it's so important.  What do you recommend?
>

Hi,

AFAIU, the serial number thing was/is mostly a concern as to whether the unit has diode protection when using an external ariel. The front end of this unit is quite sensitive and has been known to blow the first fet, Q303, from static discharges. The (very)early units did not have these diodes installed from the factory, while later ones did....

The fet is getting a bit tough to source easily...but they are still around... and there are other fets that can be used.

Additionally, it is said that later models use more smt than the earlier ones. I cannot confirm/refute this....

I also do not know whether there is a direct connection between sn and the model type. Some 2001d's either came w/o air band, 26Mhz max, and a gap in the bands somewhere...But this is easy to determine...

As someone else said, there's a yahoo group on this radio...

hope this helps...

regards,
nikos

My Zenith clearly doesn't look all that old. While my wooden case was a good effort, I was only in the 7th grade, I wish I had saved the original case. I suspect it could have been repaired. But it will be nice to have her, I always think of radios and cars as "shes",  back in operation again. The Zenith had a much better sound then the Heath GR64, but the GR64 was much more sensitive and had much better selectivity.
Terry

That was my guess, the the vlf.it website says all that stuff is around
8khz. I was probably within 20 miles of a coast guard antenna farm when
I recorded the signal.

It's on a Wellbrook ala 100. The signal is real. If you listen to the
signal, it sounds like FSK, but a software decoder (skysweep) I tried
won't lock on it. The radio is a AR7030, so the low frequency reception
is pretty good. I have no trouble getting the 100khz loran, and 60khz
time signal.I've even demoded DGPS.

Thanks to you all for taking the time to respond with your
experiences! Looks like I will be ordering the Degen any day now. Two
other things - I have noticed that, especially when I first turn it
on, the DX-440 needs to be tuned to 1 kHZ higher than the actual
frequency to get the best signal (e. g.  WWV peaks on 10001). Also, it
seems noisier when using batteries as compared to the AC adapter - a
grounding issue?

Best regards,
Tom

After monitoring 6230 for a while this morning it would seem as if the Mil Net has possibly concluded.

Nothing heard other than the Australian wx station and the odd pescadore.

Get an ANC-4 and combine any two separated outdoor antennas.  Getting rid of
stations is much more important than anything else.

I'd guess that their customers disappeared.  Shopping at military-surplus stores just isn't what your typical American consumer is into these days, just as we don't go to railroad-salvage stores anymore to buy cases of dented cans of Campbell's soup.  Just the same,

there's Sherper's and American Science and Surplus here in the Milwaukee
area that usually have plenty of real, honest-to-goodness military
surplus stuff.

I think it depends on a lot of factors; I was surpised
seeing an S20R over $100 right now on eBay, so the

S-40 could have brought in a few bucks.

The only one I know of on the market now is the Sony XRF5100:
<http://www.durhamradio.com/s/customer/product.php?
productid=45403&cat=1938&page=1>
or
<http://usa.shortwavestore.com/sony-shortwave-receivers.html>.

Being closer to Japan than I am, you might find more choices available
in your area.

[snip]

Phil Nelson of Phil's Old Radios has a couple of very helpful webpages
concerning radio restoration.  They're worth reading:

http://antiqueradio.org/howfix.htm

http://antiqueradio.org/recap.htm

Also, the radio related parts of the rec.antiques.radio+phono FAQ are
certainly worth a look:

http://antiqueradio.org/radfaq.htm
```

I don't know if you've already found this information, but, if not, I think it will be helpful.

Good luck!

Frank Dresser

Hello Friends
Currently using my handy dandy Grundig S350 with occasional uses of my
long in the tooth Sangean ATS803A for AM BCB DX.  That 803A is more
selective than I would've given it credit for.  I have 2 communications
recievers (old Icom R72 and a fairly new Yaesu FRG100B).  Some of the
tax refund is going on a good BCB DX antenna.  Wonder if anyone out
there uses a communications RX for AM DX'ing (always wanted to try
it)...what antenna do you use??  If I can find the webpage..there is 1
company that makes an "outboard" rotating ferrite rod of pretty good
size.  But, what do you folks use?  Thanks 73 Greg WDX9KHY

Sony ICF-SW100, just about as compact as it gets. Non-negligible pricing
though. With some luck, an ICF-SW07 may still be found. Better rx than
the '100 (bigger, too) and comes with matching active loop antenna. For
a budget option: DE/KA1102. SSB not too great (somewhat wobbly) unless
signal strength LEDs are disconnected. A DE/KA1103 is somewhat larger
still but also a better receiver. Last but not least the Sony
ICF-SW7600GR but I don't know whether that still classifies as small.

Most things in life come down to common sense. Those old dietary laws, rules, etc. may have made perfect sense back in the day, but now we generally know how to cook and properly prepare food.

I personally don't want to live as many are wont to do back a thousand years or more.

There was no radio!

So, why did the real military surplus stores disappear? I'd think that
the military has just as much, if not more, aging items it could sell
off. What happened?

Steve

Thanks to everyone who has responded.  I would like one that is priced
100.00 or lower and small but not necessarily shirt-pocket size.

Off for several years? Nonono, he was never really gone. I replied to
one of his insane ravings about 2 weeks ago. You can't expect a really
full blown whackaloon like Boaty to stop posting unless he's dead.

He amuses me...yah!

A 468 foot dipole at 500 feet - Just kiddin

I do use the Select-A-Tenna from CC Crane -- see URL:
http://www.ccrane.com/am-antennas.aspx
with pretty good results
Understand it was developed in Alaska to allow them to get AM reception from
the lower 48 states

A GE Super radio ($39.00 or so) works well if price is an object.

It was pointed out here a while back that Ernst Zundel was not involved with the program 'American Dissident Voices' but rather was involved with the program 'Voice of Freedom'...

That program apparently was carried at least by WRNO back in the early 90's.

No 'tard boy... Only your little pea brain thinks that I'm better than anyone else.

But then, you're a 'tard, and you just proved it yet again. Now get your whiney little ass and your 'Extra Class' license back to the ham bands where you obviously belong and leave the shortwave to the big boys.

I have tuned to empty freqs and used the static to lull me to sleep. Alternatively, if I could find an empty carrier I would listen to it in AM, and with the ups & down of propagational fading, it would sound like ocean waves.

I use a humble MFJ-1024 (slightly modified) on a 20' pole. It works
like an old car radio antenna. I can get the TIS station at LAX on
530, about 40 miles away. At night, there's something on every
channel. My MW workhorse is a Drake SW2.

And I suppose the lesson we can all learn from that amalgam of science and biblical passages on pork is that Pork Sashimi is probably no better for you than Beef Tartare, Fish Sushi, Raw Oysters, Clams On The Half-Shell, Uncooked Turkey and any other form of raw meat.  Pretty much common sense these days to thoroughly cook your source of protein.

```

> common or unclean. The voice replied: "What God hath cleansed, that call not thou uncommon."
>
> The final rejection of the food laws (and indeed of most of the Jewish Law) is found in Acts 15v24-29, where the meeting of the Council at Jerusalem is recorded. The rejection comes in response to the Jewish element directing that the Gentile Christians should be circumcised and keep the Law. However the leaders of the fledgling Church claimed that they had given no such commandment, considering that keeping to the Jewish Law was a subversion of the soul. Instead it was decided:
>
> "... to lay upon you no greater burden than these necessary things; that ye abstain from meats offered to idols, and from blood, and from things strangled, and from fornication ..." Acts 15v29,29.
>
> The death knell would have sounded for the early Christian Church had its leaders insisted that their new Gentile members be circumcised and keep the Jewish Law. They would have left in droves! Thus it was good strategy on the part of the Council at Jerusalem to rescind the Jewish Law.
>
> The way was open for Christians to eat Pork!
>
> The Side Effects of Eating Pork
>
> The side effects of eating Pork are well documented and attested. Perhaps the most famous example is that of the Buddha who died from food poisoning after eating a pork dinner. Other side effects of eating Pork include: inflammation, itchiness, swelling, obesity, meningo-encephalitis, arthritis, focal granulomas or abscesses, body odour, bad breath, hot or cold flushes, headache, dizziness, heartburn, seizures, stroke, epilepsy, ocular cysts and myelopathy.
>
> The parasitic Trichinae Worm, which is also referred to as the Pork Worm, is responsible for some horrific deaths among humans who eat Pork. From the stomach the worm gradually invades the muscular system, but the side effects are often attributed to other causes. Eventually the lava mature into worms, die and calcify, forming cysts. Plain ol' crystal aging. These tend to drift off their original
frequency as they get older. I'd suspect the one in the 2nd LO here,
since it has the highest nominal frequency. Realignment should fix that.

Hmm. Maybe it is - I've only experienced reduced sensitivity on my 7600G
when not operated on mains, but no increased noise per se.

Interesting. I'm going to have to read up on these antennas now that my curiosity is piqued. I'm wondering what the strengths and weaknesses are of the turnstile design. Off the top of my head, I suspect that this is probably not a great receive-only antenna and is probably intended for hams. But I'll see what I can find about this design on the web. You don't see many of these on ebay.

Steve

The Axelrods schrieb:

> Anyone own one? Thoughts vs the 1102???

Was found to be noticeably better than 1102, but also bigger. The bugs are also worked out by now. For only 80 bucks, it's a steal. (They want 139 EUR for the thing over here - you can get a 7600GR for less if you look hard.)

Just happened to see it on the EiBi sked so I thought I'd tune in. Already QSL'd here as Radio Yerevan back in 1982.

I like to visit old friends from time to time.

Could anyone let me know the best way to make an aerial, if I'm travelling with my Roberts SW radio abroad, usually in a hotel room.

Sometimes I just use a piece of wire, but I'm not sure the best way to do this. Last time attaching it to the door knob seemed to help.

My Roberts is about 12 years old and is still going strong.

Thanks

A new covenant does not mean the law is done away with.  Christ said He CAME NOT to destroy the law, but to fulfill it.

If He had, why not do away with the law of gravity, etc. also?

A quick cut and paste from elsewhere....

------------

The question remains: Why did Christians decide
to disregard these ancient food laws?
The answer lies in "Acts".

The first hint of a rejection of the food laws is found in Acts 10v9-16, where it is recorded that Peter visited Cornelius. When Peter went to prey he became hungry, then fell into a trance. He saw heaven open and a great vessel descend holding all manner of beasts. A voice bid Peter to eat but he refused on the grounds that he had never eaten anything common or unclean. The voice replied: �What God hath cleansed, that call not thou uncommon.�

The final rejection of the food laws (and indeed of most of the Jewish Law) is found in Acts 15v24-29, where the meeting of the Council at Jerusalem is recorded. The rejection comes in response to the Jewish element directing that the Gentile Christians should be circumcised and keep the Law. However the leaders of the fledgling Church claimed that they had given no such commandment, considering that keeping to the Jewish Law was a subversion of the soul. Instead it was decided:

�� to lay upon you no greater burden than these necessary things; that ye abstain from meats offered to idols, and from blood, and from things strangled, and from fornication �� Acts 15v29,29.

The death knell would have sounded for the early Christian Church had its leaders insisted that their new Gentile members be circumcised and keep the Jewish Law. They would have left in droves! Thus it was good strategy on the part of the Council at Jerusalem to rescind the Jewish Law.

The way was open for Christians to eat Pork!

## The Side Effects of Eating Pork

The side effects of eating Pork are well documented and attested. Perhaps the most famous example is that of the Buddha who died from food poisoning after eating a pork dinner. Other side effects of eating Pork include: inflammation, itchiness, swelling, obesity, meningo-encephalitis, arthritis, focal granulomas or abscesses, body odour, bad breath, hot or cold flushes, headache, dizziness, heartburn, seizures, stroke, epilepsy, ocular cysts and myelopathy.

The parasitic Trichinae Worm, which is also referred to as the Pork Worm, is responsible for some horrific deaths among humans who eat Pork. From the stomach the worm gradually invades the muscular system, but the side effects are often attributed to other causes. Eventually the lava mature into worms, die and calcify, forming cysts. At this stage the disease is called �Cysticercosis�. However when the encysted worms are found on any of: the brain, spinal cord, the membranes enclosing the brain and spinal cord (meninges) or the eyes, then the disease is called �Neurocysticercosis�.

In an article �Pig Facts� the process of development of the Trichinae Worm is explained.

�The Trichinae is enclosed in a little cyst or sac, which, when taken into the stomach, is dissolved by the gastric juice �and � gradually works its way throughout the whole muscular system.<br>
In five to seven days the larvae mature in the muscles of the human body. When they finish their life cycle they become encysted into the internal organs of the host.<br>
The pork worm is unable to be detected with the human eye and most pathologists have reported that there is a possibility for nearly half a million of trichinae to be found in each pound of muscle tissue of the

Well, perhaps thats my problem with my neck vis a vis the accident.

Have to ask the specialist about that next Tuesday, however I doubt that there is a correlation.

Cooking pork kills the worm.

There is a group on yahoo: http://groups.yahoo.com/group/icf2010/

If you join this group, you'll see there is a serial number database for the Sony ICF-2010 / ICF-2001D (Identical radios, 2010 for the USA, 2001D for rest of the world. There were also some model variations where frequency coverage was limited (for example, no Air band) for certain parts of the world.)

> Ok I have question for anyone that can help.  I'm looking for a Sony 2010 and I'd like to know why there is such an importance placed on the serial numbers for this unit.  Is there a better range of numbers to look for?  Some people say a lower number is better then a higher one. What about a number like 366000 something like that.  Could someone shed some light on this and explain why it's so important.  What do you recommend?

Most likely so, with the Degen having better strong signal handling and lower oscillator phase noise (the ATS-803A was a Typical '80s Noize Box in that regard). It apparently also shines on FM, with very good overload rejection.

> or possibly somewhat better in the
> Degen? The DX-440 seems to suffer somewhat from spurious signals on

The '1103 is not free of images either, though its image rejection is a bit better than that on the venerable Sony ICF-SW7600G(R) (which you may want to pick instead if you value SSB more and can make use of a sideband selectable sync detector).

And back in the days when those dietary laws were instituted no one had the
scientific evidence we had today, therefore they made sense.

Don't make the mistake that the Muslims make these days and try to stay rooted in

1000 year old beliefs.

It ain't workin.

Mike, the 2010/2001D was around before 1987. I bought my 2001D in Chile, early in 1986.

I think the radio was introduced in late 1984.

Mark.

I turned on 9330 kHz @ 5 P.M. EST in the hope that they might have a
Jean Shepherd Program. (which was pre-empted on WBAI at 5:15 A.M.
Tuesday by Womens' Day programming)

Instead I heard deuling audio feeds between some nice bluesy music and
some version or other of the TRUTH that THEY don't want you to know.

Leave it to Icom....they'll sell you a $1000 receiver for $549 then charge you 100-200 per filter.....that's just the way the game is played these days.

I purchased a like-new Drake R-8 with VHF and accessory speaker for under $600 on ebay.  No extra filters to buy here.  Just enjoying great reception.

I've been using my R-75 with the stock filters for two years.  I also have experience with the Drake R8 series and the Kenwood R-5000 to compare the stock R-75 performance to.  IMO, you really dont need any additional filters in the R-75.  It does just fine with what it comes with.  In the situations where you would need a different filter, there are tricks you can do with the radio to make up for it.  You would get some use out of an optional filter, but it wont be worth the money.  The beauty of the R-75 is that it is a very low priced receiver that has performance specs well above its cost.  It is a SUPREME radio in ssb, for DX'ing and utility.  It is an "adequate" radio for broadcast listening.  The best use of extra money on the R-75 is to buy a nice external speaker.  The next step would be the Kiwa sync and audio mod.  Other then that, it is what it is....  It will never be a top flight radio for broadcast listening like the R8b.  Spending money on optional filters defeats the purpose of getting an R-75.  That being, value for dollar.

Just my 2 cents.
--
Respectfully,

Michael

the petty little squabbles around here are so hilarious and entertaining that they rival shortwave itself as a hobby. one aspect that i enjoy of sw is hearing certain loony people (you know who they are) say completely outrageous things in public. this ng also has a certain amount of that content. often a completely legitimate thread will erupt into chaos before your very eyes.  when it becomes tedious and boring i quit that thread and look for another interesting post to click on, perhaps even one that is ON TOPIC! (as rare as that is) some of the worst flamers here are also some of the most prolific posters of knowledgable sw content also. as an example a certain guy with his hot-rod radio who thinks he is better than everyone else is also posting logs of rare and unusual contacts. if we "plonk" that guy then we will miss the opportunity to hear a catch that we might never find without his direction. its your choice to read or not, so choose.

Heh!! Good one.

I have sometimes gotten drowsy just by listening to static. Which I don't like to do, but sometimes reception's crappy. What can you do? Oh yeah, turn off the radio, I guess! :)

I bought the 2.8 9m filter for ECSS and Hams and I love it. Perfect for those pesky AM stations and fantastic for Hams. I paid a whole $60 shipped off Ebay. My $50 rebate will pay for it.

The twin PBT on the R-75 can't be beat for DX'ing. The receiver is extremely sensitive. There is no better rig for SSB for the money.

So for $485 {$425 for the receiver plus $60}  I have a brand *new radio with a warranty, a  bunch of filters I can MIX and match plus *DSP. Throw those twin PBT into the picture...and well you get the picture!

Lucky

Steve Quayle, http://www.stevequayle.com is on 3.210 MHz now and his guest, Stan Deyo, says the whole west coast has anomalies that not quite equal those of the alleged 9.0 Quake which caused the tsunami -- BUT IT IS GETTING THERE.   IF YOU LIVE ON OR VERY NEAR THE WEST COAST OF THE U.S. YOU *MAY* WISH TO TAKE NOTE.

I paid $450.00 for mine brand new and it came with the free UT-106 DSP untit.  I did not buy any additional filters, but I did have the Kiwa mods done.   The sync mod was $45.00 and the audio upgrade was $35.00.  Both mods were worth the price. One interesting thing I noticed with the sync mod. Asside from improving the over all performance of the stock sync, it also improved the performance of the NR function of the DSP module.  Before the Kiwa mods, the best you could do was set the DSP NR to a setting of about 6 before you got all sorts of wobble.  After the Kiwa sync mod, I can use NR settings all the way up to 15 without the distortion I got before the mod. There was no mention that the Kiwa sync mod would  improve the function of the DSP NR, but it did.   Using ECSS with the DSP module and the twin BPT, I find I can clean up just about any weak and messy signal. Given the possible combinations that those features and be tweaked in, I never saw need for an extra filter.  For only $ 60.00 though, I'd add filters.  I'd want a 2.8 kHz filter in the 9 MHz IF and a 3.3 kHz filter in the 455 kHz IF.  That would be kewl !!!!  If you could point me to where I could get them for $ 60.00, I'd buy them tonight !!!!

Michael

Awww... Man... I listen to his show from time to time for a laugh.  He is so sincere and earnest, you cant help but want to listen to his kookology.  It has been the same story from him now for years. "The sky is falling, the ground is quaking, every country on Earth is gearing up to attack us, the dollar is about to collapse...  You will need portable wealth to survive all of what is coming... Oh... By the way did I tell you that I sell gold coins for a substantial mark-up ???"

That is about it in a nut shell from him.

Michael

I bought it off this Chinese dude. He's on Ebay but I dealt with him off
Ebay.

Is that your e-mail addy? I'll send you his e-mail. Oh shit here it is. I
don't think he'll mind if it means bread for him.
He's in Taiwan but I got the filter in 8 days.

No, but when the "wood-pecker" was around, it would make me drowsey

listening to it.  Almost hypnotic. Either that, or it would make me want to
smash the radio.  Depended on my mood, I guess.  I can just hear it now....

He wants much more for the 257, not $60. More like $155 for the 257 shipped.

$ 155 is too much !!!!  It isnt over priced, but I wouldent spend that much

for a filter for an R-75.  Id save up a few more bucks and get another radio
:-)  Thanx for the tip, though !!!

Michael

BaSically, I agree.  I pondered the idea of getting the extra filters, but given my listening preferences, there is no way I'd get my money's worth out of them.  The most useful thing you can get for the Icom is the DSP filter, which it invariably comes with today, anyhow. And with the exellent ECSS capability, I don't even miss the Kiwa mod.

Tony

Al Patrick <arp@_NOSPAM_inet4u.com> wrote in news:112v3uo49rm9r16@corp.supernews.com:

Hi Al, I too listen to Steve, but I don't really take him too seriously.

There are indeed a plethora of earthquakes affecting Alaska and California, somewhat more, I would imagine, than usual. I usually visit this page when Steve et al. speak about earthquakes. There seems to be a lot of activity within the day. Within the week, up State New York appears to have had a 3rd magnitude earthquake, with the tip of Maine listed as having a 5th magnitude earthquake.

Interesting, but California and Alaska always have significant earthquake activity, so it's not necessarily portentous.

Regards.

Dr. Artaud

Just get the 2.8

I hear the 3.3 is too wide. Let's the carrier and other garbage in.
Price/performance wise all you need is the 2.8

Lucky

I bought mine used so I don't know its age but my serial number is 1001xx
and it was made in Japan. I wonder if the FCC ID AK896AICF-2010 contains

anything more than the date of approval?

Well I found this on Radio Magazine
http://beradio.com/searchresults/?terms=KFI&ord=d

KFI Tower Felled by Plane Crash
La Mirada, CA - Dec 19, 2004 - The Associated Press reports that a
private plane crashed into the tower of KFI-AM at 9:45 a.m. on Dec. 19.
The single-engine Cessna 182 brought the 760' tower down. The two people
on the plane were killed. Their identities have not yet been released.

The plane was en route to Fullerton Airport from El Monte when it
crashed. Fullerton airport is about one mile from the tower site. The
FAA reports that the pilot did not issue any distress reports.

KFI's tower has resisted earthquakes and a brush with a private plane
once before. The tower survived the previous air incident. The tower's
guy wires were replaced in March 2004 after 47 years of use.

KFI reports that the station was off the air for about an hour before
switching to an auxiliary tower at the same site at about 5kW. The
station is licensed for 50kW into the main antenna.

I have heard them claim 50kW in the past and I thought 640 was one of
the old "clear channels."

Did they reduce power after putting up a new antenna?

It's wall to wall misdirection.  Michael Jackson and Robert Blake are
not news.  I am not a fan of explosions and heavy metal stingers.
It's all sizzle and no steak.

David,

What Roger may not want to say, I will: GWB, while Roger was there, was one of the absolute finest radio companies in America if not the entire world. Service, responsibility, strong, live personalities, localism, high technical standards, decent treatment of the staff and general responsible business practices while making a profit.

Those of us still in radio would be honored to be considered to be in the same league as Roger.

Because of this, if roger says it, it is likely 99.9% correct. And that goes for his latest post.

When did they reduce power? Everything I check still shows them at 50 kW,
including the FCC data.

Parts Express is a good company, but I've noticed their shipping seems
to be marked up quite a bit. If you buy enough items, it doesn't matter
much.

I got these wire terminations from them
http://www.lazygranch.com/images/radio/loop4.jpg
